

CONTENTS

I. CLASSICAL THERMODYNAMICS OF MIXTURES

1.01. Introduction. Free Energy	1
1.02. Independent Variables	1
1.03. Thermodynamic Potentials and Fundamental Equations	2
1.04. Partial Molar Quantities	4
1.05. Chemical Potentials and Absolute Activities	5
1.06. Useful Formulae for Liquids and Solids	8
1.07. Activity Coefficients	9
1.08. Useful Formulae for Gases	11

II. STATISTICAL THERMODYNAMICS OF MIXTURES

2.01. Introduction. Independent Variables	13
2.02. Distribution Law and Partition Function.	13
2.03. Free Energy and Total Energy	14
2.04. Separation of Degrees of Freedom	15
2.05. Configurational Free Energy	15
2.06. Two Simple Examples	17
2.07. Characteristic of Macroscopic System	18
2.08. Grand Partition Function	19
2.09. Semi-grand Partition Functions	21

III. IDEAL SOLUTIONS

3.01. Sufficient Conditions for Ideality	23
3.02. Free Energy and Entropy of Mixing	25
3.03. Raoult's Law for Vapour Pressures	26
3.04. Osmotic Pressure	27
3.05. Several Components	28

IV. REGULAR SOLUTIONS

4.01. Sufficient Conditions for Regularity	29
4.02. Classification of Neighbouring Pairs	29
4.03. Nature of Crude Treatment (Zeroth Approximation)	30
4.04. Free Energy and Total Energy	30
4.05. Partial Pressures	32
4.06. Activity Coefficients	33
4.07. Separation into Two Phases	34
4.08. Critical Mixing	36
4.09. Nature of Quasi-chemical Treatment (First Approximation)	38
4.10. Total Energy and Free Energy	38
4.11. Partial Pressures and Activity Coefficients	39
4.12. Coexisting Phases. Critical Mixing	40
4.13. Relationship of Zeroth to First Approximation	42
4.14. Combinatory Formula	42
4.15. Maximization	44

4.16. Free Energy and Chemical Potentials	45
4.17. Description of Bethe's Method	46
4.18. Critique of Bethe's Method	48
4.19. Higher Approximations	49
4.20. System of Triangles	50
4.21. System of Tetrahedra	55
4.22. Comparison of Several Approximations	59
4.23. Expansions as Power Series in w/zkT	62
4.24. Power Series from Quasi-chemical Approximation	65
4.25. Temperature of Critical Mixing	68
4.26. Next-nearest Neighbours	70
4.27. Dependence of w on Temperature	78
4.28. Comparison with Experiment	81
4.29. Exact Treatment in Two Dimensions	86
V. DILUTE SOLUTIONS	
5.01. Definition of Diluteness	88
5.02. Dilute Regular Solution	88
5.03. Raoult's Law and Henry's Law	89
5.04. More General Treatment	89
5.05. Henry's Law and Nernst's Law	91
5.06. Raoult's Law	91
5.07. Osmotic Pressure	92
5.08. Heat of Dilution	92
5.09. Use of Mole Ratios. Molality Scale	93
VI. LATTICE IMPERFECTIONS	
6.01. Nature of Imperfections	95
6.02. Imperfections in a Single Salt	96
6.03. Impurities	98
VII. SUPERLATTICES	
7.01. Qualitative Description	101
7.02. Classification of Configurations	103
7.03. Configurational Energy	104
7.04. Determination of Equilibrium Properties	105
7.05. Crude Treatment (Zeroth Approximation)	106
7.06. Equilibrium State	107
7.07. Lambda Point	109
7.08. Degree of Order	109
7.09. Total Energy	110
7.10. Correlation between Superlattices and Regular Mixtures	111
7.11. First Approximation. Combinatory Formula	114
7.12. Maximization. Quasi-chemical Equation	115
7.13. Free Energy and Equilibrium State	115
7.14. Lambda Point	119
7.15. Expansion in Powers of w_s/zkT	120

