PART 1. INTRODUCTION	1
1. The Translation Between Microscopic and Macroscopic Behavior	2
2. Microscopic Behaviors and Quantum States	8
A. Charge Quantization	8
B. Wave Nature of Particles	9
C. Uncertainty Principle	11
D. Quantum States and Phase Space	13
E. Quantization of Angular Momentum	18
F. Magnetic Moments	22
G. Harmonic Oscillator	24
H. Coulomb Potential	26
I. Description of a State	26
Appendix 2A. Magnetic Moment and Angular Momentum	28
PART 2. SMALL SYSTEMS	31
3. Statistics for Small Systems	32
A. Mean Values	32
B. The Binomial Distribution—Probabilities for Systems of More than One Element	35
C. Statistically Independent Behaviors	41
Appendix 3A. Stirling's Formula, Eq. 3.13	45
4. Statistics for Systems of Many Elements	47
A. Fluctuations	47
B. The Gaussian Distribution	53
C. The Random Walk	59
Appendix 4A. The Standard Deviation in Eq. 4.3	64
Appendix 4B. Taylor Series Expansion, Eq. 4.5	65
Appendix 4C. $\partial^2/\partial n^2 \ln P(n)$ at $n = \bar{n}$ , Eq. 4.6	66
PART 3. INTERNAL ENERGY	69
*5. Internal Energy and Equipartition	70
A. Internal Energy	70
B. Degrees of Freedom	71
C. The Equipartition Theorem	73

*x* *Contents*

*6. Internal Energy and the First Law	78
A. Heat Transfer	78
B. Work	80
C. Particle Transfer	83
D. The First Law	92
E. Exact and Inexact Differentials	94
F. Dependent and Independent Variables	99
PART 4. ENTROPY	103
*7. The States of a System	104
A. Equilibrium	104
B. The Fundamental Postulate	106
C. The Spacing of States	109
D. Density of States and the Internal Energy	111
Appendix 7A. $\Omega_o \propto E^{9/2}$	116
*8. Entropy and the Second Law	118
A. Microscopic Examples	119
B. Macroscopic Examples	124
C. The Second Law	126
D. Entropy	128
PART 5. INTERACTIONS	133
*9. The Thermal Interaction	134
A. Temperature and the Zeroth Law	135
B. Temperature and the Internal Energy	137
C. Temperature and Heat Flow	140
D. Temperature Scales and Boltzmann's Constant	141
E. Thermometers	143
F. Phase Transitions	146
G. Heat Reservoirs	148
H. System in Equilibrium with a Heat Reservoir	150
I. Measures of Heat Capacity	155
J. Absolute Zero and the Third Law	157
*10. The Mechanical Interaction	160
A. Change in Volume	160
B. Work and the Number of Accessible States	162
C. Other Kinds of Work	165
D. Thermal Expansion and Compressibilities	169

*11. The Diffusive Interaction	174
A. Chemical Potential	174
B. Influence of Temperature, Pressure, and Concentration	177
C. Equilibrium Conditions	179
D. The Approach to Equilibrium	180
E. Chemical Potential and the Number of Accessible States	182
F. Salty Water and Snowflakes	183
PART 6. CONSTRAINTS	189
*12. Models	190
A. Ideal Gas	191
B. Real Gases	195
C. Liquids	198
D. Solids	199
E. Other Common Systems	202
F. Sample Applications	202
F.1) Heat Capacities	202
F.2) Isothermal Compressibilities	206
13. Natural Constraints	209
A. Second Law Constraints	210
B. Maxwell's Relations	214
C. Sample Applications: Nondiffusive Interactions	222
D. Third Law Constraints	228
Appendix 13A. Maxwell's Relations	229
14. Imposed Constraints	232
A. The Reduction of Independent Variables	232
B. Isobaric Processes	237
C. Isothermal Processes	239
D. Adiabatic Processes	241
D.1) Adiabatic Processes in Gases	242
D.2) Adiabatic Processes in Liquids and Solids	245
E. Reversibility	249
F. Nonequilibrium Processes	253
F.1) Joule-Thompson (Throttling) Process	253
F.2) Free Expansion of a Gas	256
F.3) Removal of Barrier Constraints	261
15. Engines and Refrigerators	263
A. The Carnot Cycle	263
B. The Refrigeration Cycle	267

