Preface to Volumes 5a and 5b	ix

1. Scaling, Universality and Operator Algebras

LEO P. KADANOFF

Introductory Note	2
I. Critical Points and Thermodynamic Singularities	2
A. The Ising model	3
B. Other problems	6
C. Critical singularities	8
D. The importance of correlation functions	10
E. Droplet picture of correlation behaviour	10
II. Mean Field Theory	12
A. Results	12
B. Generalizations	15
C. Failure of mean field theory	15
III. The Roots of the Theory: Universality	16
A. Fields and operators	16
B. Statement of universality hypothesis	17
C. A simple example	18
D. Additional universality statements	19
IV. The Roots of the Theory: Scaling	20
A. The irrelevance of the length scale	20
B. A formal description of the length transformation	20
C. Fixed points	23
D. Deviations from the fixed point	24
E. Scaling results for the free energy	25
F. A simple example of the theory	26
V. Scale Transformations for Correlation Functions	28
A. General discussion	28
B. Formal theory	28
C. Connections with universality	31
D. Consequences	31
References	33

2. Generalized Landau Theories

MARSHALL LUBAN

I.	Introduction	35
II.	Uniform Magnetization	38
	A. Generalized Gibbs free energy	38
	B. Molecular field approximation	40
	C. Classical Landau theory	44
III.	Gibbs Free Energy Functional	46
IV.	Classical Landau Functional	49
	A. Thermodynamic properties	49
	B. Ginzburg criterion	54
V.	Generalized Landau Theories	55
	A. Free energy functional	57
	B. Equilibrium properties	58
	C. Josephson inequality	61
	D. Two-dimensional Ising model ($T < T_c$)	63
	E. Superfluid He^4	67
VI.	Time-Dependent Phenomena	71
	A. Landau-Khalatnikov theory	72
	B. Generalized time-dependent Landau theory	73
	C. Applications	75
	D. Propagating modes	78
VII.	Exact Results for Classical Functionals	81
	References	83

3. Neutron Scattering and Spatial Correlation near the Critical Point

JENS ALS-NIELSEN

I.	Introduction	88
II.	Theory of Critical Neutron Scattering	89
	A. Scattering cross section and spin correlations	89
	B. Response functions and spin correlations	92
	C. Notation in a uniform presentation of experimental results	95
III.	Experimental Methods in Critical Neutron Scattering	97
	A. The three-axis crystal spectrometer	97
	B. The two-axis spectrometer. The quasielastic approximation	99
	C. The resolution of crystal spectrometers	101
IV.	Three-Dimensional Ising Systems	105
	A. The order-disorder transition in beta-brass and the Ising model	105
	B. Results for beta-brass	109
	C. Comparison, beta-brass and the 3d-Ising model	118
	D. Other 3d-Ising systems	118
V.	Three-Dimensional Antiferromagnets— RbMnF_3 , MnF_2 , FeF_2	120
	A. Structure, exchange constants, anisotropy	120
	B. The isotropic Heisenberg antiferromagnet RbMnF_3	123
	C. The uniaxial antiferromagnets MnF_2 and FeF_2	129
VI.	Three-Dimensional Ferromagnets— EuO , EuS , Fe , Tb	135
	A. The Heisenberg ferromagnets EuO and EuS	136
	B. Critical fluctuations in iron	143
	C. Critical fluctuations in terbium	145

VII. One- and Two-Dimensional Magnetic Systems	147
A. The one-dimensional antiferromagnet $(CH_3)_4NMnCl_3$ (TMMC)	148
B. Two-dimensional antiferromagnets of K_2NiF_4 type	153
Acknowledgement	162
References	162

4. Mode Coupling and Critical Dynamics

KYOZI KAWASAKI

I. Introduction	166
II. Long Time Behaviour of Correlation Functions	171
III. Coupling Among Hydrodynamic Modes	175
A. Thermohydrodynamic derivation	176
B. Mode coupling expressed as equal time correlations of fluctuations	179
IV. Transport Coefficients	185
V. Kinetic Equations for Gross Variables	189
A. Isotropic Heisenberg ferromagnets	199
B. Isotropic Heisenberg antiferromagnets	205
C. Single component fluids	208
D. Binary fluid critical mixtures	213
VI. Time Correlation Functions of Gross Variables	216
VII. Strengths of Mode Coupling, Dynamical Scaling, and Transport Anomalies	236
A. Preliminaries	236
B. Illustrative examples of dynamical scaling	239
C. Validity of the dynamical scaling hypotheses and transport anomalies	257
VIII. Dynamical Behaviour near Critical Points	266
A. Dynamics of order parameters and related variables	267
B. Critical dynamics not involving order parameters directly	298
C. Validity of the approximate treatments of kinetic equations	329
IX. Attempts at Microscopic Theories	331
A. Application of quantum-field theoretical methods	331
B. Other approaches	335
X. Related Developments	336
XI. Concluding Remarks	343
Acknowledgements	344
Appendix A	345
Appendix B	352
Author Index	405
Subject Index	413
