

CONTENTS

I. THE BASIC PRINCIPLES OF STATISTICAL PHYSICS

| | <i>Page</i> |
|---|-------------|
| 1. Statistical distribution | 1 |
| 2. Statistical independence | 5 |
| 3. Liouville's theorem | 9 |
| 4. The role of energy | 10 |
| 5. The statistical matrix | 13 |
| 6. The statistical distribution in quantum statistics | 19 |
| 7. Entropy | 22 |
| 8. The law of increase of entropy | 28 |

II. THERMODYNAMIC QUANTITIES

| | |
|---|----|
| 9. Temperature | 32 |
| 10. Macroscopic motion | 34 |
| 11. Adiabatic processes | 36 |
| 12. Pressure | 39 |
| 13. Work and quantity of heat | 42 |
| 14. The heat function | 44 |
| 15. The free energy and thermodynamic potential. | 45 |
| 16. Relations between the derivatives of thermodynamic quantities | 48 |
| 17. The thermodynamic scale of temperature | 52 |
| 18. The Joule-Thomson process | 53 |
| 19. Maximum work | 55 |
| 20. The maximum work done by a body in an external medium | 57 |
| 21. The thermodynamic inequalities | 60 |
| 22. Le Chatelier's principle | 63 |
| 23. Nernst's theorem | 66 |
| 24. The dependence of thermodynamic quantities on the number of particles | 68 |
| 25. The equilibrium of a body in an external field | 71 |
| 26. Rotating bodies | 72 |
| 27. Thermodynamic relations in the relativistic region | 75 |

III. THE GIBBS DISTRIBUTION

| | |
|---|-----|
| 28. The Gibbs distribution | 78 |
| 29. The Maxwell distribution | 81 |
| 30. The probability distribution for an oscillator | 86 |
| 31. The free energy in the Gibbs distribution | 89 |
| 32. Thermodynamic perturbation theory | 93 |
| 33. Expansion in powers of \hbar | 96 |
| 34. The Gibbs distribution for rotating bodies | 103 |
| 35. The Gibbs distribution for a variable number of particles | 105 |
| 36. The deduction of the thermodynamic identity from the Gibbs distribution | 107 |

IV. THE PERFECT GAS

| | |
|--|-----|
| 37. The Boltzmann distribution | 110 |
| 38. The Boltzmann distribution in classical statistics | 112 |
| 39. The collision of molecules | 114 |
| 40. The perfect gas not in equilibrium | 116 |

| | <i>Page</i> |
|--|-------------|
| 41. The free energy of a perfect Boltzmann gas | 119 |
| 42. The equation of state of the perfect gas | 120 |
| 43. Perfect gas with constant specific heat | 124 |
| 44. The law of equipartition | 129 |
| 45. The perfect monatomic gas | 132 |
| 46. The monatomic gas: influence of electronic angular momentum | 134 |
| 47. The diatomic gas with molecules of different atoms: rotation of molecules | 136 |
| 48. The diatomic gas with molecules composed of identical atoms: rotation of molecules | 140 |
| 49. The diatomic gas: vibration of the atoms | 143 |
| 50. The diatomic gas: influence of the electronic angular momentum | 146 |
| 51. The polyatomic gas | 148 |

V. THE FERMI AND BOSE DISTRIBUTIONS

| | |
|--|-----|
| 52. The Fermi distribution | 152 |
| 53. The Bose distribution | 153 |
| 54. Non-equilibrium Fermi and Bose gases | 154 |
| 55. Fermi and Bose gases of elementary particles | 156 |
| 56. The degenerate electron gas | 160 |
| 57. The specific heat of the degenerate electron gas | 162 |
| 58. The relativistic degenerate electron gas | 165 |
| 59. The degenerate Bose gas | 168 |
| 60. Black-body radiation | 171 |

VI. CONDENSED BODIES

| | |
|---|-----|
| 61. Solids: low temperatures | 180 |
| 62. Solids: high temperatures | 184 |
| 63. The Debye interpolation formula | 187 |
| 64. The thermal expansion of solids | 190 |
| 65. Phonons | 192 |
| 66. Quantum liquid: Bose type spectrum | 198 |
| 67. Superfluidity | 202 |
| 68. Quantum liquid: Fermi type spectrum | 207 |
| 69. The electronic spectra of solid dielectrics | 213 |
| 70. Negative temperatures | 215 |

VII. REAL GASES

| | |
|---|-----|
| 71. Deviations of gases from perfect behaviour | 219 |
| 72. Expansion in powers of the density | 224 |
| 73. Van der Waals' equation | 226 |
| 74. The completely ionised gas | 229 |
| 75. Quantum-mechanical calculation of the virial coefficients | 236 |
| 76. The degenerate "nearly perfect" gas | 240 |

