

CONTENTS

INTRODUCTION.

THEORY OF VECTORS.

ART.	PAGE
1. Definition of a Vector	1
2. Addition of Vectors	2
3. Multiplication by Scalars	5
4. Geometrical Applications	6
5. Parallel Projection of Vectors	7
<i>Examples I</i>	9

CHAPTER I.

STATICS OF A PARTICLE.

6. Preliminary Notions	12
7. Composition of Forces	13
8. Analytical Method	15
9. Equilibrium under Constraint. Friction.	17
10. Equilibrium of a System of Particles	19
11. The Funicular Polygon	22
12. The Parabolic Funicular	23
<i>Examples II</i>	25

CHAPTER II.

PLANE KINEMATICS OF A RIGID BODY.

13. Degrees of Freedom	29
14. Centre of Rotation	30
15. Instantaneous Centre	30
16. Pole-Curves	33
17. Relative Motion. Theorem of the Three Centres	36
<i>Examples III</i>	37

CHAPTER III.

PLANE STATICS.

ART.	PAGE
18. Fundamental Postulates	39
19. Concurrent and Parallel Forces	41
20. Theorem of Moments	43
21. Reduction of a Plane System of Forces	45
22. Parallel Forces. Centre of Gravity.	47
23. Conditions of Equilibrium	48
24. Theory of Couples	52
25. Determinate and Indeterminate Statical Problems.	53
26. Equilibrium of Jointed Structures	55
27. Shearing Force and Bending Moment in a Beam	57
28. Continuous Load	60
29. Sliding Friction.	62
30. Friction at a Pivot. Rolling Friction	64
<i>Examples</i> IV, V, VI, VII	67, 68, 71, 73

CHAPTER IV.

GRAPHICAL STATICS.

31. Force-Diagram and Funicular Polygon	77
32. Graphical Reduction of a Plane System of Forces.	78
33. Properties of the Funicular Polygon	80
34. Reciprocal Figures	82
35. Parallel Forces	84
36. Bending Moments	85
37. Continuous Load	89
<i>Examples</i> VIII	90

CHAPTER V.

THEORY OF FRAMES.

38. Condition for Rigidity	93
39. Determinateness of Stresses	95
40. Graphical Determination of Stresses	96
41. Maxwell's Method	98
42. Further Examples. Parallel Forces	100
43. Reciprocal Figures	102
44. Method of Sections	103
45. Method of Interchange	104
46. Case of External Forces acting on the Bars	106
<i>Examples</i> IX	108

CHAPTER VI.

WORK AND ENERGY.

ART.		PAGE
47.	Work of Forces on a Particle	111
48.	Principle of Virtual Velocities	112
49.	Potential Energy	115
50.	Application to a System of Particles	118
51.	Work of a Force on a Rigid Body	121
52.	Principle of Virtual Velocities for a Rigid Body	122
53.	Extension to a System of Rigid Bodies	124
54.	Application to Frames	127
55.	Critical Forms	129
56.	Self-stressed Frames	130
57.	Potential Energy of a Mechanical System	132
58.	Stability of Equilibrium	134
59.	Rocking Stones	135
	<i>Examples X, XI</i>	137, 139

CHAPTER VII.

ANALYTICAL STATICS.

60.	Analytical Reduction of a Plane System of Forces	142
61.	Conditions of Equilibrium	143
62.	Virtual Velocities	144
63.	Scalar and Vector Products	145
	<i>Examples XII</i>	147

CHAPTER VIII.

THEORY OF MASS-SYSTEMS.

64.	Centre of Mass	150
65.	Centre of Gravity	152
66.	Formulæ for Mass-Centre	153
67.	Continuous Distributions. Simple Cases	155
68.	Integral Formulæ	156
69.	Theorems of Pappus	159
70.	Quadratic Moments	160
71.	Two-Dimensional Examples	161
72.	Three-Dimensional Problems	163
73.	Comparison of Quadratic Moments with respect to Parallel Planes or Axes	164
74.	Lagrange's Theorems	165
75.	Moments of Inertia of a Plane Distribution. Central Ellipse	167
76.	Transformation by Parallel Projection	171

ART.		PAGE
77.	Properties of the Central Ellipse	173
78.	Equipomental Systems	174
79.	Graphical Determination of Linear and Quadratic Moments.	174
	<i>Examples XIII, XIV, XV</i>	176, 178, 180

CHAPTER IX.

FLEXIBLE CHAINS.

80.	Tangential and Normal Resolution	182
81.	String under Constraint. Friction	183
82.	Constrained Chain subject to Gravity	184
83.	Chain hanging freely	185
84.	Properties of the Uniform Catenary	188
85.	Wire stretched nearly horizontal	190
86.	Parabolic Catenary	191
87.	Catenary of Uniform Strength.	192
88.	Law of Density for a prescribed Form	194
	<i>Examples XVI</i>	195

CHAPTER X.