*xii* *Contents*

C. <i>p-V</i> Diagrams	268
D. Efficiencies	273
<b>PART 7. CLASSICAL STATISTICS</b>	<b>279</b>
*16. Probabilities and Microscopic Behaviors	280
A. Ensembles	280
B. Probability of Being in a Certain State	284
C. Classical and Quantum Statistics	286
D. Applications of Classical Statistics	290
D.1) Excitation Temperature	290
D.2) Degeneracy	291
D.3) Examples	292
D.4) Energy Bands	294
E. Microscopic Whim and Macroscopic Fact	297
17. Equipartition	300
A. Average Energy per Degree of Freedom	300
B. Sample Applications	302
B.1) Heat Capacity of a Gas	302
B.2) Heat Capacity of a Solid	305
B.3) Brownian Motion	306
18. Maxwell Distribution for Gases	309
A. Probability Distributions	309
B. Mean Values	314
C. Particle Distribution and Flux	316
D. Collision Frequency and Mean Free Path	319
Appendix 18A. Standard Integrals	322
Appendix 18B. Collision Frequency and Relative Motion	322
19. Transport Processes in Gases	324
A. Molecular Diffusion	326
B. Thermal Conductivity	327
C. Viscosity	330
20. Magnetic Properties of Materials	336
A. The Nature of the Atomic Magnets	336
B. Diamagnetism, Paramagnetism, and Ferromagnetism	338
C. Paramagnetism	342

21. The Partition Function	349
A. Definition	349
B. Calculation of Mean Values	350
C. Entropy and Helmholtz Free Energy	354
D. Many Subsystems and Identical Subsystems	357
E. The Partition Function for a Gas	362
Appendix 21A. The Series $\sum_n e^{-nx}$	371
22. Chemical Equilibrium	373
A. The Thermodynamical Potential	374
B. Changes in Chemical Potential	376
C. The Law of Mass Action	378
Appendix 22A. $\mu = -kT \ln \frac{\zeta}{N}$	383
23. Equilibrium Between Phases	384
A. Phase Diagrams	386
B. A Model	389
C. Pressure and Temperature Dependence of Phase Transitions	396
 PART 8. QUANTUM STATISTICS	
*24. The Occupants of Quantum States	403
A. The Occupation Number, $\bar{n}$	404
B. Comparison with Classical Statistics	409
C. The Limits of Classical Statistics	419
25. Survey of Applications	422
A. The Spectra of Accessible States	422
B. Quantum Gases	429
B.1 The Particle Distribution	429
B.2 Internal Energy and the Gas Laws	435
C. Other Quantum Systems	438
Appendix 25A. The Gas Law for Quantum Gases	439
Appendix 25B. Pressure Exerted by a Gas	441
26. Blackbody Radiation	443
A. Photons in an Oven	443

B.	Principle of Detailed Balance	448
C.	Energy Flux	450
27.	The Thermal Properties of Solids	455
A.	Lattice Vibrations	459
A.1)	The Einstein Model	459
A.2)	The Debye Model	461
B.	Conduction Electrons	470
C.	Heat Capacities	476
Appendix 27A.	The Integral (27.16)	480
Appendix 27B.	Debye Model Notation	481
28.	Semiconductors and Insulators	482
A.	Band Structure	482
B.	Electrical Properties	487
C.	Impurities	492
29.	Low Temperatures	498
A.	Attaining and Measuring Low Temperatures	500
B.	Superfluidity	508
B.1)	The Phenomenon	508
B.2)	A Model	511
C.	Superconductivity	518
C.1)	The Phenomenon	518
C.2)	A Model	519
C.3)	Stability of the Superconducting State	520
INDEX		525
