

CONTENTS

C. Statistical Theories of Turbulence	3
C. C. Lin, Department of Mathematics, Massachusetts Institute of Technology, Cambridge, Massachusetts	
<i>Chapter 1. Basic Concepts</i>	
1. Introduction	3
2. The Mean Flow and the Reynolds Stresses	4
3. Frequency Distributions and Statistical Averages	5
4. Homogeneous Fields of Turbulence	7
5. Conventional Approach to the Statistical Theory of Turbulence	8
<i>Chapter 2. Mathematical Formulation of the Theory of Homogeneous Turbulence</i>	
6. Kinematics of Homogeneous Isotropic Turbulence. Correlation Theory	9
7. Dynamics of Isotropic Turbulence	15
8. The Spectral Theory of Isotropic Turbulence	17
9. Spectral Analysis in One Dimension	21
10. Spectral Analysis in Three Dimensions	23
11. General Theory of Homogeneous Anisotropic Turbulence	25
<i>Chapter 3. Physical Aspects of the Theory of Homogeneous Turbulence</i>	
12. Large Scale Structure of Turbulence	26
13. Small Scale Structure of Turbulence. Kolmogoroff's Theory	28
14. Considerations of Similarity	32
15. The Process of Decay	37
16. The Quasi-Gaussian Approximation	43
17. Hypotheses on Energy Transfer	45
<i>Chapter 4. Turbulent Diffusion and Transfer</i>	
18. Diffusion by Continuous Movements	47
19. Analysis Involving More Than One Particle	50
20. Temperature Fluctuations in Homogeneous Turbulence	51
21. Statistical Theory of Shear Flow	52
<i>Chapter 5. Other Aspects of the Problem of Turbulence</i>	
22. Turbulent Motion in a Compressible Fluid	54
23. Magneto-Hydrodynamic Turbulence	55
24. Some Aerodynamic Problems	56
25. Cited References	58
