Preface xix

1 THE LIOUVILLE EQUATION 1

1.1 Elements of Classical Mechanics, 3

- 1.1.1 *Generalized Coordinates and the Lagrangian*, 3
- 1.1.2 *Hamilton's Equations*, 5
- 1.1.3 *Constants of the Motion*, 7
- 1.1.4 *Γ -space*, 8
- 1.1.5 *Dynamic Reversibility*, 10
- 1.1.6 *Equation of Motion for Dynamical Variables*, 11

1.2 Canonical Transformations, 12

- 1.2.1 *Generating Functions*, 12
- 1.2.2 *Generating Other Transformations*, 14
- 1.2.3 *Canonical Invariants*, 15
- 1.2.4 *Group Property of Canonical Transformations*, 16

1.3 Liouville Theorem, 17

- 1.3.1 *Proof*, 17
- 1.3.2 *Geometric Significance*, 18
- 1.3.3 *Action Generates the Motion*, 18

1.4 Liouville Equation, 19

- 1.4.1 *The Ensemble: Density in Phase Space*, 19
- 1.4.2 *First Interpretation of $D(q, p, t)$* , 19
- 1.4.3 *Most General Solution: Second Interpretation of $D(q, p, t)$* , 21
- 1.4.4 *Incompressible Ensemble*, 22
- 1.4.5 *Method of Characteristics*, 23
- 1.4.6 *Solutions to the Initial-value Problem*, 24
- 1.4.7 *Liouville Operator*, 26

1.5 Eigenfunction Expansions and the Resolvent, 28

- 1.5.1 *Liouville Equation Integrating Factor*, 28
- 1.5.2 *Example: The Ideal Gas*, 29

1.5.3	<i>Free-particle Propagator</i> , 31
1.5.4	<i>The Resolvent</i> , 31
1.6	Distribution Functions , 33
1.6.1	<i>Third Interpretation of $D(q, p, t)$</i> , 33
1.6.2	<i>Joint-probability Distribution</i> , 35
1.6.3	<i>Reduced Distributions</i> , 36
1.6.4	<i>Conditional Distribution</i> , 36
1.6.5	<i>s-Tuple Distribution</i> , 37
1.6.6	<i>Symmetric Properties of Distributions</i> , 38
1.7	Markov Process , 40
1.7.1	<i>Two-time Distributions</i> , 40
1.7.2	<i>Chapman–Kolmogorov Equation</i> , 40
1.7.3	<i>Homogeneous Processes in Time</i> , 41
1.7.4	<i>Master Equation</i> , 41
1.8	Central-limit Theorem , 45
1.8.1	<i>Random Variables and the Characteristic Function</i> , 45
1.8.2	<i>Expectation, Variance, and the Characteristic Function</i> , 45
1.8.3	<i>Sums of Random Variables</i> , 47
1.8.4	<i>Application to Random Walk</i> , 48
1.8.5	<i>Large n Limit: Central-limit Theorem</i> , 51
1.8.6	<i>Random Walk in Large n Limit</i> , 53
1.8.7	<i>Poisson and Gaussian Distributions</i> , 55
1.8.8	<i>Covariance and Autocorrelation Functions</i> , 57

Problems, 57

Topical Problems

1.22	<i>Generalized Potentials</i> , 62
1.27	<i>Difference and Diffusion Equations</i> , 64
1.29	<i>Integral Invariants of Poincaré</i> , 65
1.39	<i>Classical Field Dynamics and the Sine–Gordon Equation</i> , 67
1.40	<i>Chebyshev’s Inequality</i> , 68
1.42	<i>Translationally and Rotationally Invariant Distributions</i> , 69
1.45	<i>Separatrix: Homoclinic and Heteroclinic Orbits</i> , 70
1.47	<i>N-dimensional dynamics</i> , 71

