

Contents

	Introduction	vii
Chapter 1	Preliminaries	1
§1.1	One-dimensional linear thermoelasticity	1
§1.2	An energy integral	4
Chapter 2	The Coupled and Quasi-static Approximation	6
§2.1	An integro-differential equation	6
§2.2	Construction of solutions	7
§2.3	Failure of the Maximum Principle	11
§2.4	Behaviour of the kernel	16
§2.5	Initial sensitivity to the boundary	18
§2.6	A monotone property of the entropy	24
Chapter 3	Trigonometric Solutions of the Integro-differential Equation	29
§3.1	Maximum Principles for the pointwise mean total energy density and the pointwise mean square heat flux	29
§3.2	The effect of coupling on trigonometric solutions	32
Chapter 4	Approximation by Way of the Heat Equation or the Integro-differential Equation	42
§4.1	Status of the heat equation	42
§4.2	Comments on Theorem 13	44

§4.3	Proof of Theorem 13	45
§4.4	Mean and recurrence properties of the temperature	52
§4.5	Status of the integro-differential equation	55
Chapter 5	Maximum and Minimum Properties of the Temperature Within the Dynamic Theory	64
§5.1	Maximum and minimum properties with prescribed heat fluxes	64
§5.2	Maximum and minimum properties with prescribed temperatures	69
	References	79
	Subject Index	81
