<b>Preface</b>	<b>xi</b>
<b>Chapter 1 Nonequilibrium thermodynamics</b>	<b>1</b>
1.1 Introductory remarks	1
1.2 Phenomenological relations	1
1.3 Thermodynamic power relations	4
1.4 Nonequilibrium thermodynamic variational principles	6
1.5 Equilibrium theory of fluctuations	13
<b>Chapter 2 Brownian motion theory</b>	<b>18</b>
2.1 Historical background	18
2.2 Einstein's fluctuation theory	19
2.3 Functional integration	24
2.4 Stochastic calculi	27
2.5 Generalized Einstein theory	34
<b>Chapter 3 Stochastic foundations of nonequilibrium thermodynamics</b>	<b>42</b>
3.1 Introductory remarks	42
3.2 Stochastic derivation of the reciprocal relations	43
3.3 The fluctuation-dissipation theorem	48
3.4 Stochastic stability criteria	50
3.4.1 Liapounov's stability theorem	50
3.4.2 Stochastic Liapounov functions	52
3.4.3 Fluctuation-dissipation theorem and stochastic asymptotic stability	56

<b>Chapter 4</b>	<b>Onsager–Machlup theory</b>	<b>62</b>
4.1	Introductory remarks	62
4.2	Onsager–Machlup formulation	63
4.3	Path integral formulation	67
4.4	Symmetry in past and future and rotational fluctuations	74
4.5	Beyond Gaussian fluctuations	75
<b>Chapter 5</b>	<b>The kinetic analog of Boltzmann’s principle</b>	<b>81</b>
5.1	Introductory remarks	81
5.2	Transformation of diffusion processes	82
5.3	Quasi-thermodynamic analysis of nonequilibrium statistical correlations	86
5.4	Statistical correlations and optimal stochastic control	94
5.5	Second-order stochastic processes	97
5.5.1	Preliminary considerations	97
5.5.2	Generalized kinetic analog of Boltzmann’s principle	99
5.5.3	Stochastic integrals induced by time-scale changes	104
5.5.4	Asymptotics: the limit of large resistance	107
5.5.5	Onsager–Machlup principle for Gaussian second-order processes	115
5.5.6	Asymptotics: the limit of small resistance	119
<b>Chapter 6</b>	<b>Stochastic H theorem</b>	<b>127</b>
6.1	Entropy and the second law	127
6.2	Multidimensional diffusion processes without microscopic reversibility	133
6.3	Asymptotics of quasi-thermodynamic potentials	138
6.4	Stochastic evolution criterion	142
6.5	The H-function and the second law	145
<b>Chapter 7</b>	<b>The thermodynamic limit</b>	<b>151</b>
7.1	Introductory remarks	151
7.2	Motivation and preliminary considerations	154
7.3	Asymptotic expression for the transition probability density	157
7.4	Variational formulation for paths of maximum likelihood	160
7.5	The minimum relative entropy principle and stochastic exit	165
7.6	Stability of fluctuating paths	169

<b>7.7</b>	<b>Multi-stationary state transitions</b>	<b>177</b>
7.7.1	Markov chains and graph theory	177
7.7.2	Markov chain formulation of Onsager–Machlup theory	179
7.7.3	Principle of minimal correlational entropy	181
7.7.4	The principle of minimum dissipation of energy	185
7.7.5	Symmetry in past and future and the principle of microscopic reversibility	186
7.7.6	Stochastic exit from domains containing multi-stationary states	190