2 ANALYSES OF THE LIOUVILLE EQUATION 72

2.1 BBKGY Hierarchy, 74

2.1.1	<i>Liouville, Kinetic Energy, and Remainder Operators</i> , 74
2.1.2	<i>Reduction of the Liouville Equation</i> , 76
2.1.3	<i>Further Symmetry Reductions</i> , 77
2.1.4	<i>Conservation of Energy from BY_1 and BY_2</i> , 79

2.2	Correlation Expansions: The Vlasov Limit, 82
2.2.1	<i>Nondimensionalization, 82</i>
2.2.2	<i>Correlation Functions, 84</i>
2.2.3	<i>The Vlasov Limit, 86</i>
2.2.4	<i>The Vlasov Equation: Self-consistent Solution, 87</i>
2.2.5	<i>Debye Distance and the Vlasov Limit, 91</i>
2.2.6	<i>Radial Distribution Function, 91</i>
2.3	Diagrams: Prigogine Analysis, 93
2.3.1	<i>Perturbation Liouville Operator, 93</i>
2.3.2	<i>Generalized Fourier Series, 94</i>
2.3.3	<i>Interpretation of a_l Coefficients, 95</i>
2.3.4	<i>Equations of Motion for $a_{(k)}$ Coefficients, 97</i>
2.3.5	<i>Selection Rules for Matrix Elements, 98</i>
2.3.6	<i>Properties of Diagrams, 99</i>
2.3.7	<i>Long-time Diagrams: The Boltzmann Equation, 102</i>
2.3.8	<i>Reduction of Time Integrals, 103</i>
2.3.9	<i>Application of Diagrams to Plasmas, 107</i>
2.4	Bogoliubov Hypothesis, 109
2.4.1	<i>Time and Length Intervals, 109</i>
2.4.2	<i>The Three Temporal Stages, 110</i>
2.4.3	<i>Bogoliubov Distributions, 111</i>
2.4.4	<i>Density Expansion, 112</i>
2.4.5	<i>Construction of $F_2^{(0)}$, 113</i>
2.4.6	<i>Derivation of the Boltzmann Equation, 116</i>
2.5	Klimontovich Picture, 118
2.5.1	<i>Phase Densities, 118</i>
2.5.2	<i>Phase Density Averages, 119</i>
2.5.3	<i>Relation to Correlation Functions, 120</i>
2.5.4	<i>Equation of Motion, 121</i>
2.6	Grad's Analysis, 121
2.6.1	<i>Liouville Equation Revisited, 121</i>
2.6.2	<i>Truncated Distributions, 122</i>
2.6.3	<i>Grad's First and Second Equations, 123</i>
2.6.4	<i>The Boltzmann Equation, 124</i>
	Problems, 125
	<i>Topical Problems</i>
2.1	<i>Antinormalization Properties for Correlation Functions, 125</i>
2.7	<i>Metric Spaces, 127</i>
2.12	<i>Equation of State for Rigid Spheres, 127</i>
2.14	<i>Zeros of the Total Correlation Function, 127</i>
2.17	<i>Lie Derivative, 128</i>
2.20	<i>Symmetry of the Distribution Function, 129</i>

3 THE BOLTZMANN EQUATION, FLUID DYNAMICS, AND IRREVERSIBILITY 130

3.1 Scattering Concepts, 133

- 3.1.1 Separation of the Hamiltonian, 133**
- 3.1.2 Scattering Angle, 136**
- 3.1.3 Cross Section, 138**
- 3.1.4 Kinematics, 141**

3.2 The Boltzmann Equation, 144

- 3.2.1 Collisional Parameters and Derivation, 144**
- 3.2.2 Multicomponent Gas, 147**
- 3.2.3 Representation of Collision Integral for Rigid Spheres, 148**

3.3 Fluid Dynamic Equations and Boltzmann \mathcal{H} Theorem, 150

- 3.3.1 Collisional Invariants, 150**
- 3.3.2 Macroscopic Variables and Conservation Equations, 151**
- 3.3.3 Conservation Equations and the Boltzmann Equation, 153**
- 3.3.4 Temperature: Variance of the Velocity Distribution, 155**
- 3.3.5 Irreversibility, 157**
- 3.3.6 Poincaré Recurrence Theorem, 157**
- 3.3.7 Boltzmann and Gibbs Entropies, 158**
- 3.3.8 Boltzmann's \mathcal{H} Theorem, 160**
- 3.3.9 Statistical Balance, 162**
- 3.3.10 The Maxwellian, 162**
- 3.3.11 The Barometer Formula, 165**
- 3.3.12 Central-limit Theorem Revisited, 166**

