PREFACE	xi
INTRODUCTION	1
CHAPTER 1. FUNDAMENTAL CONCEPTS	9
1.1. The Structure of a Physical Theory	9
1.2. Primitive Observers	12
1.3. The Classical Formulations of Thermodynamics	14
1.4. Systems and States	16
1.5. Relations between States	22
1.6. The Axioms	27
CHAPTER 2. FORMAL PROCESSES	30
2.1. Definitions and Axioms	30
2.2. Addition of Processes	32
2.3. Ordering of Processes	32
2.4. Further Properties of Processes	34
CHAPTER 3. COMPONENTS OF CONTENT	37
3.1. Definition	37
3.2. Existence of Components of Content	39
CHAPTER 4. IRREVERSIBILITY	41
4.1. Irreversibility Functions	41
4.2. The Construction of an Irreversibility Function	43
4.3. Irreversibility and Entropy	45
CHAPTER 5. MECHANICAL SYSTEMS AND ADIABATIC PROCESSES	48
5.1. Physical Considerations	48
5.2. Mechanical States and Processes	52
5.3. Adiabatic Processes	53
CHAPTER 6. ENTROPY	56
6.1. Entropy Functions	56
6.2. The Construction of an Entropy Function	57

<b>CHAPTER 7. TOPOLOGICAL CONSIDERATIONS</b>	<b>60</b>
7.1. Components of Content	60
7.2. Entropy	64
<b>CHAPTER 8. THERMODYNAMIC SPACE</b>	<b>72</b>
8.1. Definitions	72
8.2. The Case of Finite Dimension	74
8.3. Mathematical Commentary	77
<b>CHAPTER 9. EQUILIBRIUM STATES AND POTENTIAL</b>	<b>82</b>
9.1. Equilibrium States	82
9.2. Components of Potential	84
<b>CHAPTER 10. PERFECT EQUILIBRIUM STATES</b>	<b>90</b>
10.1. Motivation	90
10.2. Properties of Perfect Equilibrium States	91
10.3. Perfect Thermodynamic Systems	93
<b>CHAPTER 11. THERMODYNAMICS OF A RIGIDLY ENCLOSED SYSTEM</b>	<b>96</b>
11.1. General Discussion	96
11.2. A Pathological Example	101
11.3. The Construction of an Energy Function	105
11.4. The Construction of an Entropy Function	108
<b>CHAPTER 12. SYSTEMS OF VARIABLE VOLUME</b>	<b>112</b>
12.1. Volume and Pressure	112
12.2. Simple Systems	116
<b>CHAPTER 13. ELECTRIC AND MAGNETIC SYSTEMS</b>	<b>119</b>
13.1. Electrostatic Systems	119
13.2. Magnetic Systems	124
13.3. Hysteresis	126
<b>CHAPTER 14. GALILEAN THERMODYNAMICS</b>	<b>130</b>
14.1. The Components of Content	131
14.2. Galilean Transformations	134
14.3. The Equilibrium Surface	135
14.4. Properties of Equilibrium States	136
14.5. Thermodynamic Particles	137
14.6. Local Properties in an Equilibrium State	138
14.7. Some Special Cases	141
14.8. The Centrifugal Effect	144

<b>CHAPTER 15. SYMMETRY IN THERMODYNAMICS</b>	149
15.1. Introduction	149
15.2. The Principle of Equivalence	152
15.3. An Example	153
15.4. The Symmetry Group	155
15.5. The Transformation of States	157
15.6. The Transformation of Functions of State	159
<b>CHAPTER 16. SPECIAL RELATIVISTIC THERMODYNAMICS</b>	163
16.1. The Inhomogeneous Lorentz Group	164
16.2. The Components of Content	168
16.3. Rest Mass and Spin	171
16.4. The Representation of States in Space-Time	172
16.5. Centre of Mass and Spin Angular Momentum	173
16.6. The Transformation of Entropy	175
16.7. Equilibrium States and Temperature	177
16.8. Local Properties of an Equilibrium State	180
16.9. Conclusion	188
<b>APPENDIX A. THE FORMAL THEORY</b>	191
A.1. Notation	192
A.2. States and Processes	192
A.3. Components of Content	195
A.4. Quasi-Entropy	199
A.5. The Duality Principle	205
A.6. Boundedness	206
A.7. Equilibrium States	208
A.8. Potentials	210
A.9. Absolute Entropy	211
<b>APPENDIX B. SUBADDITIVE FUNCTIONS ON A GROUP</b>	215
B.1. Partially Ordered Sets	215
B.2. Subadditive Functions	216
B.3. The Extension Theorem	219
<b>APPENDIX C. THE PHYSICAL BASIS FOR THE ADJOINT REPRESENTATION</b>	223
C.1. The Case of Special Relativity	223
C.2. The General Case	226
