Preface to Volume 13.....	ix

## 1 Asymptotic Analysis of Power-Series Expansions

A. J. GUTTMANN

1 Introduction.....	3
2 The ratio method.....	16
3 Sequence extrapolation.....	35
4 Padé approximants.....	51
5 The rational-approximant method and general inverse Padé approximants.....	75
6 Differential approximants.....	83
7 Analysis of series in more than one variable.....	105
8 Transformations.....	120
9 Applications to other areas.....	130
10 Summary and outlook.....	135
11 Programs for series analysis.....	138
Acknowledgements.....	228
References (with author index).....	229

## 2 Dimer Models on Anisotropic Lattices

JOHN F. NAGLE, CARLOS S. O. YOKOI and SAMENDRA M. BHATTACHARJEE

1 Introduction.....	236
2 Some two-dimensional dimer models.....	240
3 Special features of models with K-type transitions.....	247
4 Mathematical foundations of the transition behaviour.....	252

5 Results for thermodynamic properties .....	260
6 Correlation functions.....	271
7 Finite-size effects.....	273
8 Three-dimensional models.....	277
9 Application to biomembranes .....	280
10 Order parameter, anisotropic field, and application to monolayers.....	285
11 Application to $2 \times 1$ commensurate-incommensurate transitions.....	289
12 Concluding remarks.....	295
References (with author index).....	296
Subject Index.....	299
