PREFACE TO THE AUGMENTED EDITION	ix
----------------------------------	----

PREFACE	xi
---------	----

PART ONE

THERMAL RADIATION AND RADIATION PROPERTIES	1
---	---

1 THERMAL RADIATION	3
---------------------	---

1-1 Basic Laws and Definitions	3
1-2 Surface Radiation	10
1-3 Absorbing, Emitting, and Scattering Media	12
References	30
Problems	31

2 RADIATION PROPERTIES OF SURFACES	33
------------------------------------	----

2-1 Monochromatic and Total Radiation Properties	35
2-2 Directional Radiation Properties	52
2-3 Results of Electromagnetic Theory	64
References	73
Problems	75

PART TWO**RADIANT INTERCHANGE AMONG SURFACES
SEPARATED BY RADIATIVELY
NONPARTICIPATING MEDIA**

79

**3 RADIANT INTERCHANGE AMONG DIFFUSELY
EMITTING AND DIFFUSELY REFLECTING SURFACES** 81

- 3-1 The Enclosure and the Angle Factor 82
- 3-2 Interchange among Black Surfaces 83
- 3-3 Interchange among Gray Surfaces 90
- 3-4 Wavelength-Dependent Properties 103
- 3-5 Solution Methods for the Integral Equations of Radiant
Interchange 107
- References 115
- Problems 116

4 ANGLE FACTORS FOR DIFFUSE INTERCHANGE 120

- 4-1 The Defining Equations and Their Application 120
- 4-2 Contour-Integral Representation 128
- 4-3 Shorthand Methods 136
- 4-4 Angle-Factor Catalogue 142
- References 142
- Problems 143

**5 RADIANT INTERCHANGE AMONG SURFACES
HAVING SPECULAR COMPONENTS OF REFLECTION** 145

- 5-1 The Exchange Factor 146
- 5-2 Radiant Interchange in Enclosures Containing Specularly
Reflecting Surfaces and Diffusely Reflecting Surfaces 157
- 5-3 Radiant Interchange in Enclosures Containing Surfaces Having
Both Specular and Diffuse Reflectance Components 160
- 5-4 The Monte Carlo Method 164
- References 166
- Problems 167

**6 APPLICATIONS AND SOLUTIONS OF THE
EQUATIONS OF RADIANT INTERCHANGE** 170

- 6-1 Purely Radiative Systems: Cavities 171
- 6-2 Radiative-Conductive Systems: Fins 180
- 6-3 Radiative-Convective Systems: Boundary Layers and Ducts 190
- References 196
- Problems 198

PART THREE

RADIANT ENERGY TRANSFER THROUGH ABSORBING, EMITTING, AND SCATTERING MEDIA	201
7 BASIC EQUATIONS FOR ENERGY TRANSFER IN ABSORBING, EMITTING, AND SCATTERING MEDIA	203
7-1 Conservation of Energy	203
7-2 Radiation Regimes	205
7-3 Equations of Transfer	207
7-4 Radiation Flux Equation	212
7-5 Optically Thin Limit	218
7-6 Optically Thick Limit	220
7-7 Radiation Slip	222
7-8 Total Absorption and Scattering Coefficients	225
7-9 Differential Approximation	231
References	233
Problems	235
8 RADIATIVE EQUILIBRIUM	237
8-1 Gray Medium	238
8-2 Specularly Reflecting Surfaces	248
References	252
Problems	253
9 COMBINED CONDUCTION AND RADIATION	255
9-1 General Formulation	256
9-2 Limiting Solutions	259
9-3 Exponential Kernel Solution	261
9-4 Results and Discussion	267
References	271
Problems	271
10 COMBINED CONVECTION AND RADIATION	272
10-1 The Boundary Layer Energy Equation	272
10-2 Flow through Ducts	274
10-3 Nonviscous, Nonconducting Flow over a Flat Plate	281
10-4 Laminar Boundary Layer Flow	290
References	304
Problems	305

11	INFRARED RADIATIVE ENERGY TRANSFER IN GASES	307
11-1	Band Absorptance Models	307
11-2	Basic Equations	322
11-3	Radiative Transfer Illustration	326
	References	334
	Problems	335
	APPENDIXES	337
A	ANGLE FACTOR CATALOGUE	339
B	THE EXPONENTIAL INTEGRALS	351
	INDEXES	355
	AUTHOR INDEX	357
	SUBJECT INDEX	361
