<b>Authors</b>	v
<b>Preface</b>	vii
<b>1 The laws of thermodynamics (P.T.Landsberg)</b>	1
Mathematical preliminaries	1
Quasistatic changes	4
The First Law	6
The Second Law	9
Simple ideal fluids	11
Joule-Thomson effect	21
Thermodynamic cycles	23
Chemical thermodynamics	28
The Third Law	33
Phase changes	34
Thermal and mechanical stability	37
<b>2 Statistical theory of information and of ensembles (P.T.Landsberg)</b>	44
Entropy maximisation: ensembles	44
Partition functions in general	48
Entropy maximisation: probability distributions	51
Most probable distribution method	53
Some general principles	60
<b>3 Statistical mechanics of ideal systems (P.T.Landsberg)</b>	63
Maxwell distribution	63
Classical statistical mechanics	67
Virial theorem	72
Oscillators and phonons	74
The ideal quantum gas	80
Constant pressure ensembles	92
Radiative emission and absorption	93
<b>4 Ideal classical gases of polyatomic molecules (C.J.Wormald)</b>	98
The translational partition function	98
Thermodynamic properties and the theory of fluctuations	100
The classical rotational partition function	103
The quantum mechanical rotational partition function	105
A convenient formula for the high temperature rotational partition function	108
Thermodynamic properties arising from simple harmonic mode <sup>r</sup> of vibration	110
Corrections to the rigid rotator-harmonic oscillator model	113
Contributions to the thermodynamic properties arising from low lying electronic energy levels	118
Calculation of the thermodynamic properties of HCl from spectroscopic data	121
Thermodynamic properties of ethane	127

<b>5</b>	<b>Ideal relativistic classical and quantum gases</b> ( <i>P.T.Landsberg</i> )	132
<b>6</b>	<b>Non-electrolyte liquids and solutions</b> ( <i>A.J.B.Cruickshank</i> )	140
	Cell theories of the liquid state	142
	Equation of state treatment of liquids	154
	Binary solutions	168
<b>7</b>	<b>Phase stability, co-existence, and criticality</b> ( <i>A.J.B.Cruickshank</i> )	193
	Singular systems	193
	Binary systems	214
<b>8</b>	<b>Surfaces</b> ( <i>J.M.Haynes</i> )	230
	The Gibbs model of a surface	230
<b>9</b>	<b>The imperfect classical gas</b> ( <i>P.C.Hemmer</i> )	246
	The equation of state	246
	The virial expansion	254
	Pair distribution function. Virial theorem	261
<b>10</b>	<b>The imperfect quantum gas</b> ( <i>D.ter Haar</i> )	270
	The equation of state	270
	Second quantisation formalism	278
<b>11</b>	<b>Phase transitions</b> ( <i>D.ter Haar</i> )	282
	Einstein condensation of a perfect boson gas	282
	Vapour condensation	289
	Hard sphere gas	293
<b>12</b>	<b>Cooperative phenomena</b> ( <i>D.ter Haar</i> )	303
<b>13</b>	<b>Green function methods</b> ( <i>D.ter Haar</i> )	319
	Mathematical preliminaries	319
	General formalism	320
	The Kubo formula	323
	The Heisenberg ferromagnet	324
<b>14</b>	<b>The plasma</b> ( <i>D.ter Haar</i> )	333
<b>15</b>	<b>Negative temperatures and population inversion</b> ( <i>U.M.Titulaer</i> )	341
	Dynamic polarization	346
	A model of laser action	348
<b>16</b>	<b>Recombination rate theory in semiconductors</b> ( <i>J.S.Blakemore</i> )	350
<b>17</b>	<b>Transport in gases</b> ( <i>D.J.Griffiths</i> )	378
<b>18</b>	<b>Transport in metals</b> ( <i>J.M.Honig</i> )	401
<b>19</b>	<b>Transport in semiconductors</b> ( <i>J.M.Honig</i> )	432
<b>20</b>	<b>Fluctuations of energy and number of particles</b> ( <i>C.W.McCombie</i> )	448
<b>21</b>	<b>Fluctuations of general classical mechanical variables</b> ( <i>C.W.McCombie</i> )	457
<b>22</b>	<b>Fluctuations of thermodynamic variables: constant pressure systems, isolated systems</b> ( <i>C.W.McCombie</i> )	465

<b>23 Time dependence of fluctuations: correlation functions, power spectra, Wiener-Khintchine relations</b> ( <i>C.W.McCombie</i> )	472
<b>24 Nyquist's theorem and its generalisations</b> ( <i>C.W.McCombie</i> )	489
<b>25 Onsager relations</b> ( <i>C.W.McCombie</i> )	502
<b>26 Stochastic methods: master equation and Fokker-Planck equation</b> ( <i>J.Oppenheim, K.E.Shuler, G.H.Weiss</i> )	511
<b>27 Ergodic theory, <math>H</math>-theorems, recurrence problems</b> ( <i>D.ter Haar</i> )	531
<b>28 Variational principles and minimum entropy production</b> ( <i>S.Simons</i> )	549
Macroscopic principles	549
Electron flow problems	557
<b>Author index</b>	563
<b>Subject index</b>	565