3.4 Transport Coefficients, 168

- 3.4.1 Response to Gradient Perturbations, 168**
- 3.4.2 Elementary Mean-free-path Estimates, 172**
- 3.4.3 Diffusion and Random Walk, 180**
- 3.4.4 Autocorrelation Functions, Transport Coefficients, and Kubo Formula, 181**

3.5 The Chapman–Enskog Expansion, 187

- 3.5.1 Collision Frequency, 187**
- 3.5.2 The Expansion, 188**
- 3.5.3 Second-order Solution, 191**
- 3.5.4 Thermal Conductivity and Stress Tensor, 194**
- 3.5.5 Sonine Polynomials, 196**
- 3.5.6 Application to Rigid Spheres, 199**
- 3.5.7 Diffusion and Electrical Conductivity, 200**
- 3.5.8 Expressions of $\Omega^{(l,q)}$ for Inverse Power Interaction Forces, 201**

- 3.5.9 *Interaction Models and Experimental Values*, 203
 - 3.5.10 *The Method of Moments*, 204
- 3.6 The Linear Boltzmann Collision Operator, 208
- 3.6.1 *Symmetry of the Kernel*, 208
 - 3.6.2 *Negative Eigenvalues*, 210
 - 3.6.3 *Comparison of Boltzmann and Liouville Operators*, 211
 - 3.6.4 *Hard and Soft Potentials*, 211
 - 3.6.5 *Maxwell Molecule Spectrum*, 212
 - 3.6.6 *Further Spectral Properties*, 213
- 3.7 The Druyvesteyn Distribution, 216
- 3.7.1 *Basic Parameters and Starting Equations*, 216
 - 3.7.2 *Legendre Polynomial Expansion*, 219
 - 3.7.3 *Reduction of $\hat{J}_0(f_0 \mid F)$* , 222
 - 3.7.4 *Evaluation of I_0 and I_1 Integrals*, 224
 - 3.7.5 *Druyvesteyn Equation*, 227
 - 3.7.6 *Normalization, Velocity Shift, and Electrical Conductivity*, 228
- 3.8 Further Remarks on Irreversibility, 231
- 3.8.1 *Ergodic Flow*, 231
 - 3.8.2 *Mixing Flow and Coarse Graining*, 234
 - 3.8.3 *Action-angle Variables*, 236
 - 3.8.4 *Hamilton-Jacobi Equation*, 238
 - 3.8.5 *Conditionally Periodic Motion and Classical Degeneracy*, 240
 - 3.8.6 *Brun's Theorem*, 243
 - 3.8.7 *Anharmonic Oscillator*, 244
 - 3.8.8 *Resonant Domains and the KAM Theorem*, 245
- Problems, 248
- Topical Problems*
- 3.1 *Effective Potential*, 248
 - 3.4 *Group Property of Time-displacement Operators*, 248
 - 3.5 *Viscosity of Liquid D_2* , 249
 - 3.7 *Generating Function for Sonine Polynomials*, 249
 - 3.16 *Coarse-grained Entropy*, 251
 - 3.18 *Two-dimensional Harmonic Oscillator*, 252
 - 3.20 *Motion in a Spherical Cavity*, 254
 - 3.44 *Generalized Pressure Tensor*, 258
 - 3.48 *Entropy-Enthalpy Equations of Motion*, 260
 - 3.50 *Reversibility of Integral Expressions*, 261
 - 3.54 *Dynamics of Rough and Smooth Spheres*, 262
 - 3.55 *Application of KAM Theorem*, 263

