

## CONTENTS

Preface	7
<b>1 THE CONCEPT OF TEMPERATURE</b>	<b>9</b>
1.1 Fundamental Properties of Temperature	9
1.2 Numeration of Temperatures. Higher and Lower Temperature, Warmer and Colder State	13
1.3 Critique of the Mercury-Thermometer Scale and Similar Scales	18
1.4 On the Scale Sometimes Unsuitably Denoted as the Absolute Scale	19
1.5 Principle of the Method of Introducing Absolute Temperatures	21
1.6 It is Not True that Temperature is a Measure of the Intensity of Motion	26
1.7 Temperature is a Measure of Disorder per Unit Change of Energy	29
<b>2 NEGATIVE ABSOLUTE TEMPERATURES</b>	<b>36</b>
2.1 What is a Spin?	36
2.2 Temperature of a Spin System	37
2.3 Is it Possible to Assign a Temperature to a Spin System?	40
2.4 Can the Temperature of a Spin System be Measured?	42
2.5 Temperature and Occupation of Energy Levels	43
2.6 First Method of Obtaining Negative Absolute Temperatures	46
2.7 Quantum Amplifiers (Masers, Lasers)	47
<b>3 IN TEXTBOOKS IT IS SAID THAT ABSOLUTE TEMPERATURES CANNOT BE NEGATIVE</b>	<b>51</b>
3.1 Principle of Proof	51
3.2 Second Law of Thermodynamics and Consequences Following From It	54
<b>4 NEW FUNDAMENTALS OF THERMODYNAMICS</b>	<b>59</b>
4.1 Who is Right?	59
4.2 Further Surprise	61
4.3 Perpetual Motion of the Second Kind	63
4.4 New Formulation of Second Law of Thermodynamics	64
Conclusion	67
Index	69
