Contents

Preface *vii*
Historical Introduction *ix*

Chapter 1 **Statistical Mechanical Preliminaries 1**

1-1 The Microscopic Description *3*
1-2 Relationship Between Microscopic and Macroscopic Descriptions *4*
1-3 The Gibbs Ensemble *5*
1-4 The Liouville Equation *6*
1-5 Proof of Liouville's Theorem *8*
References *9*
Problems *10*

Chapter 2 **Contraction of the Statistical Mechanical Description 13**

2-1 Reduced Distribution Functions *15*
2-2 Reduction of the First BBGKY Equation to the Boltzmann Equation *19*
2-3 The Moments of f *23*
2-4 The Hydrodynamical Equations *26*
References *27*
Problems *28*

Chapter 3 **Description of Binary Collisions 31**

3-1 General Formulation *33*
3-2 An Alternate Representation of the Collision Integral *38*
3-3 Hard Sphere Molecules *40*
3-4 General Intermolecular Potentials *41*
3-5 Power Law Potentials *45*
3-6 The Collision Cross Section *46*
References *50*
Problems *50*

Chapter 4 **Properties of the Collision Term 53**

4-1 Symmetry Properties of $J(f)$ *55*
4-2 The Summational Invariants *56*
4-3 The Linearized Collision Term, $L(g)$ *59*
4-4 An Alternate Representation of $L(g)$ *61*
4-5 The Eigentheory of $L(g)$ *62*
References *63*
Problems *64*

Chapter 5 **The *H* Theorem and Irreversibility 67**

5-1 Spatially Homogeneous Systems *69*
5-2 The *H* Theorem for a Nonuniform System *71*
5-3 Irreversibility and Boltzmann's Equation *74*
References *77*
Problems *77*

Chapter 6 **Normal Solutions of Boltzmann's Equation 79**

6-1 The Fredholm Theorems *81*
6-2 Hilbert's Uniqueness Theorem *82*
6-3 The Chapman–Enskog Procedure *86*
6-4 The First-Order Chapman–Enskog Solution *90*
6-5 The Second-Order Chapman–Enskog Solution *90*
6-6 Expressions for the Thermal Conductivity and Viscosity *93*
6-7 Calculation of the Transport Coefficients *96*
6-8 Validity of the Chapman–Enskog Results *99*
References *100*
Problems *101*

Chapter 7 **Moment Method Solutions 103**

7-1 Introduction *105*
7-2 Multidimensional Hermite Tensor Polynomials *106*
7-3 Maxwell's Moment Method *107*
7-4 Grad's Moment Method *109*
7-5 Some Applications of the Thirteen-Moment Equations *114*
7-6 Evaluation of the Collision Terms *116*
References *118*
Problems *118*

Chapter 8 **Model Boltzmann Equations 121**

8-1 The Simple BGK Model Equation *123*
8-2 Generalized Model Equations *126*
8-3 Some Other Model Equations *127*
References *129*
Problems *129*

Chapter 9 **Solutions of Special Problems 131**

9-1 Solutions of Boltzmann's Equation *133*
9-2 Boundary Conditions in Kinetic Theory *134*
9-3 Plane Poiseuille Flow *135*
9-4 The Density–Density Correlation Function *138*
9-5 Shock Wave Structure *140*
9-6 Half-Range Polynomial Expansions *144*
9-7 Couette Flow *151*
References *155*
Problems *157*

Chapter 10 **Gas Mixtures 161**

10-1 Description of Binary Mixtures *163*
10-2 Transport Phenomena in Mixtures *166*
10-3 Linearized and Model Boltzmann Equations *169*
10-4 The Boltzmann Fokker–Planck Equation *171*
References *174*
Problems *175*

Chapter 11 **Generalized Boltzmann Equations 177**

11-1 Introduction *179*
11-2 The Wang Chang–Uhlenbeck Equation *179*
11-3 Normal Solutions of the WCU Equation *182*

11-4 Model Equations for Structured Particles *184*
11-5 Enskog's Equation for Dense Gases *187*
11-6 A Boltzmann Equation for Traffic Flow *189*
References *190*
Problems *191*

Chapter 12 **Comparison of Theory with Experiment 195**

12-1 Transport Coefficients *197*
12-2 Special Flows *198*
12-3 The Distribution Function *202*
12-4 Computer Experiments *203*
References *205*

General References 209
Indexes 211