4 ASSORTED KINETIC EQUATIONS WITH APPLICATIONS TO PLASMAS AND NEUTRAL FLUIDS 266

- 4.1 Application of the Vlasov Equation to a Plasma, 268
 - 4.1.1 *Debye Potential and Dielectric Constant*, 268
 - 4.1.2 *Waves, Instabilities, and Damping*, 274
 - 4.1.3 *Landau Damping*, 276
 - 4.1.4 *Nyquist Criterion*, 280
- 4.2 Further Kinetic Equations of Plasmas and Neutral Fluids, 282
 - 4.2.1 *Krook–Bhatnager–Gross Equation*, 283
 - 4.2.2 *KBG Analysis of Shock Waves*, 286
 - 4.2.3 *The Fokker–Planck Equation*, 289
 - 4.2.4 *The Landau Equation*, 294
 - 4.2.5 *The Balescu–Lenard Equation*, 297
 - 4.2.6 *Convergent Kinetic Equation*, 302
 - 4.2.7 *Fokker–Planck Equation Revisited*, 304
- 4.3 Monte Carlo Analysis in Kinetic Theory, 306
 - 4.3.1 *Master Equation*, 306
 - 4.3.2 *Equivalence of Master and Integral Equations*, 307
 - 4.3.3 *Interpretation of Terms*, 308
 - 4.3.4 *Application of Random Numbers*, 309
 - 4.3.5 *Program for Evaluation of Distribution Function*, 311

Problems, 312

Topical Problems

- 4.6 *H Theorem for KBG Equation*, 313
- 4.16 *Electric-field Autocorrelation Tensor*, 314

5 ELEMENTS OF QUANTUM KINETIC THEORY 316

- 5.1 Basic Principles, 318
 - 5.1.1 *The Wave Function and Its Properties*, 318
 - 5.1.2 *Commutators and Measurement*, 320
 - 5.1.3 *Representations*, 322
 - 5.1.4 *Coordinate and Momentum Representations*, 323
 - 5.1.5 *Superposition Principle*, 325
 - 5.1.6 *Statistics and the Pauli Principle*, 327
 - 5.1.7 *Heisenberg Picture*, 328
- 5.2 The Density Matrix, 329
 - 5.2.1 *The Density Operator*, 330
 - 5.2.2 *The Pauli Equation*, 334
 - 5.2.3 *The Wigner Distribution*, 338

5.2.4	<i>Weyl Correspondence</i> , 341
5.2.5	<i>Wigner–Moyal Equation</i> , 344
5.2.6	<i>Homogeneous Limit: Pauli Equation Revisited</i> , 346
5.3	Application of the KBG Equation to Quantum Systems, 350
5.3.1	<i>Equilibrium Distributions</i> , 350
5.3.2	<i>Photon Kinetic Equation</i> , 353
5.3.3	<i>Electron Transport in Metals</i> , 355
5.3.4	<i>Thomas–Fermi Screening</i> , 361
5.3.5	<i>Mott Transition</i> , 363
5.3.6	<i>Relaxation Time for Charge Carrier Phonon Interaction</i> , 367
5.4	Quantum Modifications of the Boltzmann Equation, 370
5.4.1	<i>Quasi-classical Boltzmann Equation</i> , 370
5.4.2	<i>Kinetic Theory for Excitations in a Fermi Liquid</i> , 372
5.4.3	<i>H Theorem for Quasi-classical Distribution</i> , 379
5.5	Overview of Classical and Quantum Hierarchies, 379
5.5.1	<i>Second Quantization and Fock Space</i> , 379
5.5.2	<i>Classical and Quantum Distribution Functions</i> , 380
5.5.3	<i>Equations of Motion</i> , 383
5.5.4	<i>Generalized Hierarchies</i> , 384
5.6	Kubo Formula Revisited, 387
5.6.1	<i>Charge Density and Current</i> , 387
5.6.2	<i>Identifications for Kubo Formula</i> , 388
5.6.3	<i>Electrical Conductivity</i> , 389
5.6.4	<i>Reduction to Drude Conductivity</i> , 391
5.7	Elements of the Green’s Function Formalism, 391
5.7.1	<i>Schroedinger Equation Green’s Function</i> , 392
5.7.2	<i>The s-Body Green’s Function</i> , 392
5.7.3	<i>Averages and the Green’s Function</i> , 394
5.7.4	<i>The Quasi-free Particle</i> , 396
5.7.5	<i>One-body Green’s Function</i> , 397
5.7.6	<i>Retarded and Advanced Green’s Functions</i> , 398
5.7.7	<i>Coupled Green’s Function Equations</i> , 399
5.7.8	<i>Diagrams and Expansion Techniques</i> , 400
5.8	Spectral Function for Electron–Phonon Interactions, 404
5.8.1	<i>Hamiltonian</i> , 404
5.8.2	<i>Green’s Function Equations of Motion</i> , 405
5.8.3	<i>The Spectral Function</i> , 407
5.8.4	<i>Lorentzian Form</i> , 409
5.8.5	<i>Lifetime and Energy of a Quasi-free Particle</i> , 411

