PREFACE	ix
ON MATHEMATICAL SYMBOLS	xv
1. INTRODUCTION	1
1.1. Distinction of kinetic theory	1
1.2. Main problems	7
2. THE LIOUVILLE EQUATION	13
2.1. Dynamics of $N$ particles	13
2.2. The Liouville equation	20
2.3. Solutions of the Liouville equation	22
2.4. Distribution functions of subsystems and their evolution	29
2.5. Distribution functions in generic phase spaces	35
Exercises	36
<b>PART I. Gases in Moderate States</b>	
3. THE BBGKY HIERARCHY	41
3.1. Introductory remarks	41
3.2. The symmetry assumption of distribution functions in the microscopic sense	44
3.3. The symmetry of distribution functions in time average and the derivation of the BBGKY hierarchy	48
3.4. Physical implications of the BBGKY hierarchy	55
	v

## CONTENTS

3.5. The symmetry assumption of distribution functions in ensemble average	59
Exercises	63
4. THE BOLTZMANN EQUATION	65
4.1. Introduction	65
4.2. Necessary assumptions	68
4.3. Derivation	70
4.4. Physical implications of the Boltzmann equation	78
Exercises	87
5. THE DERIVATION OF THE NAVIER-STOKES EQUATIONS	88
5.1. Equations of moments	88
5.2. The Chapman-Enskog theory	91
5.3. An integral equation equivalent to the Boltzmann equation and its application	96
5.4. The macroscopic variables of a gas on the surface of a wall	105
Exercises	108
 <b>PART II. Rarefied Gases</b>	
6. ASSUMPTION NECESSARY FOR THE DERIVATION OF THE NAVIER-STOKES EQUATIONS	111
6.1. Introductory remarks	111
6.2. The criterion of the convergence of the Chapman-Enskog series	113
6.3. Simple application of the criterion	116
Exercises	117
7. KINETIC-THEORETICAL CHARACTERISTICS OF DYNAMICS OF RAREFIED GASES	118
7.1. Distribution function near a wall	118
7.2. Boundary conditions of moments	123
7.3. Usage of boundary condition of moments	131

## CONTENTS

7.4. Approaches developed for rarefied gas dynamics	143
7.5. Free molecule flow	149
Exercises	154

### PART III. Ionized Gases

8. DIFFICULTIES IN KINETIC THEORY APPLIED TO CHARGED PARTICLES	159
8.1. Introductory remarks	159
8.2. The Fokker–Planck presentation of the Boltzmann integral for weak interactions	160
8.3. Divergence of the Boltzmann integral of collision due to the Coulomb force	164
8.4. The cause of the divergence of the Boltzmann col- lision integral	167
8.5. The difficulty in the BBGKY hierarchy	173
8.6. The Vlasov equation	174
Exercises	178
9. KINETIC EQUATIONS FOR IONIZED GASES	179
9.1. General scheme	179
9.2. The probability of two particles being their mutual nearest neighbors	183
9.3. Separation of particles in pairs of mutual nearest neighbors	186
9.4. Model (scheme of approximation) I	188
9.5. Model (scheme of approximation) II	208
9.6. Model (scheme of approximation) III	211
9.7. Remarks on the difficulties in real systems	215
Exercises	216

## CONTENTS

CONCLUDING REMARKS	217
APPENDICES	
A. The Boltzmann Collision Integral	221
A.1. Dynamics of two-particle interaction	221
A.2. Moments of the collision integral	230
A.3. The Bhatnagar–Gross–Krook model	233
B. Difficulties in the Usual Derivations of the Boltzmann Equation	238
C. Kinetic Theories which are not Based on the BBGKY Hierarchy	244
D. A Mathematical Theorem	249
E. Quantum-mechanical Systems	251
F. On the Definition of Distinguishability or of Indistinguishability of Similar Particles in Statistical Mechanics and in Kinetic Theory	255
G. An Historical Sketch of Kinetic Theory	261
REFERENCES	279
NAME INDEX	285
SUBJECT INDEX	289
Other Titles in the Series	297
