

CONTENTS

INTRODUCTION	v
1. PRELIMINARY ANALYSIS	1
1.1. Sublinear functions and the Hahn-Banach theorem	1
1.2. Compact convex sets	4
1.3. Radon measures	6
1.4. Extremal points in compact convex sets	10
1.5. References	14
2. DYNAMICAL SYSTEMS AND AMENABLE GROUPS	15
2.1. Dynamical systems	15
2.2. The fixed point property and the ameaning filter	19
2.3. Amenability and algebraic constructions	30
2.4. References	33
3. ERGODIC THEOREMS	35
3.1. Invariant linear functionals	35
3.2. Invariant vectors and mean ergodic theorems	41
3.3. Individual ergodic theorems	47
3.4. The saddle ergodic theorem	50
3.5. References	52
4. ENTROPY OF ABSTRACT DYNAMICAL SYSTEMS	53
4.1. Equivalence of abstract dynamical systems	53
4.2. Entropy of partitions	54
4.3. Entropy of dynamical systems	59
4.4. The almost subadditive ergodic theorem and the Shannon-McMillan theorem	64
4.5. References	70

5. ENTROPY AS A FUNCTION AND THE VARIATIONAL PRINCIPLE	71
5.1. Topological entropy	71
5.2. Pressure of a continuous function and the variational principle	72
5.3. Entropy as a function of the measure	82
5.4. References	85
6. STATISTICAL MECHANICS ON A LATTICE	86
6.1. Local specifications and Gibbs measures	86
6.2. Cocycles and quasi-invariant measures	91
6.3. Phase transitions	96
6.4. Supermodular interactions	98
6.5. References	104
7. DYNAMICAL SYSTEMS IN STATISTICAL MECHANICS	105
7.1. Invariant local specifications	105
7.2. Invariant Gibbs measures and equilibrium measures	106
7.3. Mixing properties	108
7.4. Example: a theorem of Ruelle's	112
7.5. References	115
8. EQUIVALENCE OF COUNTABLE AMENABLE GROUPS	117
8.1. Tiling amenable groups	117
8.2. Equivalence of countable groups	124
8.3. Rokhlin's lemma and hyperfiniteness of countable amenable groups	130
8.4. References	138
