Foreword.....	vii

Methods for Solving Linear Transport Problems. K. M. CASE

I. Introduction and Background.....	1
A. Introduction.....	1
B. Programme.....	7
C. Elements of the Theory of Generalized Functions.....	7
D. Summary of the Theory of Singular Integral Equations.....	16
II. Time-Dependent Plasma Problems.....	24
A. Normal Mode Expansion.....	24
B. A Completeness Theorem.....	24
C. Orthogonality Theorems.....	27
D. The Initial Value Problem.....	30
E. Constants of Motion.....	31
III. Boundary Value Problems in Plasmas.....	34
A. Normal Modes.....	34
B. An Application—Specular Reflection.....	37
C. More General Orthogonality and Completeness Properties.....	39
D. An Application—Diffuse Reflection.....	40
IV. Occurrence of Multiple Roots.....	43
V. Integral Formulations.....	47
A. Introduction.....	47
B. Integral Representations of the Kernels.....	48
C. The Replication Property.....	51
D. A Spectral Representation for the Density.....	52
E. Solution of the Equations.....	53
VI. Generalized Solutions of Certain Integral Equations.....	58
A. Introduction.....	58
B. Related Equations.....	59
C. Elementary Discussion of the Cases $\rho = 0$ and $\rho = 1$	59
D. The Case of General ρ	61

E. Evaluation of the Fundamental Solution.....	63
F. Solutions for Large Regions.....	66
G. Solutions for Small Regions.....	66
Appendix.....	69

Neutron Transport Theory. P. F. ZWEIFEL

I. The Transport Equation.....	73
II. Time-Dependent Case, Isotropic Scattering, Eigenfunctions and Eigenvalues, Orthogonality and Normalization.....	79
III. Typical Application of the Elementary Solution; Completeness... ..	85
IV. Further Remarks on One-Speed Transport Problems.....	90
A. Meaning of the Half-Range Expansion.....	90
B. The Emergent Angular Distribution.....	91
C. The Case $c = 1$	92
D. Anisotropic Scattering.....	93
V. Two Half-Space Problems, Slab Problems, and Time-Dependent Problems.....	95
A. Problems in Adjacent Half-Spaces.....	95
B. Slab Problems.....	97
C. Time-Dependent Problems.....	101
VI. Radiative Transfer in the Picket-Fence Model.....	102
References.....	111

Some Topics in Radiative Transfer. J. C. STEWART

I. Introduction.....	113
II. Scope of Radiative Transfer Theory.....	114
III. Radiative Transfer Equation; Basic Definitions: The LTE Hypothesis.....	116
IV. Remarks on LTE; Treatment of Non-LTE Problems.....	121

V. Neutron Counterpart of the LTE Hypothesis.....	124
VI. Some Representative Radiative-transfer Problems.....	125
A. Radiative-equilibrium Stellar Atmospheres.....	126
B. Planetary Atmospheres.....	130
C. Imprisonment of Resonance-line Radiation.....	133
D. Solar Illumination of the Deep Sea.....	135
E. Influence of Radiative Transfer on Shock-Wave Structure....	139
VII. Tractable Transfer Problems.....	141
VIII. Numerical Methods.....	145
References.....	147

Recent Developments in the Spherical Harmonics Method and New Integral Solutions of the Boltzmann Equation in Spherical Geometry.

W. KOFINK

Introduction.....	149
I. Recent Developments of the Spherical Harmonics Method in Neutron Transport Theory.....	150
A. Error Source Term.....	150
B. Necessary Number of Spherical Harmonics.....	154
C. Relations Between Spherical Harmonics and Gauss Quadrature Method.....	158
D. Error Source Term for the P_L Solution of the Milne Problem..	167
E. Justification of a Special Limit-process.....	170
F. The Angular Distribution in the Milne Problem.....	177
II. Integral Solutions of the Boltzmann Equation for Mono-energetic Neutrons Transport in Spherical Geometry.....	187
A. Boltzmann Transport Equation for Isotropic Scattering....	187
B. Regular and Singular Spherical Harmonic Solutions.....	188
C. Direct Solution by a Sonine Transformation.....	191
D. Some Theorems in the Realm of The Sonine Transformation.	194
E. Derivation of a Partial Solution with the Chosen Density....	196
F. A Quick Solution, which belongs to the Discrete Spectrum...	198
G. Description of a Singular Solution.....	200

H. Regular Solutions, which need not fulfil a Characteristic Equation	203
I. Regular Solutions in Spherical Geometry as Superpositions of Solutions in Plane Geometry	204
References	211

Plasmas. CARL OBERMAN

I. Introduction	213
II. Derivation of Plasma Equations from First Principles	217
III. Landau Problem, Stability (0-Order in ϵ)	221
IV. Kinetic Equation	228
V. High Frequency Conductivity and the Emission and Absorption Coefficient of a Fully Ionized Plasma	233
A. Background	233
B. Plasma Model and Derivation of Basic Equations	234
C. Thermal Equilibrium Ion Correlations	237
D. Limiting Forms	238
E. Emissivity	239
References	241

Transport Problems for Thermal Neutrons. IVAN KUŠČER

I. The Transport Equation	243
II. Scattering Laws	247
III. Eigenfunction Expansions	256
A. Formulation of the Problem	256
B. Standardized Eigenfunctions	258
C. Full-range Expansions	262
D. Half-range Expansions	265
E. The Separable Kernel	269
IV. Diffusion Parameters	269

A. The Diffusion Coefficient.....	269
B. The Thermal Diffusion Factor.....	273
C. The Diffusion Length	276
D. The K-Integrals.....	278
E. The Extrapolation Distance	279
V. The Reciprocity Theorem	281
A. General Formulation.....	281
B. Plane Geometry	284
C. Transmissivity of a Thick Non-Absorbing Slab.....	286
D. Asymptotic Solution of the Time-Dependent Albedo Problem for a Semi-infinite Medium.....	288
VI. Decay Times	290
A. Existence of a Continuous Spectrum.....	290
B. Decay Constants for an Infinite Medium	292
C. Finite Systems.....	296
References.....	298
