	Preface	xvii
I	Fundamental Principles and Equations for a Closed System	1
	1. First Law	2
	1.1. <i>Enunciation of the First Law</i>	2
	1.2. <i>State Functions and Perfect Differentials</i>	2
	1.3. <i>Heat Capacities and Enthalpy</i>	4
	1.4. <i>Standard States</i>	6
	1.5. <i>Heats of Reactions</i>	8
	1.6. <i>Heats of Formation</i>	11
	2. Second Law	12
	2.1. <i>Enunciation of the Second Law</i>	12
	2.2. <i>Entropy as a Measure of Irreversibility and Degradation</i>	14
	2.3. <i>Criteria of Equilibrium</i>	14
	2.4. <i>Useful Relationships</i>	17
	2.5. <i>Perfect Gases</i>	17
	2.6. <i>Relation Between C_p and C_v</i>	20
	3. Third Law	21
	3.1. <i>Enunciation of the Third Law</i>	21
	3.2. <i>Experimental Verification</i>	22
	3.3. <i>Interpretation</i>	23
	3.4. <i>Consequences</i>	24
	3.5. <i>Estimates of Heat Capacities and Entropies</i>	25
	4. Application to the Stability of Phases for One-Component Systems	34
	4.1. <i>Gibbs Free Energy Function</i>	36
	4.2. <i>Clausius–Clapeyron Equation</i>	35
	4.3. <i>Triple Points</i>	39
	4.4. <i>Critical Points</i>	40
	5. Summary	43
	Problems	44
	References	47
	Selected Bibliography	47

II	Fundamental Principles and Equations for an Open System	49
	1. Introduction of the Chemical Potential	50
	2. Extensive Properties	51
	3. Partial Molar Properties	53
	3.1. <i>Definitions and Relationships</i>	53
	3.2. <i>Graphical Representation: The Method of Intercepts</i>	54
	3.3. <i>Constant Volume Conditions</i>	58
	3.4. <i>Independent Variables</i>	59
	4. Derivation of the Conditions for Equilibrium in a Heterogeneous System	61
	4.1. <i>Preliminary Example</i>	61
	4.2. <i>General Case</i>	62
	5. Application of the Conditions for Equilibrium in a Heterogeneous System	66
	5.1. <i>Example</i>	66
	5.2. <i>Common Tangent Construction</i>	67
	5.3. <i>Phase Rule</i>	68
	Problems	69
	References	70
	Selected Bibliography	70
III	Stability	71
	1. Stable and Unstable Equilibria	72
	2. General Discussion of Stability Conditions with Respect to Infinitesimal Fluctuations	73
	3. Stability Criteria for Infinitesimal Composition Fluctuations	74
	3.1. <i>First Method</i>	75
	3.2. <i>Second Method</i>	76
	4. Spinodal Line and Critical Point	80
	4.1. <i>Case of a Regular Solution</i>	82
	4.2. <i>General Case</i>	83
	5. Stability Function ψ	86
	6. Thermodynamic Calculations Associated with the Nucleation and Growth of Precipitates	89
	6.1. <i>Free Energy Changes</i>	89
	6.2. <i>Selection of the Displacement Variable</i>	92
	6.3. <i>Driving Forces</i>	93
	Problems	95
	References	96
IV	Chemical Potentials, Fugacities, and Activities	97
	1. Chemical Potential of a Single Component	98
	1.1. <i>Perfect Gas</i>	98
	1.2. <i>Real Gases; the Fugacity Function</i>	99
	1.3. <i>Solids and Liquids</i>	102

2. Mixture of Ideal Gases	103
2.1. Definition	103
2.2. Interpretation	104
2.3. Fugacities	104
3. Fugacities in a Mixture of Real Gases	106
3.1. Ideal Solution of Imperfect Gases	106
4. Solid and Liquid Solutions; the Activity Function	107
5. Partial Vapor Pressure of a Solute	109
6. Composition Dependence of the Activity Under Conditions of Constant Volume	110
Problems	111
References	112

