HISTORICAL INTRODUCTION 1

Chapter 1. *The Statistical Basis of Thermodynamics* 9

1.1 The macroscopic and the microscopic states 10
1.2 Contact between statistics and thermodynamics: physical significance of $\Omega(N, V, E)$ 11
1.3 Further contact between statistics and thermodynamics 14
1.4 The classical ideal gas 17
1.5 The entropy of mixing and the Gibbs paradox 24
1.6 The "correct" enumeration of the microstates 27
Problems 29

Chapter 2. *Elements of Ensemble Theory* 32

2.1 Phase space of a classical system 32
2.2 Liouville's theorem and its consequences 34
2.3 The microcanonical ensemble 37
2.4 Examples 39
2.5 Quantum states and the phase space 42
2.6 Two important theorems—the "equipartition" and the "virial" 43
Problems 48

Chapter 3. *The Canonical Ensemble* 51

3.1 Equilibrium between a system and a heat reservoir 52
3.2 A system in the canonical ensemble 53
3.3 Physical significance of the various statistical quantities 61
3.4 Alternative expressions for the partition function 65
3.5 The classical systems 66
3.6 Energy fluctuations in the canonical ensemble: correspondence with the microcanonical ensemble 69
3.7 A system of harmonic oscillators 74
3.8 The statistics of paramagnetism 79
3.9 Thermodynamics of magnetic systems: negative temperatures 85
Problems 92

Chapter 4. The Grand Canonical Ensemble 98

4.1 Equilibrium between a system and a particle-energy reservoir 99
4.2 A system in the grand canonical ensemble 100
4.3 Physical significance of the statistical quantities 101
4.4 Examples 104
4.5 Density and energy fluctuations in the grand canonical ensemble: correspondence with other ensembles 108
Problems 111

Chapter 5. Formulation of Quantum Statistics 113

5.1 Quantum-mechanical ensemble theory: the density matrix 113
5.2 Statistics of the various ensembles 116
5.3 Examples 119
5.4 Systems composed of indistinguishable particles 125
5.5 The density matrix and the partition function of a system of free particles 129
Problems 134

Chapter 6. The Theory of Simple Gases 136

6.1 An ideal gas in a quantum-mechanical microcanonical ensemble 136
6.2 An ideal gas in other quantum-mechanical ensembles 140
6.3 Statistics of the occupation numbers 143
6.4 Kinetic considerations 147
6.5 A gaseous system in mass motion 152
6.6 Gaseous systems composed of molecules with internal motion 157
A. Monatomic molecules 158
B. Diatomic molecules 159
C. Polyatomic molecules 168
Problems 170

Chapter 7. Ideal Bose Systems 175

7.1 Thermodynamic behavior of an ideal Bose gas 176
7.2 Thermodynamics of the black-body radiation 187
7.3 The field of sound waves 192
7.4 Inertial density of the sound field 199
7.5 Elementary excitations in liquid helium II 204
Problems 210

Chapter 8. Ideal Fermi Systems 215

8.1 Thermodynamic behavior of an ideal Fermi gas 215
8.2 Magnetic behavior of an ideal Fermi gas 222
A. Pauli paramagnetism 223
B. Landau diamagnetism and de Haas–van Alphen effect 227
8.3 The electron gas in metals 232
A. Thermionic emission 236
B. Photoelectric emission 240
8.4 Statistical equilibrium of white dwarf stars 243
8.5 Statistical model of the atom 248
Problems 252

Chapter 9. Statistical Mechanics of Interacting Systems: The Method of Cluster Expansions 255

9.1 Cluster expansion for a classical gas 255
9.2 Virial expansion of the equation of state 262
9.3 Evaluation of the virial coefficients 264
9.4 General remarks on cluster expansions 269
9.5 Exact treatment of the second virial coefficient 273
9.6 Cluster expansion for a quantum-mechanical system 278
9.7 The binary collision method of Lee and Yang 282
9.8 Applications of the binary collision method 290
A. A gas of noninteracting particles 290
B. A gas of hard spheres 292
Problems 297

Chapter 10. Statistical Mechanics of Interacting Systems: The Method of Pseudopotentials 300

10.1 The two-body pseudopotential 301
10.2 The N-body pseudopotential and its eigenvalues 305
10.3 Low-temperature behavior of an imperfect Fermi gas 309
10.4 Low-temperature behavior of an imperfect Bose gas 315
10.5 The ground state wave function of a Bose fluid 322
10.6 States with quantized circulation 328
10.7 "Rotation" of the superfluid 333
10.8 Quantized vortex rings and the breakdown of superfluidity 337
Problems 340

Chapter 11. Statistical Mechanics of Interacting Systems: The Method of Quantized Fields 342

11.1 The formalism of second quantization 342
11.2 Low-lying states of an imperfect Bose gas 350
11.3 Energy spectrum of a Bose liquid 355
11.4 Low-lying states of an imperfect Fermi gas 360
11.5 Energy spectrum of a Fermi liquid: Landau's phenomenological theory 365
Problems 371

Chapter 12. Theory of Phase Transitions 374

12.1 General remarks on the problem of condensation 375
12.2 Mayer's theory of condensation 379
12.3 The theory of Yang and Lee 383
12.4 Further comments on the theory of Yang and Lee 389
A. The gaseous phase and the cluster integrals 389
B. An electrostatic analogue 390
12.5 A dynamical model for phase transitions 392
12.6 The lattice gas and the binary alloy 397
12.7 Ising model in the zeroth approximation 400
12.8 Ising model in the first approximation 408
12.9 Exact treatments of the one-dimensional lattice 414
A. The combinatorial method 414
B. The matrix method 419
C. The zeros of the grand partition function 420

12.10 Study of the two- and three-dimensional lattices 424
12.11 The critical indices 431
12.12 The law of corresponding states 434
Problems 439

Chapter 13. Fluctuations 443

13.1 Thermodynamic fluctuations 444
13.2 Spatial correlations in a fluid 447
13.3 Einstein–Smoluchowski theory of the Brownian motion 451
13.4 Langevin theory of the Brownian motion 456
13.5 Approach to equilibrium: the Fokker–Planck equation 462
13.6 Spectral analysis of fluctuations: the Wiener–Khintchine theorem 467
13.7 The fluctuation–dissipation theorem 474
13.8 The Onsager relations 478
Problems 482

APPENDIXES 487

A. Influence of boundary conditions on the distribution of quantum states 487
B. Certain mathematical functions 490
C. "Volume" and "surface area" of an n-dimensional sphere of radius R 501
D. On the Bose–Einstein integrals 502
E. On the Fermi–Dirac integrals 505
F. General physical constants 508
G. Defined values and equivalents 509
H. General mathematical constants 510
