<i>Thermodynamic Foundations of Thermoelasticity</i>	
<i>by K. Wilmanski</i>	
Preface	1
1. The Notion of a Thermodynamic Process in Continua	3
2. Balance Laws	15
3. Thermoelastic Materials	41
4. Heat Conduction in Thermoelastic Materials	61
5. Waves in Thermoelastic Materials	73
References	89
Contents	93
 <i>Thermodynamics of Dissipative Materials</i>	
<i>by P. Perzyna</i>	
Preface	95
Contents	99
1. Global Formulation of Thermodynamics of Continua	101
2. General Material Structure	123
3. Internal State Variable Material Structure	145
4. Rate Type Material Structure	153
5. Isomorphic Material Structures (Isothermal Processes)	156
6. Thermo-Viscoplasticity for Finite Strains	160
7. Thermoplasticity for Finite Deformations	194
References	205
Figures	217
 <i>Variational Principles in Thermomechanics</i>	
<i>by G. Lebon</i>	
Introduction	221
I. Basic Concepts of the Calculus of Variation	224
II. Variational Principles in Classical Mechanics and in Elasticity	264
III. Variational Theory of Heat Conduction	330
IV. Coupled Thermoelasticity	366
General Appendix: Convergence and Error Estimates of the Variational and Galerkin	
Methods	397
Contents	412