V	Chemical Reactions	113
	1. Case of a Single Chemical Reaction	114
	1.1. General Treatment	114
	1.2. Example	117
	1.3. Effect of Temperature and Pressure	118
	2. Le Chatelier–Braun Principle	120
	3. Case of Simultaneous Reactions	122
	3.1. General Treatment	122
	3.2. Example: Composition of the Gas Phase of a Furnace	127
	3.3. Example: Decomposition of Silica	130
	4. Application to Oxygen and Sulfur Potential Diagrams	132
	5. Application to Some Important Metallurgical Equilibria	137
	5.1. Boudouard Reaction	137
	5.2. Dissociation of Carbon Dioxide	140
	5.3. Reduction of Iron Oxides	141
	6. Remarks on the Progress Variables	143
	6.1. Change of Basis	143
	6.2. Coupled Reactions	145
	Problems	147
	References	150
	Selected Bibliography	150

VI	Binary Solutions	151
	1. Thermodynamic Functions of Mixing	152
	2. Ideal Solution	154
	3. Excess Properties	155
	4. Raoult's and Henry's Laws	158
	4.1. Definitions	158
	4.2. Raoult's Law as a Consequence of Henry's Law	160
	4.3. Henry's Zeroth Order and First Order Laws	161
	5. Integration of the Gibbs–Duhem Equation	163
	Problems	166
	References	167

VII	Thermodynamic Formalisms Associated with Binary Metallic Solutions	169
	1. Dilute Solutions	170
	1.1. <i>Approximation of a Series by a Polynomial</i>	170
	1.2. <i>Application to $\ln \gamma_2$; Free Energy Interaction Coefficients</i>	172
	1.3. <i>Enthalpy and Entropy Interaction Coefficients</i>	174
	1.4. <i>Application of the Gibbs–Duhem Equation</i>	175
	2. Use of Polynomials Across the Composition Range	176
	3. Composition Coordinates and Standard States for the Measure of the Activity Function	179
	3.1. <i>Change of Reference State</i>	179
	3.2. <i>Composition Coordinates</i>	180
	3.3. <i>Raoultian Standard State and Mole Fraction Composition Coordinate</i>	181
	3.4. <i>Henrian Standard State and Mole Fraction Composition Coordinate</i>	181
	3.5. <i>Henrian Standard State and Weight Percent Composition Coordinate</i>	183
	4. Interaction Coefficients Based on a Weight Percent Composition Coordinate	184
	4.1. <i>Free Energy Interaction Coefficients</i>	184
	4.2. <i>Enthalpy and Entropy Interaction Coefficients</i>	185
	5. Application to Chemical Reactions	187
	5.1. <i>Notation</i>	187
	5.2. <i>Solubility of Gases</i>	187
	5.3. <i>Henrian Standard States and the Calculation of ΔG°</i>	188
	Problems	191
	References	194
VIII	Binary Phase Diagrams	195
	1. General Features	196
	2. Ideal and Nearly Ideal Systems	200
	3. Minima and Maxima	204
	4. Eutectic Points	207
	5. Peritectic Points	211
	6. Correspondences Between Various Types of Phase Diagrams	214
	7. Complex Phase Diagrams	215
	8. Calculation of Phase Diagrams	219
	8.1. <i>Numerical Techniques for the Calculation of Phase Boundaries</i>	219
	8.2. <i>Slopes and Curvatures of Phase Boundaries</i>	221
	8.3. <i>Calculation of the Boundaries in the Vicinity of Some Invariant Points</i>	223
	8.4. <i>Example of Application of the Numerical Techniques</i>	227
	8.5. <i>Calculation of the Thermodynamic Parameters of a Phase</i>	228
	Problems	229
	References	231
	Selected Bibliography	232

