Preface	xiii
Nomenclature	xv
1 Foundations of Heat Transfer	1
1.1 Introductory Remarks	1
1.2 Modes of Heat Transfer	2
1.3 Continuum Concept	4
1.4 Definitions and Concepts in Thermodynamics	4
1.5 First Law of Thermodynamics	6
1.6 Second Law of Thermodynamics	10
1.7 Temperature Distribution	11
1.8 Fourier's Law of Heat Conduction	12
1.9 Thermal Conductivity	18
1.10 Newton's Cooling Law	20
1.11 Stefan-Boltzmann's Law of Radiation	22
References	25
Problems	26
2 General Heat Conduction Equation	29
2.1 Introduction	29
2.2 Derivation of General Heat Conduction Equation	29
2.3 Initial and Boundary Conditions	34
2.3.1 Initial Condition	36
2.3.2 Boundary Conditions	36
2.4 Temperature-Dependent Thermal Conductivity and Kirchhoff Transformation	40
References	41
Problems	42
3 One-Dimensional Steady-State Heat Conduction	45
3.1 Introduction	45
3.2 One-Dimensional Steady-State Heat Conduction without Heat Sources	45
3.2.1 Plane Wall	45
3.2.2 Conduction Through a Plane Wall from One Fluid to Another	50
3.2.3 Hollow Cylinder	51
3.2.4 Spherical Shells	53
3.2.5 Thermal Resistance Concept	55
3.2.6 Composite Plane Walls	56
3.2.7 Cylindrical Composite Walls	57
	vii

3.2.8	Overall Heat Transfer Coefficient	59
3.2.9	Thermal Contact and Scale Resistances	60
3.2.10	Biot Number	64
3.2.11	Critical Thickness of Cylindrical Insulation	65
3.3	One-Dimensional Steady-State Heat Conduction with Heat Sources	67
3.3.1	Plane Wall	68
3.3.2	Solid Cylinder	71
3.3.3	Effect of Cladding	74
3.4	Temperature-Dependent Thermal Conductivity	76
3.5	Space-Dependent Internal Energy Generation	79
3.6	Extended Surfaces-Fins and Spines	80
3.6.1	Extended Surfaces with Constant Cross-Sections	83
3.6.2	Rectangular Fin of Least Material	88
3.6.3	Performance Factors	90
3.6.4	Heat Transfer from a Finned Wall	91
3.6.5	Limit of Usefulness of Fins	93
3.6.6	Extended Surfaces with Variable Cross-Sections	94
	References	100
	Problems	102
4	Orthogonal Functions, Fourier Expansions, And Finite Fourier Transforms	109
4.1	Introduction	109
4.2	Characteristic-Value Problems	109
4.3	Orthogonal Functions	114
4.4	Sturm-Liouville Problem	115
4.5	Generalized Fourier Series and Generalized Finite Fourier Transform	118
4.6	Ordinary Fourier Series and Finite Fourier Transforms	119
4.6.1	Fourier Sine Series and Finite Fourier Sine Transform	121
4.6.2	Fourier Cosine Series and Finite Fourier Cosine Transform	123
4.7	Complete Fourier Series	128
4.8	Fourier-Bessel Series and Finite Hankel Transforms	129
	References	136
	Problems	137
5	Steady Two- and Three-Dimensional Heat Conduction Solutions with Separation of Variables	140
5.1	Introduction	140
5.2	Steady Two-Dimensional Problems in the Rectangular Coordinate System	140