LAWS OF FLUID PRESSURE.

89.	Density, and Specific Gravity	199
90.	Stress in a Fluid	200
91.	Uniformity of Pressure-Intensity about a Point	201
92.	Fluid subject to Gravity. Conditions for Equilibrium	204
93.	Resultant Pressure on a Plane Area. Centre of Pressure	206
94.	Formulæ for Centre of Pressure	208
95.	Centre of Pressure and Central Ellipse	209
96.	Pressures on Curved Surfaces	211
97.	Work of Fluid Pressure. Potential Energy of a Liquid	213
	<i>Examples XVII, XVIII</i>	215, 217

CHAPTER XI.

EQUILIBRIUM OF FLOATING BODIES.

98.	Principle of Archimedes. Buoyancy	219
99.	Conditions of Equilibrium of a Floating Body	220
100.	Body floating under Constraint	224
101.	Stability of a Floating Body. Vertical Displacements	224
102.	Angular Displacements. Metacentre	225
103.	Formula for Metacentre	226
104.	Factor of Stability. Variation with Draught.	230
105.	Resultant Pressure of a Liquid in a Tank	230

ART.		PAGE
106.	Curves of Floatation and Buoyancy. Dupin's Theorems	231
107.	The various Positions of Equilibrium of a Floating Body. Stability	233
108.	Curvature of Curves of Floatation and Buoyancy	235
109.	Stability for Finite Displacements. Metacentric Evolute	237
110.	Energy of a Floating Body	238
	<i>Examples XIX</i>	240

CHAPTER XII.

GENERAL CONDITIONS OF EQUILIBRIUM OF A FLUID.

111.	General Formula for Pressure-Gradient	244
112.	Surfaces of Equal Pressure. Equipotential Surfaces	245
113.	Moving Liquid in Relative Equilibrium	246
114.	Rotating Liquid	247
	<i>Examples XX</i>	250

CHAPTER XIII.

EQUILIBRIUM OF GASEOUS FLUIDS.

115.	Laws of Gases	252
116.	Mixture of Gases	253
117.	Indicator Diagram. Isothermal and Adiabatic Lines	254
118.	Work done in Expansion. Elasticity	257
119.	Law of Pressure in Isothermal Atmosphere	260
120.	Atmosphere in Convective Equilibrium	261
121.	Compressibility of Liquids	263
	<i>Examples XXI, XXII</i>	264, 267

CHAPTER XIV.

CAPILLARITY.

122.	Hypothesis of Surface Tension	269
123.	Superficial Energy	270
124.	Discontinuity of Pressure.	271
125.	Angle of Contact	273
126.	Elevation or Depression of a Liquid in a Capillary Tube	274
127.	The Capillary Curve	275
128.	Soap-films. Minimal Surfaces	281
129.	Soap-films symmetrical about an Axis	283
130.	Cohesion	286
131.	Intrinsic Pressure	287
132.	Influence of Curvature of the Surface	288
	<i>Examples XXIII</i>	289

CHAPTER XV.
STRAINS AND STRESSES.

ART.	PAGE
133. Introduction	291
134. Homogeneous Strain	292
135. Simple types of Strain. Uniform Extension, Shear	293
136. Homogeneous Stress. Simple types	296
137. Stress-Strain Relations. Young's Modulus. Poisson's Ratio	297
138. General Stress-Strain Relations in an Isotropic Substance	298
139. Potential Energy of a Strained Elastic Solid	301
<i>Examples XXIV</i>	302

CHAPTER XVI.
EXTENSION OF BARS.

140. Extension of Bars	304
141. Deformation of Frames	305
142. Reciprocal Theorem	308
143. Stresses in an Over-Rigid Frame	309
144. Principle of Least Energy	312
<i>Examples XXV</i>	314

CHAPTER XVII.
FLEXURE AND TORSION OF BARS.

145. Uniform Flexure	315
146. Varying Flexure of a Beam	318
147. Examples of Concentrated Load	319
148. Continuous Loads	322
149. Continuous Beams. Theorem of Three Moments	325
150. Combined Flexure and Extension	327
151. Finite Flexure of a Rod	328
152. Flexure of a Curved Bar	330
153. Collapse of a Ring under Pressure	334
154. Torsion of a Bar of Circular Section	336
<i>Examples XXVI</i>	338

CHAPTER XVIII.
STRESSES IN CYLINDRICAL AND SPHERICAL SHELLS.

155. Stresses in Thin Shells	341
156. Thick Spherical Shell	342
157. Thick Cylindrical Shell	344
158. Compound Cylindrical Shells. Initial Stress	346
159. Stresses in a Rotating Disk	347
160. Rotating Shaft	349
<i>Examples XXVII</i>	350
<i>Examples XXVIII</i>	351
INDEX	355
