| Preface | vii |
| CHAPTER 1 Ensembles and Stochastic Processes | |
| 1.1. The Mechanical Description of Matter | 1 |
| 1.2. Macroscopic Descriptions and Contractions | 5 |
| 1.3. Stochastic Processes and Physical Ensembles | 7 |
| 1.4. Brownian Motion and the Wiener Process | 16 |
| 1.5. The Langevin Equation and Stochastic Integrals | 21 |
| 1.6. White Noise | 26 |
| 1.7. Solution of the Langevin Equation | 29 |
| 1.8. Ornstein–Uhlenbeck Processes | 33 |
| References | 41 |
| CHAPTER 2 Irreversible Processes: The Onsager and Boltzmann Pictures | |
| 2.1. Introduction | 42 |
| 2.2. The Linear Laws | 44 |
| 2.3. Entropy, Dissipation, Fluxes, and Forces | 47 |
| 2.4. The Hydrodynamic Level of Description | 52 |
| 2.5. Symmetry of the Two-Time Correlation Function and the Reciprocal Relations | 61 |
| 2.6. Fluctuations in the Onsager Theory | 66 |
| 2.7. The Boltzmann Equation | 69 |
| 2.8. The H -Theorem | 76 |
| 2.9. μ -Space Averages and the Maxwell Distribution | 78 |
| 2.10. Conservation Equations | 82 |
| 2.11. Uniting the Onsager and Boltzmann Pictures | 86 |
| References | 91 |
| CHAPTER 3 Elementary Processes and Fluctuations | |
| 3.1. Introduction | 92 |
| 3.2. The Stochastic Description of the Boltzmann Equation | 93 |
| 3.3. The Fluctuating Boltzmann Equation | 98 |
| 3.4. Elementary Chemical Reactions | 105 |
| 3.5. The Canonical Form | 109 |

| | |
|---|-----|
| 3.6. Stochastic Theory of Chemical Reactions at the Thermodynamic Level of Description | 114 |
| 3.7. Conservation Conditions and the Progress Variables | 119 |
| 3.8. Thermodynamics of Chemical Equilibria | 128 |
| References | 132 |
| CHAPTER 4 Mechanistic Statistical Theory of Nonequilibrium Thermodynamics..... | |
| 4.1. Introduction | 134 |
| 4.2. The Canonical Theory..... | 135 |
| 4.3. Solution of the Fokker–Planck Equation..... | 138 |
| 4.4. Fluctuations and Dissipation | 141 |
| 4.5. Thermodynamic Properties of the Canonical Theory..... | 148 |
| 4.6. Equivalence to the Onsager Theory at Equilibrium | 157 |
| 4.7. The Master Equation Formulation..... | 161 |
| 4.8. Stochastic Diffusion Processes | 169 |
| References | 175 |
| CHAPTER 5 Thermodynamic-Level Description of Chemical, Electrochemical, and Ion Transport Mechanisms..... | |
| 5.1. Ionic Conduction Noise in Solution | 177 |
| 5.2. The Feher–Weissman Experiment | 183 |
| 5.3. The General Linear Mechanism | 187 |
| 5.4. Bimolecular Isomerization | 194 |
| 5.5. Continuously Stirred Tank Reactors and Molecule Reservoirs | 199 |
| 5.6. Electrode Processes | 205 |
| 5.7. Fluctuations Caused by Electrochemical Reactions | 211 |
| 5.8. Ion Transport through Biological Membranes..... | 217 |
| 5.9. Simulation of Fluctuations | 228 |
| References | 234 |
| CHAPTER 6 The Hydrodynamic Level of Description | |
| 6.1. Diffusion in an Isotropic Medium | 235 |
| 6.2. Density Fluctuations Caused by Diffusion | 245 |
| 6.3. Heat Conduction and Thermal Diffusion | 256 |
| 6.4. Viscous Fluids: The Canonical Form | 262 |
| 6.5. Fluctuating Hydrodynamics | 269 |
| 6.6. Chemical Reactions and Diffusion | 275 |
| 6.7. Quasi-elastic Scattering Theory | 283 |
| 6.8. Light Scattering in a Thermal Gradient | 288 |
| 6.9. Local versus Nonlocal Fluctuations | 297 |
| References | 305 |
| CHAPTER 7 Nonequilibrium Steady States | |
| 7.1. Steady-State Ensembles | 307 |
| 7.2. Stability of Steady States | 311 |
| 7.3. Fluctuations at Steady States | 320 |

| | |
|---|------------|
| 7.4. Multiple Steady States in Chemically Reactive Systems | 327 |
| 7.5. Critical Points | 337 |
| 7.6. The Gunn Effect | 343 |
| References | 351 |
| | |
| CHAPTER 8 Thermodynamics and the Stability of Steady States | 353 |
| 8.1. The Thermodynamic Stability of Equilibrium | 353 |
| 8.2. Fluctuations and Stability at Steady States | 362 |
| 8.3. Thermodynamic Functions at Steady State | 371 |
| 8.4. Thermodynamic Properties of Steady States | 381 |
| 8.5. Free Energy and the Electromotive Force | 387 |
| 8.6. The Nonequilibrium EMF in a Stirred Tank Reactor | 390 |
| References | 396 |
| | |
| CHAPTER 9 Hierarchies and Contractions of the Description | 397 |
| 9.1. Introduction | 397 |
| 9.2. Contractions without Memory | 398 |
| 9.3. Contraction of Stationary, Gaussian, Markov Processes | 408 |
| 9.4. Derivation of the Hydrodynamic Level of Description from the Boltzmann Level | 416 |
| 9.5. Evaluation of Transport Coefficients | 425 |
| 9.6. Rate Constants for Rapid Bimolecular Chemical Reactions | 435 |
| References | 447 |
| | |
| CHAPTER 10 Nonstationary Processes: Transients, Limit Cycles, and Chaotic Trajectories | 449 |
| 10.1. Introduction | 449 |
| 10.2. Nonstationary Systems and Nonlinear Transients | 450 |
| 10.3. Limit Cycle Oscillations | 460 |
| 10.4. Fluctuations on Limit Cycles | 470 |
| 10.5. Chaotic Trajectories | 474 |
| 10.6. Chaos in Complex Systems | 479 |
| 10.7. Molecular Fluctuations versus Deterministic Chaos | 490 |
| References | 493 |
| | |
| Index | 495 |