5.2.1	Non-Homogeneity in Boundary Conditions	148
5.2.2	Non-Homogeneity in Differential Equations	152
5.3	Steady Two-Dimensional Problems in the Cylindrical Coordinate System	154
5.3.1	Steady Two-Dimensional Problems in (r, ϕ) Variables	155
5.3.2	Steady Two-Dimensional Problems in (r, z) Variables	160
5.4	Steady Two-Dimensional Problems in the Spherical Coordinate System	164
5.4.1	Legendre Polynomials	165
5.4.2	Fourier-Legendre Series	168
5.4.3	Solid Sphere	171
5.5	Steady Three-Dimensional Systems	174
5.6	Heat Transfer Rates	177
	References	179
	Problems	180
6	Unsteady Heat Conduction Solutions with Separation of Variables	190
6.1	Introduction	190
6.2	Lumped-Heat-Capacity Systems	192
6.3	One-Dimensional Distributed Systems	196
6.3.1	Cooling (or Heating) of an Infinite Flat Plate	199
6.3.2	Cooling (or Heating) of an Infinite Solid Cylinder	206
6.3.3	Cooling (or Heating) of a Solid Sphere	213
6.4	Multi-Dimensional Systems	218
6.4.1	Cooling (or Heating) of a Long Rectangular Bar	218
6.4.2	Cooling (or Heating) of a Parallelepiped and a Finite Cylinder	222
6.4.3	Semi-Infinite Body	224
6.4.4	Cooling (or Heating) of Semi-Infinite Cylinders, Bars and Plates	228
6.5	Periodic Surface Temperature Change	231
	References	237
	Problems	237
7	Solutions with Integral Transforms	244
7.1	Introduction	244
7.2	An Introductory Example	245
7.3	Finite Fourier Transforms	249
7.4	Fourier Transforms in the Semi-Infinite Interval	251
7.5	Unsteady-State Problems in Rectangular Coordinates	255
7.6	Steady Two- and Three-Dimensional Problems in Rectangular Coordinates	260
7.7	Hankel Transforms	263

7.8	Problems in Cylindrical Coordinates	266
7.9	Problems in Spherical Coordinates	270
7.10	Observations on the Method	272
	References	273
	Problems	274
8	Solutions with Laplace Transforms	277
8.1	Introduction	277
8.2	Definition of the Laplace Transform	277
8.3	An Introductory Example	279
8.4	Some Important Properties of Laplace Transforms	281
8.5	The Inverse Laplace Transform	283
	8.5.1 Method of Partial Fractions	284
	8.5.2 Convolution Theorem	288
8.6	Laplace Transforms and Heat Conduction Problems	289
8.7	Plane Wall	289
8.8	Semi-Infinite Solid	293
8.9	Solid Cylinder	296
8.10	Solid Sphere	298
	References	300
	Problems	300
9	Numerical Solutions	303
9.1	Introduction	303
9.2	Finite-Difference Approximation of Derivatives	304
9.3	Finite-Difference Formulation of Steady-State Problems in Rectangular Coordinates	306
9.4	Finite-Difference Approximation of Boundary Conditions	309
	9.4.1 Boundary with Convective Heat Transfer into a Medium at a Prescribed Temperature	309
	9.4.2 Insulated Boundary	310
9.5	Irregular Boundaries	311
9.6	Solution of Finite-Difference Equations	311
	9.6.1 Relaxation Method	312
	9.6.2 Matrix Inversion Method	314
	9.6.3 Gaussian Elimination Method	316
9.7	Finite-Difference Formulation of One-Dimensional Unsteady- State Problems in Rectangular Coordinates	317
	9.7.1 Explicit Method	318
	9.7.2 Implicit Method	323
	9.7.3 Crank-Nicolson Method	325
9.8	Finite-Difference Formulation of Two-Dimensional Unsteady- State Problems in Rectangular Coordinates	325
9.9	Finite-Difference Formulation of Problems in Cylindrical Coordinates	328

9.10	Errors in Finite-Difference Solutions	330
9.11	Convergence and Stability	332
9.12	Graphical Solutions	333
	References	336
	Problems	337
10	Further Methods of Solution	341
10.1	Introduction	341
10.2	Duhamel's Method	341
10.3	Integral Method of Formulation and Solution	344
	10.3.1 Problems with Temperature-Dependent Thermal Conductivity	349
	10.3.2 Non-Linear Boundary Conditions	352
	10.3.3 Plane Wall	354
	10.3.4 Problems with Cylindrical and Spherical Symmetry	355
10.4	Variational Formulation and Solution	356
	10.4.1 Basics of Variational Calculus	356
	10.4.2 Variational Formulation of Heat Conduction Problems	359
	10.4.3 Approximate Solutions by the Ritz Method	360
10.5	Problems Involving Phase Change	362
	10.5.1 Boundary Conditions at a Sharp Moving Interface	363
	10.5.2 Melting of a Solid with a Constant Surface Temperature—Exact Solution	364
	10.5.3 Melting of a Solid with a Constant Surface Temperature—Approximate Solution by the Integral Method	365
	References	367
	Problems	368
Appendix A:	Thermo-Physical Properties	371
Appendix B:	Bessel Functions	375
Appendix C:	Numerical Values of Error Function	387