VIII. PHASE EQUILIBRIUM

| | |
|--|-----|
| 77. The conditions for phase equilibrium | 253 |
| 78. The Clausius-Clapeyron equation | 257 |
| 79. The critical point | 259 |
| 80. The thermodynamic inequalities at the critical point | 263 |
| 81. Properties of a substance near the critical point | 264 |
| 82. The law of corresponding states | 268 |

IX. SOLUTIONS

| | <i>Page</i> |
|---|-------------|
| 83. Systems of different particles | 271 |
| 84. The phase rule | 272 |
| 85. Weak solutions | 273 |
| 86. Osmotic pressure | 275 |
| 87. Phases of the solvent in contact | 277 |
| 88. Equilibrium with respect to the solute | 280 |
| 89. Evolution of heat and change of volume in the process of solution | 281 |
| 90. Mutual influence of solutes | 284 |
| 91. Solutions of strong electrolytes | 286 |
| 92. Mixtures of perfect gases | 288 |
| 93. Isotopic mixtures | 291 |
| 94. Vapour pressure of a concentrated solution | 293 |
| 95. Thermodynamic inequalities for solutions | 295 |
| 96. Equilibrium curves | 300 |
| 97. Examples of state diagrams | 305 |
| 98. The intersection of the special lines of the equilibrium surface | 310 |
| 99. Liquid and gas | 311 |

X. CHEMICAL REACTIONS

| | |
|--|-----|
| 100. Conditions for chemical equilibrium | 315 |
| 101. The law of mass action | 316 |
| 102. Heat of reaction | 319 |
| 103. Ionisation equilibrium | 322 |

XI. THE PROPERTIES OF MATTER AT VERY HIGH TEMPERATURES AND DENSITIES

| | |
|--|-----|
| 104. Equilibrium with respect to pair production | 325 |
| 105. The equation of state for very dense matter | 327 |
| 106. The equilibrium of bodies of large mass | 330 |
| 107. The energy of a gravitating body | 337 |
| 108. The equilibrium of a "neutron sphere" | 340 |

XII. FLUCTUATIONS

| | |
|--|-----|
| 109. The Gaussian distribution | 344 |
| 110. The Gaussian distribution for several quantities | 346 |
| 111. Fluctuations of the basic thermodynamic quantities | 350 |
| 112. Fluctuations in a perfect gas | 357 |
| 113. Poisson's Formula | 359 |
| 114. Fluctuations in solutions | 361 |
| 115. Correlation of fluctuations | 363 |
| 116. Fluctuations at the critical point | 366 |
| 117. Correlation of fluctuations in a perfect gas | 369 |
| 118. Correlation of fluctuations in time | 374 |
| 119. The symmetry of the kinetic coefficients | 379 |
| 120. The dissipative function | 384 |
| 121. Correlation in time of the fluctuations of several quantities | 387 |
| 122. Generalised susceptibility | 391 |
| 123. Non-thermodynamic fluctuations of one quantity | 398 |
| 124. Non-thermodynamic fluctuations of several quantities | 403 |

XIII. THE SYMMETRY OF MACROSCOPIC BODIES

| | <i>Page</i> |
|---|-------------|
| 125. Symmetry of the configuration of the particles in a body | 409 |
| 126. Symmetry with respect to the orientation of molecules | 412 |
| 127. The symmetry elements of a crystal lattice | 413 |
| 128. The Bravais lattice | 414 |
| 129. Crystalline systems | 416 |
| 130. Crystal classes | 420 |
| 131. Space groups | 422 |
| 132. The reciprocal lattice | 424 |
| 133. Other types of symmetry of macroscopic bodies | 426 |

XIV. SECOND-ORDER PHASE TRANSITIONS

| | |
|--|-----|
| 134. Second-order phase transitions | 430 |
| 135. The discontinuity in the specific heat | 434 |
| 136. Change of symmetry in a second-order phase transition | 439 |
| 137. Irreducible representations of the space groups | 446 |
| 138. Critical and isolated points of a continuous transition | 452 |

XV. SURFACES

| | |
|---|-----|
| 139. Surface tension | 457 |
| 140. The surface tension of crystals | 460 |
| 141. Surface pressure | 463 |
| 142. Surface tension of solutions | 465 |
| 143. Surface tension in solutions of strong electrolytes | 467 |
| 144. Adsorption | 469 |
| 145. Angle of contact | 471 |
| 146. Liquid film on a solid surface | 473 |
| 147. The creation of nuclei | 474 |
| 148. Fluctuations in the curvature of long molecules | 478 |
| 149. The impossibility of the existence of phases in a one-dimensional system | 482 |
