LECTURES	
LECTURES ON THE STATISTICAL THERMODYNAMICS OF NONEQUILIBRIUM STEADY STATES	
J. Keizer	3
Introduction Thermodynamics at equilibrium Fluctuation theory Thermodynamics at steady state Dissipation and reversible processes at steady state The electromotive force at steady state	
NONEQUILIBRIUM FLUCTUATIONS: NOISE AND CORRELATION FUNCTIONS IN SOME SYSTEMS	
J.M. Rubí	23
Introduction Introduction continued: fluctuations about nonequilibrium steady states Correlation functions The effect of fluctuating sources	
NONLINEAR TRANSPORT AND MODE COUPLING IN FLUIDS UNDER SHEAR	
J.W. Dufty and J. Lutsko	47
Introduction Uniform shear flow Langevin model Correlation functions Linear hydrodynamic modes Nonlinear nonequilibrium mode coupling Conclusions Appendix A - Linear Langevin model Appendix B - Lowest Order nonlinear mode coupling	
NONEQUILIBRIUM THERMODYNAMICS AND STATISTICAL PHYSICS OF THE LIQUID-VAPOUR INTERFACE	
D. Bedeaux	85
Introduction On the mathematical description of interfaces Conservation laws Entropy balance The phenomenological equations Equilibrium fluctuations, general theory Equilibrium fluctuations of the height The average density profile The density-density correlation function The direct correlation function in the capillary wave model Time denondont fluctuations of the interface	

HYDRODYNAMIC INTERACTIONS AND TRANSPORT PROPERTIES OF SUSPENSIONS 119 P. Mazur Introduction Hydrodynamic interactions Equations of motion; formal solution Irreducible tensors; induced force multipoles and velocity surface moments Determination of induced forces; properties of connectors Mobility tensors Wall effects; the spherical container The fluid velocity field On transport properties in suspensions Diffusion Diffusion and long-range hydrodynamic interactions Virial expansion of the selfdiffusion coefficient; non additivity of hydrodynamic interactions Selfdiffusion in a concentrated suspension Sedimentation FUNCTIONAL POISSON BRACKETS FOR NONLINEAR FLUID MECHANICS EQUATIONS T.F. Nonnenmacher 149 Introduction Basic concept for Lagrange and Hamilton formalism The Madelung and Euler fluid equations The system of Maxwell-Schrödinger equations and its fluid mechanics analogon Ginzburg-Landau and dynamical London equations Bracket formulation for dissipative dynamical systems LORENTZ MODELS REVISITED OR WHAT ONE CAN LEAR FROM ANTS IN A LABYRINTH Introduction Microscopic theory Bond percolation problem More random lattices Conclusions and outlook NOISE INDUCED TRANSITION Modellisation and external noise Influence of external noise on bifurcations Shift of a Hopf bifurcation by external noise AN INTRODUCTION TO NONEQUILIBRIUM PROBLEMS INVOLVING ELECTROMAGNETIC RADIATION 224 P.T. Landsberg Introduction The nonequilibrium statistical entropy General properties of electron transition rates Discrete states: electrons coupled to photons in two-level systems Continuous photon spectrum and fluxes Diluted black-body radiation

Efficiencies

Problems and solutions

SEMINARS

R.E. Nettleton	71
EXTENDED THERMODYNAMICS AND DIFFUSION IN BINARY MIXTURES G. Lebon and M.S. Boukary 2	
G. Lebon and M.S. Boukary 2	
	79
NONEQUILIBRIUM PLASMA IN HIGHLY PHOTOEXCITED SEMICONDUCTORS	
<i>R. Luzzi</i>	89
RELAXATION TIMES IN A BISTABLE SYSTEM: THEORY AND EXPERIMENT	
F. Moss, J.M. Sancho, P.V.E. McClintock and R. Mannella 2	99
SOME DYNAMICAL ASPECTS OF THE FREEDERICKSZ TRANSITION	
M. San Miguel and F. Sagués 3	05
LOCAL EQUILIBRIUM APPROXIMATION IN FOKKER-PLANCK MODELS	
J.J. Brey and J.M. Casado 3	18
BROWNIAN MOTION IN CONCENTRATED SUSPENSIONS	
C. Van den Broeck 3	28

SHORT COMMUNICATIONS

MUTUAL DIFFUSION IN A BINARY MIXTURE	
R.F. Rodríguez, M. López de Haro and L.S. García-Colín	343
COMMENTS ON SHOCK WAVE STRUCTURE	
J.I. Jiménez Aquino and R.M. Velasco	349
GENERALIZED EXTENDED NONEQUILIBRIUM THERMODYNAMICS OF DIFFUSION IN PARAMAGNETICS	
B. Maruszewski	353
CAUSALITY PROBLEM IN THE RELATIVISTIC KINETIC THEORY	
M. Dudyński and M.L. Ekiel-Jeźewska	357
SOLUTION OF THE MODEL BOLTZMANN-LORENTZ EQUATIONS FOR PARTICLES WITH SPIN	
M. Dudyński	361
A MICROSCOPIC DERIVATION OF THE GENERALIZED ONSAGER'S THEORY	
J.L. del Río and A. Hernández-Machado	365
CORRELATIONS IN A LASER WITH FLUCTUATING PUMP PARAMETER	
A. Hernández-Machado, M. San Miguel and S. Katz	368
INTEGRO-DIFFERENTIAL EQUATION FOR THE JOINT PROBABILITY DENSITY OF NON-MARKOVIAN PROCESS. PROPERTIES OF THE CORRELATION FOR SHORT TIMES	
L. Pesquera and M.A. Rodriguez	372

EXACT SOLUTIONS FOR THE STOCHASTIC MALTHUS-VERHULST MODEL	
C. Aizpuru, M. Morillo and J.J. Brey	375
DENSITY, ELECTRIC FIELD AND VOLTAGE FLUCTUATIONS AROUND NONEQUILIBRIUM STEADY STATES NEAR THE GUNN INSTABILITY	
A. Diaz-Guilera and J.M. Rubi	379
ON ENERGY EXCHANGE BETWEEN MULTIDIMENSIONAL FLUCTUATING SYSTEMS IN EQUILIBRIUM	
G. Brunk	383
SOME RECENT ADVANCES IN BLACK HOLE THERMODYNAMICS	
D. Pavón and J.M. Rubi	387
