

CONTENTS

I. ELEMENTS OF CLASSICAL MECHANICS

1. Introductory Remarks	1
2. Lagrangian Formalism	2
3. Hamiltonian Formalism	9
4. Poisson Brackets and Canonical Transformations	19
5. Action Angle Variables and Hamilton-Jacobi Theory	28
6. Integral Invariants of Poincaré	34
References	44
List of Symbols	48

II. THE LIOUVILLE EQUATION AND DISTRIBUTION FUNCTIONS

1. The Concept of the Ensemble and the Liouville Equation	49
2. Solution of the Liouville Equation	57
3. The Prigogine Analysis of the Liouville Equation	62
4. The Third Interpretation of D : The N -Particle Distribution Function, f_N	81
5. The Dynamics of a System in Terms of f_N : Reduced Distributions. The BBKGY Equations	90
6. Conditional and s -tuple Distribution Functions	103
(a) <i>Conditional Probability</i>	103
(b) <i>Chapman-Kolmogorov Equation</i>	105
(c) <i>l-Tuple Distributions</i>	108
References	118
List of Symbols	121

III. FORMAL DEVELOPMENT OF KINETIC EQUATIONS AND THEIR RELATION TO FLUID DYNAMICS

1. The One-Particle Distribution Function and its Relation to Fluid Dynamics	123
2. The Bogoliubov Analysis of the BBKGY Equations	126
3. Cluster Expansions	142
4. Definition of a Kinetic Equation: Self-Consistent Solutions	155
5. Formal Expression for \mathcal{C}_2 in the Homogeneous Limit	160
6. The Radial Distribution Function and the Equation of State	164

References	174
List of Symbols	177

IV. DERIVATIONS AND PROPERTIES OF THE BOLTZMANN, KROOK-BHATNAGER-GROSS, FOKKER-PLANCK, AND RELATED EQUATIONS

1. Further Comments on Irreversibility	180
2. Collision Concepts	183
3. Boltzmann Equation	206
(a) <i>The Boltzmann Derivation</i>	206
(b) <i>Grad's Derivation</i>	218
(c) <i>Kirkwood's Derivation</i>	225
4. Properties of the Boltzmann Collision Operator	228
(a) <i>Summational Invariants</i>	228
(b) <i>The Conservation Equations</i>	231
(c) <i>Boltzmann's \mathcal{H}-Theorem</i>	238
(d) <i>The Maxwellian Distribution</i>	243
(e) <i>The Inhomogeneous Case Including an External Force</i>	246
5. The Krook-Bhatnager-Gross Equation	247
6. The Fokker-Planck Equation	252
(a) <i>Long-Range Collisions</i>	252
(b) <i>Derivation From the Boltzmann Equation</i>	255
(c) <i>Derivation From the Chapman-Kolmogorov Equation</i>	260
(d) <i>\mathcal{H}-Theorem</i>	267
(e) <i>Related Equations</i>	271
References	278
List of Symbols	281

V. SOLUTION AND FURTHER PROPERTIES OF THE BOLTZMAN EQUATION. THE APPROACH TO EQUILIBRIUM

1. The Chapman-Enskog Analysis of the Boltzmann Equation. Small Mean-Free-Path Approximation	286
(a) <i>Transport Coefficients</i>	286
(b) <i>Formal Expansion and Solution</i>	290
2. Properties of the Linear Boltzmann Collision Operator	306
(a) <i>Symmetry of the Kernel</i>	306
(b) <i>Positive Eigenvalues and Summational Invariant Eigenvectors</i>	308
(c) <i>Further Properties of \mathcal{L} and v_n</i>	311
3. The Moment Method	315
4. The Approach to Equilibrium	319
(a) <i>Further Comments on Irreversibility</i>	319

Contents	xi
(b) <i>The Equilibrium Distributions: Microstates and Macrostates: The A Priori Approach</i>	325
(c) <i>The Most Probable Macroscopic State</i>	335
(d) <i>Γ-Space Description for Imperfect Systems: Ensembles</i>	340
(e) <i>Fluctuations</i>	357
5. The A Posteriori Approach: Ergodic Hypothesis	361
6. Coarse Graining	367
References	371
List of Symbols	378
APPENDIX 1.	
Vector Calculus, Tensor Notation, and Some Useful Integrals	381
APPENDIX 2.	
Physical Constants	387
Useful Conversion Constants and Units	388
APPENDIX 3.	
The Founders of Dynamics and the Times They Lived In	389
INDEX	391
