

CONTENTS

(I) = Invited paper

Proceedings of the International Conference on Thermodynamics; Cardiff (UK); 1-4 April 1970

Preface—Chairman, Organizing Committee (Prof. P. T. Landsberg) v

A. Foundations

- Main ideas in the axiomatics of thermodynamics—P. T. LANDSBERG (I) 215
- On subadditivity and convexity properties of thermodynamic functions
—L. GALGANI and A. SCOTTI 229
- The extension of classical phenomenological thermodynamics to open systems (the chemical potential)—W. J. HORNIX 237
- General definition of the perfect gas concept—G. SÜSSMANN and E. HILF 243
- Resolution of the hierarchy of many-body distribution functions—S. FUJITA 249

B. Phases, Surfaces and Thermodynamic Limit

- The thermodynamics of phase equilibrium: from the phase rule to the scaling laws—L. TISZA (I) 261
- Thermodynamics of surface phenomena—J. C. MELROSE (I) 273
- Non-hydrostatic thermodynamics of chemical and phase changes—A. G. MCLELLAN 287
- Some aspects of the thermodynamic limit—A. MÜNSTER 293
- Determination of the free volume and the entropy by a Monte Carlo method—EVELINE M. GOSLING and K. SINGER 303
- The thermodynamic description of phase transitions—M. H. COOPERSMITH 311

C. Thermo-mechanics

- Some recent results in the theory of fading memory—B. D. COLEMAN (I) 321
- A new systematic approach to non-equilibrium thermodynamics—I. MÜLLER 335
- On the validity of the Clausius–Duhem inequality—J. U. KELLER 343

On the rational foundations of the non-equilibrium thermodynamics of ordinary fluid mixtures—J. L. BARTELT and F. H. HORNE	349
Thermodynamic restrictions in non-linear rate type materials—J. E. FITZGERALD	357

D. Irreversibility and Quantum Mechanics

The concept of irreversibility in statistical mechanics—R. ZWANZIG (I)	371
Thermodynamic theory of stability, structure and fluctuations—G. NICOLIS (I)	379
Stochastic processes and the quantum evolution of states—R. E. COLLINS and F. G. HALL	393
Irreversibility in non-linear oscillator systems—J. FORD	401
Entropy oscillation and the H theorem for finite segments of infinite, coupled-harmonic-oscillator chains—H. S. ROBERTSON and M. A. HUERTA	409
Secondary effects in irreversible thermodynamics—J. HARRIS	419

E. Statistical Thermodynamics in Astrophysics and Relativity

Extreme régimes of temperature and pressure in astrophysics—M. A. RUDERMAN (I)	429
Time asymmetry in electrodynamics and cosmology—J. V. NARLIKAR (I)	449
Cosmic evolution and thermodynamic irreversibility—D. LAYZER	457
Thermodynamics of hyperon stars—K. KOEBKE and E. HILF	469
Carnot cycles for general relativistic systems—R. EBERT	481
Ensemble versus time average probabilities in relativistic statistical mechanisms—P. T. LANDSBERG and K. A. JOHNS	487
Variational formulation of relativistic fluid thermodynamics—L. A. SCHMID	493

F. Pedagogical Papers

An elementary introduction to entropy via irreversibility—R. GILES	503
A simple, unified approach to the first and second laws of thermodynamics—J. KESTIN	511
Principles of classical thermodynamics—C. GURNEY	519
Thermodynamics of solids under stress—T. H. K. BARRON and R. W. MUNN	527

G. Discussion Reports

The laws of thermodynamics—J. S. ROWLINSON, F.R.S.	535
Temporal asymmetry in thermodynamics and cosmology—O. COSTA DE BEAUREGARD	539
Discussion on the teaching of thermodynamics—M. W. ZEMANSKY	549
Author index	554