7.16. Bethe's Method	122
7.17. Intercomparison of Methods	124
7.18. Anomalous Heat Capacity	126
7.19. Comparison with Experiment	128
7.20. AuCu ₃ Superlattice	130
7.21. Zeroth Approximation	130
7.22. Equilibrium Conditions	133
7.23. Total Energy	134
7.24. Degree of Order	135
7.25. First Approximation	136
7.26. Numerical Results	140
7.27. Comparison with Experiment	141
7.28. AuCu Superlattice	143
7.29. First Approximation	143
7.30. Numerical Results	143

VIII. GASEOUS MIXTURES

8.01. Introduction	144
8.02. Mixture of Perfect Gases	144
8.03. Single Pair of Interacting Molecules	146
8.04. Slightly Imperfect Real Gas	148
8.05. Virial Coefficients	150
8.06. Entropy, Total Energy, and Chemical Potentials	151
8.07. Change of Variable from V to P	151
8.08. Comparison with Perfect Gas. Fugacity	152
8.09. A Naïve Approximation	154
8.10. Corresponding States for Mixed Gases	154
8.11. Averaging Rules	158
8.12. Comparison with Experiment	158
8.13. Form of Molecular Interactions	161

IX. SURFACES OF SIMPLE LIQUID MIXTURES

9.01. Thermodynamics of Surface Phases	166
9.02. Example of Water and Ethyl Alcohol	169
9.03. Statistical Mechanics of Surface Layers	172
9.04. Quasi-crystalline Model	173
9.05. Formulae for Pure Liquids	174
9.06. Surface Layer of Mixture.	175
9.07. Grand Partition Function of Surface Layer	176
9.08. Ideal Solutions	176
9.09. Regular Solutions	177
9.10. Gibbs's Adsorption Formula and Further Simplification	179
9.11. Comparison with Experiment	181

X. MOLECULES OF DIFFERENT SIZES: ATHERMAL MIXTURES

10.01. Historical Introduction	183
10.02. Terminology and Notation	184

10.03. Relation of α to Absolute Activities	186
10.04. Relation of α to Free Energy of Mixing	187
10.05. Combinatory Formula	188
10.06. Dimers. Chang's Method	189
10.07. Dimers. Direct Method. . . .	192
10.08. Open Chain r -mers	193
10.09. Thermodynamic Properties	195
10.10. More than Two Components	196
10.11. Notation for Triangles and Tetrahedra	198
10.12. Triangular Trimers	198
10.13. Tetrahedral Tetramers	201
10.14. Nature of Approximation	204
10.15. Flory's Approximation	205
10.16. Numerical Values of Entropies of Mixing	206
10.17. Numerical Values of Activity Coefficients	207
10.18. Higher Approximation for Dimers	209
10.19. Relation to Experimental Material	213
 XI. MOLECULES OF DIFFERENT SIZES: MIXTURES NOT ATHERMAL	
11.01. Introduction	215
11.02. Crude Treatment (Zeroth Approximation)	216
11.03. Classification of Contacts. Total Energy	216
11.04. Free Energy	219
11.05. Absolute Activities and Fugacities	219
11.06. First Approximation. Combinatory Formula	220
11.07. Maximization. Quasi-chemical Equations	221
11.08. Absolute Activities. Free Energy	222
11.09. Total Energy	224
11.10. Critical Mixing	225
11.11. Relation of First Approximation to Zeroth Approximation	228
11.12. Flory's Approximation	229
11.13. Dependence of w on Temperature	230
11.14. Numerical Values for Activity Coefficients	232
11.15. Experiments on Benzene/Diphenyl	234
11.16. Experiments on Alkanes	239
 XII. SOLUTIONS OF MACROMOLECULES	
12.01. Introduction	243
12.02. Athermal Mixtures	244
12.03. Comparison with Experiment	247
12.04. Mixtures not Athermal	250
12.05. Comparison with Experiment	252
APPENDIX TO CHAPTER VII	259
INDEX OF AUTHORS	265
INDEX OF SUBJECTS	266
