

CONTENTS

R. AZENCOTT, H. DOSS	- L'equation de Schrödinger $\hbar$ tend vers zero; une approche probabiliste	1
A. BADRIKIAN	- Rearrangement Gaussien de fonctions	19
F. BENTOSELA	- Electrons of a solid in an external electric field..	32
J. BERTRAND, G. RIDEAU-	An intrinsic approach to the evolution of quantum observables in terms of stochastic processes on phase space	39
D. DÜRR	- Diffusions and central limit theorems	55
W. KIRSCH	- Random Schrödinger operators and the density of states	68
Y. LEVY	- Ergodic properties of the Lozi map	103
R. LIMA	- Proprietes spectrales pour des Hamiltonians presque-periodiques	117
P. MOUSSA, D. BESSIS	- A solvable almost periodic Schrödinger operator ...	136
P. PICCO	- On the absence of breakdown of symmetry for the plane rotator model with long range unbounded random interaction	148
W. von WALDENFELS	- Stratonovich solution of a quantum stochastic differential equation describing light emission and absorption	155
V. WIHSTUTZ	- Analytic expansion of Lyapunov exponents associated to the Schrödinger operator	177
S. ALBEVERIO, Ph. BLANCHARD, R. HØEGH-KROHN	- Reduction of non linear problems to Schrödinger or heat equations: Formation of Kepler orbits, singular solutions for hydrodynamical equations	189
S. ALBEVERIO, Ph. BLANCHARD, F. GESZTESY, L. STREIT	- Quantum mechanical low energy scattering in terms of diffusion processes	207

The following lectures given at the Meeting will appear elsewhere:

S. ALBEVERIO, Remarks on Dirichlet quantum mechanics and polymers

Y. CHOQUET-BRUHAT, Supergravité

H.H. FLICHE, J.M. SOURIAU, R. TRIAY, Parallélisme des halos de galaxies et des nébulosités associées aux O.S.O.

H. HAKEN, The stochastic slaving principle with applications to stochastic processes in quantum physics and classical dissipative systems

H. ROST, Fluctuations of stochastic systems in equilibrium: the role of conserved quantities

E. SEILER, Phase structure of finite temperature (lattice) gauge theories

B. SOUILLARD, Random and almost-periodic Schrödinger operators

N. WIELENS, Uniqueness of Hamiltonians and processes
