

# CONTENTS

<i>Preface</i>	v
----------------	---

## **Chapter One**

<b>SOME INTRODUCTORY CONSIDERATIONS</b>	<b>1</b>
1·1 The nature of thermodynamics	1
1·2 Concepts, models, and laws	3
1·3 A fresh look at some familiar concepts	4
1·4 Mechanical concepts of energy	12
1·5 Continuum concepts	13
1·6 The conceptual basis of dimensional systems	15

## **Chapter Two**

<b>ENERGY AND THE FIRST LAW</b>	<b>22</b>
2·1 Introduction	22
2·2 Systems	23
2·3 Energy	24
2·4 Conservation of energy	27
2·5 Energy transfer as work	30
2·6 Evaluation of energy transfer as work	31
2·7 Some particular work modes	36
2·8 Work for particular processes	40
2·9 Energy transfer as heat	42
2·10 The first law for a control mass	44
2·11 Examples of control-mass energy balances	45
2·12 Energy equivalents	51
2·13 Summary of some important terms	51

**Chapter Three**

<b>PROPERTIES AND STATE</b>	<b>57</b>
3·1 Concepts of property and state	57
3·2 Equilibrium and the thermodynamic state	59
3·3 Temperature	61
3·4 Intensive and extensive state	65
3·5 Independent variations of the thermodynamic state	66
3·6 The state postulate	67

**Chapter Four**

<b>STATES OF SIMPLE SUBSTANCES</b>	<b>72</b>
4·1 The simple substance	72
4·2 Equations of state	73
4·3 The general nature of a simple compressible substance	75
4·4 Using the tabular and graphical equations of state	78
4·5 Metastable states in phase transitions	80
4·6 An engineering example	80
4·7 Some other thermodynamic properties	82
4·8 The perfect gas	86
4·9 The simple magnetic substance	90

**Chapter Five**

<b>ENERGY ANALYSIS OF THERMODYNAMIC SYSTEMS</b>	<b>94</b>
5·1 General methodology	94
5·2 Examples of control-mass energy analysis	96
5·3 The control-volume transformation	108
5·4 Examples of control-volume energy analysis	112

**Chapter Six**

<b>ENTROPY AND THE SECOND LAW</b>	<b>137</b>
6·1 The essence of the second law	137
6·2 Allowed quantum states	139
6·3 Quantum-state probabilities	141
6·4 Entropy	144
6·5 Approach to equilibrium	149
6·6 Summary	156

**Chapter Seven**

<b>SOME CONSEQUENCES OF THE SECOND LAW</b>	<b>162</b>
7·1 Introduction	162
7·2 Entropy as a function of state	163
7·3 The thermodynamic definition of temperature	164
7·4 The thermodynamic definition of pressure	168
7·5 Intensive representations and some extensions	171
7·6 Macroscopic evaluation of entropy	173
7·7 Reversible and irreversible processes	175
7·8 An example of a second-law analysis	178
7·9 Two idealized systems	180
7·10 Entropy change and production for a control mass	184
7·11 Examples of control-mass second-law analysis	187
7·12 Equivalence of the mechanical and thermodynamic pressures	188
7·13 Equivalence of the thermodynamic and empirical temperatures	190
7·14 Applications of the second law to energy-conversion systems	191
7·15 A remark on the thermodynamic temperature	197
7·16 The second law for a control volume	197
7·17 Examples of second-law analysis	199
7·18 A summary of the first and second laws	204

**Chapter Eight**

<b>THE THERMODYNAMICS OF STATE</b>	<b>210</b>
8·1 Introduction	210
8·2 The Gibbs equation	210
8·3 Equation of state for the perfect gas	212
8·4 Other $P$ - $v$ - $T$ equations for gases	220
8·5 Algebraic equation of state for an incompressible liquid	224
8·6 Differential equations of state	228
8·7 Some important property relations	231
8·8 Thermodynamics of the simple magnetic substance	239
8·9 Algebraic equation of state for the Curie substance	241

**Chapter Nine**

<b>CHARACTERISTICS OF SOME THERMODYNAMIC SYSTEMS</b>	<b>247</b>
9·1 Analysis of thermodynamic systems	247
9·2 The Carnot cycle	249
9·3 Pattern processes	251