IX	Analytic Expressions for the Thermodynamic Functions of Dilute Multicomponent Metallic Solutions	235
	1. Raoult's and Henry's Laws for Multicomponent Solutions	236
	2. Dilute Ternary Solutions	237
	2.1. <i>Approximation of a Series by a Polynomial</i>	237
	2.2. <i>Application to $\ln \gamma_2$; Free Energy Interaction Coefficients</i>	238
	2.3. <i>Enthalpy and Entropy Interaction Coefficients</i>	240
	2.4. <i>Qualitative Atomistic Interpretation of the Interaction Coefficients</i>	241
	2.5. <i>Reciprocal Relations Between Interaction Coefficients</i>	243
	2.6. <i>Examples of Application</i>	247
	3. Dilute Multicomponent Solutions	252
	3.1. <i>Second Order Free Energy Interaction Coefficients</i>	252
	3.2. <i>Reciprocal Relationships</i>	253
	4. Interaction Coefficients on a Weight Percent Basis	255
	5. Application to Deoxidation Reactions	257
	Problems	259
	References	262
X	Multicomponent Solutions and Phase Diagrams	263
	1. General Features of Ternary Phase Diagrams	264
	1.1. <i>Graphical Representation</i>	264
	1.2. <i>Examples of Ternary Phase Diagrams</i>	267
	1.3. <i>Lever Rule</i>	271
	1.4. <i>Four-Phase Equilibria</i>	273
	2. Notes on the Graphical Representation of Multicomponent Phase Diagrams	274
	3. Representation and Calculation of Gibbs Free Energies	276
	3.1. <i>Analytic Representation of the Integral Gibbs Free Energy</i>	277
	3.2. <i>Analytic Representation of Activities</i>	282
	3.3. <i>Graphical Integration of the Gibbs–Duhem Equation</i>	283
	4. Calculation of Multicomponent Phase Diagrams	285
	4.1. <i>Formulation of the Conditions for Equilibrium Between Two Phases by Direct Minimization of the Gibbs Free Energy</i>	286
	4.2. <i>Stepwise Calculation of an Isothermal Section</i>	287
	4.3. <i>Slopes of the Phase Boundaries at Infinite Dilution of Component m</i>	289
	4.4. <i>Conclusions</i>	291
	Problems	293
	References	293
	Selected Bibliography	294
XI	Stability of Multicomponent Solutions and Effects of a Third Component on Some Invariant Points of Binary Systems	297
	1. Stability Conditions for a Multicomponent Solution	298
	1.1. <i>Derivation</i>	298
	1.2. <i>Existence of a Most Restrictive Condition</i>	301

2. Stability Function ψ	304
2.1. Definition	304
2.2. Applications	306
3. Critical Lines and Surfaces	309
3.1. Analytic Derivation	309
3.2. Effects on a Binary Critical Point of Small Additions of a Third Component	312
4. Effect of Small Additions of a Third Component on the Eutectic and Peritectic Temperatures of Binary Systems	315
4.1. Analytic Derivation	315
4.2. Alternative Forms and Consequences	317
4.3. Examples	320
4.4. Conclusions	324
Problems	325
References	326

XII

Thermodynamic Functions Associated with Compounds	329
1. Stoichiometric and Nonstoichiometric Compounds	330
2. Chemical Potential of a Compound	332
2.1. Binary Systems	332
2.2. Multicomponent Systems	336
3. Activity of a Compound	339
3.1. Reference States	339
3.2. Composition Dependence	340
4. Applications	342
5. Summary	343
Problems	344
References	344

XIII

Surfaces and Surface Tensions	345
1. Fundamental Equations	347
1.1. Temperature and Chemical Potentials at the Interface	347
1.2. Model System	349
1.3. Surface Tension	350
1.4. Equilibrium Conditions for the Pressures	352
2. Mechanical Equivalence of the Model System	353
2.1. General Procedure and Definition of the Surface Tension	353
2.2. Case of a Cylindrical Surface of Constant Curvature	354
3. Gibbs Adsorption Equation	359
4. Surface Tension and the Thermodynamic Potential Ω	360
4.1. Thermodynamic Equations	360
4.2. Surfaces of Solids	361

5. Variance of a Two-Phase System and Effects of the Interface's Curvature	362
5.1. <i>Variance of a Two-Phase System</i>	362
5.2. <i>Effect of Curvature on the Vapor Pressure of a Pure Species</i>	363
5.3. <i>Effect of Curvature on the Boiling Point of a Pure Species</i>	364
5.4. <i>Effect of Curvature on the Solubility of a Pure Species</i>	365
5.5. <i>Effect of Curvature on the Chemical Potential of a Solute</i>	365
5.6. <i>Remarks</i>	366
6. Equilibrium Shape of a Crystal	368
6.1. <i>Geometric Description of a Crystal</i>	368
6.2. <i>Wulff's Relationships</i>	369
6.3. <i>Wulff Plots</i>	370
7. The Equation of Laplace for a Crystal	372
8. Equilibrium at a Line of Contact of Three Phases	373
8.1. <i>Condition for Equilibrium</i>	373
8.2. <i>Contact Angle</i>	374
8.3. <i>Phase Distribution in a Polycrystalline Solid</i>	375
8.4. <i>Torque Component in Grain Boundaries</i>	375
9. Representative Values of Interfacial Tensions	380
10. Summary	383
Problems	384
References	385
Selected Bibliography	386