Problems, 412

Topical Problems

- 5.1 *Integration of Heisenberg's Equations of Motion, 412*
- 5.4 *Density Matrix for Spinors in a Pure State, 413*
- 5.10 *Electrical Conductivity in Terms of Mean-free Path, 414*
- 5.17 *Partition Function, 415*
- 5.18 *Two-dimensional Gas of Spin $\frac{1}{2}$ Fermions, 416*
- 5.19 *Uncertainty Relation for a Mixed State, 417*
- 5.20 *Uncertainty Relation and the Wigner Distribution Function, 417*
- 5.23 *Wigner Distribution and Classical Trajectories, 418*
- 5.28 *Density Matrix for Free and Confined Particles, 420*
- 5.36 *Composite Bosons, 421*
- 5.43 *Velocity Autocorrelation Function in Terms of the Two-particle Green's Function, 423*
- 5.44 *Variational Solution, 424*

6 RELATIVISTIC KINETIC THEORY 428

6.1 Preliminaries, 429

- 6.1.1 *Postulates, 429*
- 6.1.2 *Events, World Lines, and the Light Cone, 430*
- 6.1.3 *Four-Vectors, 430*
- 6.1.4 *Lorentz Transformation, 432*
- 6.1.5 *Length Contraction, Time Dilation, and Proper Time, 433*
- 6.1.6 *Covariance, Hamiltonian, and Hamilton's Equations, 434*
- 6.1.7 *Criterion for Relativistic Analysis, 435*

6.2 Covariant Kinetic Formulation, 435

- 6.2.1 *Distribution Function, 435*
- 6.2.2 *One-particle Liouville Equation, 436*
- 6.2.3 *Covariant Electrodynamics, 437*
- 6.2.4 *Vlasov Equation, 439*
- 6.2.5 *Covariant Drude Formulation of Ohm's Law, 439*
- 6.2.6 *Lorentz Invariants in Kinetic Theory, 441*
- 6.2.7 *Relativistic Electron Gas and Darwin Lagrangian, 443*

6.3 The Relativistic Maxwellian, 447

- 6.3.1 *Normalization, 447*
- 6.3.2 *The Nonrelativistic Domain, 448*

6.4 Non-Cartesian Coordinates, 449

- 6.4.1 *Covariant and Contravariant Vectors, 449*
- 6.4.2 *Metric Tensor, 450*
- 6.4.3 *Lagrange's Equations, 451*

6.4.4	<i>The Christoffel Symbol</i> , 452
6.4.5	<i>Liouville Equation</i> , 453
Problems, 454	
<i>Topical Problems</i>	
6.2	<i>Group Property of Lorentz Transformations</i> , 454
6.12	<i>Consistency of Relativistic Kinetic Theory</i> , 456
6.16	<i>Relativistic Doppler Effect</i> , 456
6.19	<i>Single-particle Relativistic Lagrangian</i> , 456
6.21	<i>Black Hole and Schwarzschild Metric</i> , 456
6.24	<i>Mandelstam Variables</i> , 457