9·4	A particular vapor power system	255
9·5	Modern utilization of the Rankine cycle	260
9·6	Other Rankine cycle modifications	266
9·7	Some thoughts on the working fluid	271
9·8	Other vapor power cycles	272
9·9	Vapor refrigeration systems	273
9·10	Some problems and advantages of all-gas cycles	279
9·11	A particular gas-turbine power system	280
9·12	Some remarks on the steady-flow compression process	283
9·13	The Brayton cycle and its modifications	285
9·14	Other gas power cycles	291
9·15	Air-cycle refrigerator	297
9·16	A simple thrusting system	299
9·17	Other thrusting systems	303
9·18	Direct energy-conversion systems	307
9·19	Concluding remarks	314

## Chapter Ten

<b>THERMODYNAMICS OF NONREACTING MIXTURES</b>		<b>328</b>
10·1	Descriptions of mixtures	328
10·2	Mixtures of independent substances	330
10·3	Mixtures of perfect gases	333
10·4	Application to air–water–vapor mixtures	337
10·5	Air conditioning	345

## Chapter Eleven

<b>THERMODYNAMICS OF REACTING MIXTURES</b>		<b>355</b>
11·1	Some chemical concepts and terms	355
11·2	Fuel analysis and product composition	357
11·3	Standardized energy and enthalpy	359
11·4	Heats of reaction, heating values	361
11·5	Some illustrative calculations	363
11·6	Absolute entropy and the third law of thermodynamics	369
11·7	A second-law application	371

## Chapter Twelve

<b>EQUILIBRIUM</b>		<b>377</b>
12·1	The general approach	377
12·2	Equilibrium	378

12·3	Evaluation of the electrochemical potential	380
12·4	Electrochemical potentials in a mixture of perfect gases	383
12·5	The Gibbs phase rule	385
12·6	Alteration of the saturated-vapor pressure by an inert gas	388
12·7	General conditions for chemical equilibrium of a mixture	390
12·8	Degrees of reaction freedom: The simple reactive mixture	393
12·9	Equations of reaction equilibrium	394
12·10	Reactions in perfect-gas mixtures	395
12·11	Calculation examples	397
12·12	Van't Hoff equation	400
12·13	Application to the fuel cell	401
12·14	Current methods and applications of the thermodynamic theory of combustion	403

### Chapter Thirteen

<b>AN INTRODUCTION TO COMPRESSIBLE FLOW</b>		<b>407</b>
13·1	The momentum principle	<b>407</b>
13·2	Some momentum-principle applications	<b>412</b>
13·3	Stagnation properties in compressible flow	<b>413</b>
13·4	Mach number, speed of sound, regimes in compressible flow	<b>414</b>
13·5	A nozzle design problem	<b>418</b>
13·6	One-dimensional steady isentropic flow	<b>420</b>
13·7	Choking in isentropic flow	<b>425</b>
13·8	Isentropic flow in convergent-divergent passages	<b>426</b>
13·9	Shock waves	<b>428</b>
13·10	Compressibility effects in flows with friction and heat transfer	<b>434</b>
13·11	Examples of compressible flow calculations	<b>435</b>

### Chapter Fourteen

<b>AN INTRODUCTION TO HEAT TRANSFER</b>		<b>449</b>
14·1	Some basic concepts	<b>449</b>
14·2	The conduction rate equation	<b>451</b>
14·3	Some simple conduction problems	<b>453</b>
14·4	Convection	<b>465</b>
14·5	Convection calculation examples	<b>468</b>

14·6	Fins	474
14·7	Heat exchangers	478
14·8	Radiation	483
14·9	Summary	486
 <b>Appendix A</b>		
<b>UNIT SYSTEMS AND DIMENSIONAL EQUIVALENTS</b>		<b>495</b>
 <b>Appendix B</b>		
<b>THERMODYNAMIC PROPERTIES OF SUBSTANCES</b>		<b>505</b>
 <b>Appendix C</b>		
<b>INFORMATION FOR HEAT TRANSFER ANALYSIS</b>		<b>555</b>
 <b>NOMENCLATURE</b>		<b>569</b>
 <b>ANSWERS TO SELECTED PROBLEMS</b>		<b>575</b>
 <i>Index</i>		<b>579</b>