XIV

Adsorption	389
1. Surface Excess Quantities and the Position of the Dividing Surface	391
2. Relative Adsorptions	392
2.1. <i>Definition</i>	392
2.2. <i>Simplified Form</i>	393
3. Relative Functions and the Gibbs Adsorption Equation	395
4. Reduced Adsorptions	396
5. Alternative Thermodynamic Treatment of a Planar Interface	397
5.1. <i>Invariance with Respect to the Boundaries of the Surface Layer</i>	398
5.2. <i>Choice of the Two Dependent Variables X and Y</i>	399
6. Perfect Solution Model of an Interface	400
6.1. <i>Definition</i>	400
6.2. <i>Consequences</i>	401
7. Mixtures of Two Metals	403
8. Surface-Active Species	405
8.1. <i>Dilute Solutions</i>	405
8.2. <i>Saturation Stage</i>	406
8.3. <i>Models of Adsorption</i>	408
8.4. <i>Remarks</i>	413

9. Derivation of the Adsorption Functions from Surface Tension Data in Ternary Systems	414
9.1. <i>Direct Method</i>	415
9.2. <i>Method of Whalen, Kaufman, and Humenik</i>	418
9.3. <i>Graphic-Analytic Method</i>	419
9.4. <i>Analytic Method</i>	420
10. Adsorption in Multicomponent Solutions	422
10.1. <i>Adsorption Interaction Coefficient $\xi_i^{(j)}$</i>	423
10.2. <i>Examples</i>	424
11. Heats of Adsorption and Effect of the Temperature on the Surface Tension	425
11.1. <i>Standard State and Standard Heats of Adsorption</i>	425
11.2. <i>Isosteric Heat of Adsorption</i>	426
11.3. <i>Physical and Chemical Adsorptions</i>	429
11.4. <i>Effect of Temperature on the Surface Activity</i>	429
12. Summary	430
Problems	432
References	434
XV Statistical Models of Substitutional Metallic Solutions	437
1. Introduction	438
2. Ideal Solution	439
3. Regular Solution	441
4. Quasi-Chemical Approximation	446
4.1. <i>Assumptions of the Model</i>	446
4.2. <i>Derivation</i>	447
4.3. <i>Test of the Model and Discussion</i>	450
5. Central Atoms Model	452
5.1. <i>General Features of the Model</i>	452
5.2. <i>Possible Expressions for the Individual Partition Function q</i>	453
5.3. <i>Probabilities Associated with Different Configurations and Thermodynamic Functions</i>	455
5.4. <i>Quasi-Regular Solution</i>	458
5.5. <i>Correlation Between Excess Enthalpy and Entropy</i>	461
5.6. <i>Assumptions and Discussion</i>	463
6. Multicomponent Solutions	469
6.1. <i>Regular and Quasi-Regular Solutions</i>	469
6.2. <i>Quasi-Chemical Approximations</i>	472
7. Conclusions	473
Problems	474
References	474
XVI Statistical Models of Interstitial Metallic Solutions	477
1. Introduction	478
2. Ideal Interstitial Solution	478
3. Central Atoms Model of a Binary Interstitial Solution	482
3.1. <i>Derivation of the Model</i>	482
3.2. <i>Linear Variation of a Central Atom's Potential Energy</i>	485

3.3. <i>Application to the Iron–Carbon System</i>	486
3.4. <i>Comparison with Other Models</i>	488
4. Central Atoms Model of an Interstitial Solute in a Multicomponent System	491
4.1. <i>Preliminary Definitions and Parameters</i>	492
4.2. <i>Ternary Solution of Two Substitutional Components and One Interstitial Component</i>	493
4.3. <i>Ternary Solution of Two Interstitial Solutes</i>	495
4.4. <i>Quaternary Solution of Two Substitutional and Two Interstitial Components</i>	498
4.5. <i>Quaternary Solution of Three Substitutional Components and One Interstitial Component</i>	499
4.6. <i>Multicomponent Solutions</i>	501
5. Conclusions	502
Problems	504
References	504
Appendix 1. Units, Useful Constants, and Conversion Factors	507
Appendix 2. Atomic Weights and the Periodic Table	509
Appendix 3. Standard Enthalpies and Gibbs Free Energies of Formation at 298°K for Selected Compounds	511
Appendix 4. JANAF Tables for CO, CO₂, H₂, H₂O, N₂, and O₂	515
Appendix 5. Interaction Coefficients for Liquid Iron at 1600°C	523
Answers to Problems	535
