[for the meaning of square brackets, see p. xi]

<i>Preface</i>	vii
<i>Introductory remarks, which are rather important</i>	ix
<b>1 The harmonic oscillator</b>	1
Determining the vibration frequency	3
Lossy vibrators	5
Driven harmonic oscillator	8
<b>2 Generalized linear systems and stability criteria</b>	11
Negative dissipation	11
Saddle-point instability	14
The phase plane; stability criteria	18
Linear systems of higher order; Routh–Hurwitz and Nyquist	25
A model of delayed feedback	30
Further comments on delayed feedback	34
[Political implications]	36
<b>3 Response of linear systems</b>	39
Impulse response function	41
Examples of impulse response	42
Applications of the impulse response function	44
Compliance, susceptibility, etc.	48
The step-function response	50
Relaxation processes	52
Comparison with experimental results for typical relaxation processes	57
The approach to equilibrium	64
Extended systems	67
<b>4 Periodically driven non-linear systems</b>	72
Limit cycles, metastability and hysteresis	72
Mode jumping	77
Highly non-linear systems; introduction to the Poincaré map	86
Stability rules for discrete sampling	89
Application of stability test to the impact oscillator	94
Behaviour outside the range of stability; subharmonics	98
Bifurcation and chaos in one variable	100
Further properties of the one-variable map	108

Successive approximation to the solution of equations	113
Two-variable mapping and bifurcations	114
Examples of bifurcation and chaos	119
[The prevalence of chaos]	127
<b>5 Elementary types of catastrophe</b>	129
Classification	132
Limit point instabilities	134
Stable symmetric transitions	141
Rayleigh's principle	148
Unstable symmetric transitions	149
Influence of imperfections on critical behaviour; the cusp catastrophe	155
Bistable systems	158
The cusp catastrophe (continued)	161
van der Waals' equation	162
The cusp catastrophe (for the last time)	166
[Other types of catastrophe]	169
<b>6 Phase transitions</b>	171
The liquid-vapour critical point	171
Lambda-point anomalies in the thermal capacity	177
Second-order transitions	182
Landau theory	186
Weiss theory of ferromagnetism	188
Ginsbury-Landau theory of fluctuations	190
Domains	195
Critical slowing-down	198
<b>7 Broken symmetry</b>	203
Symmetry changes at a critical point	203
Intrinsic broken symmetry	205
Broken symmetry in quantum mechanics	209
Reconciliation of quantum and classical physics	213
[Limitations of science]	216
<i>References</i>	220
<i>Index</i>	226
