PART A

IMPERFECT BOSE GAS

by KERSON HUANG

<i>Chapter 1.</i> INTRODUCTION	3
1.1. Definition of the Problem	3
1.2. The Ideal Gases	4
1.2.1. Preliminaries	4
1.2.2. Ideal Fermi gas	8
1.2.3. Ideal Bose gas	9
1.3. Liquid Helium	15
1.3.1. The thermodynamic phases	17
1.3.2. Bose-Einstein condensation	17
1.3.3. The λ -transition	19
1.3.4. Superfluidity	20
1.3.5. Elementary excitations	21
1.3.6. Phonons	23
<i>Chapter 2.</i> METHODS OF SOLUTION	25
2.1. Cluster Expansion	25
2.2. The Method of Pseudopotentials	28
<i>Chapter 3.</i> GENERAL IMPERFECT BOSE GAS IN FIRST APPROXIMATION	32
3.1. Energy Levels	32
3.2. The Equation of State	35
<i>Chapter 4.</i> HARD-SPHERE BOSE GAS. MICROSCOPIC PROPERTIES	38
4.1. Energy Levels	38
4.2. Wave Functions	42

<i>Chapter 5.</i> HARD-SPHERE BOSE GAS. MACROSCOPIC PROPERTIES	44
5.1. The Gas Phase	44
5.2. The Equation of State	45
5.3. Superfluidity	53
5.3.1. Method of investigation	53
5.3.2. Quasi-equilibrium states	55
5.3.3. Quasi-equilibrium thermodynamics	58
5.3.4. Simple transport phenomena	63
5.3.5. Equations of hydrodynamics	64
5.3.6. Physical consequences	68
<i>Chapter 6.</i> BOSE GAS WITH ATTRACTIVE INTERACTIONS	72
6.1. General Discussion	72
6.1.1. The volume-dependence of energy levels.	72
6.1.2. N -Body bound state	74
6.1.3. The Maxwell construction	76
6.2. The Model Defined	77
6.2.1. Two-body potential	77
6.2.2. Parameters in the model	79
6.2.3. Effective Hamiltonian	81
6.3. Microscopic Properties	86
6.3.1. Ground state energy	86
6.3.2. Phonons.	87
6.3.3. Excited states	89
6.3.4. Higher-order calculations	91
6.4. Macroscopic Properties	95
6.4.1. General features	95
6.4.2. The thermodynamic phases	97
<i>Chapter 7.</i> OUTLOOK	102
References	105

PART B

A CRITICAL STUDY OF SOME THEORIES OF THE LIQUID STATE INCLUDING A COMPARISON WITH EXPERIMENT

by J. M. H. LEVELT and E. G. D. COHEN

<i>Chapter 1.</i> INTRODUCTION	111
1.1. Statement of Objective	111
1.2. Theories of the Liquid State to be Discussed	112
1.2.1. Contents of this study	112
1.2.2. Corresponding states and reduced units	114
1.2.3. Configurational and internal thermodynamic properties	115

1.3. The Experimental Data	117
1.3.1. Experimental results to be used	117
1.3.2. Reduced experimental data	119
References	120
<i>Chapter 2. DENSITY EXPANSION OF THE THERMODYNAMIC PROPERTIES</i>	121
2.1. The Virial Expansion	121
2.2. Virial Coefficients for the Lennard-Jones 6-12 Potential	123
2.3. Virial Expansion and Experiment	124
References	127
<i>Chapter 3. LIQUID PROPERTIES FROM THE RADIAL DISTRIBUTION FUNCTION IN SUPERPOSITION APPROXIMATION</i>	128
3.1. Thermodynamic Properties and Radial Distribution Function	128
3.1.1. The radial distribution function	128
3.1.2. Integral equation for the pair distribution function	129
3.1.3. Superposition approximation	130
3.2. Numerical Solution for $g(r)$	131
3.2.1. Calculation of $g(r)$	131
3.2.2. Qualitative aspects of solution	132
3.3. Comparison with Experiment	133
3.3.1. The modified potential	133
3.3.2. Method of reduction	134
3.3.3. Comparison of theory and experiment	135
3.3.4. Radial distribution function	138
3.3.5. Conclusion	140
References	141
<i>Chapter 4. THE CELL THEORY OF LIQUIDS</i>	142
4.1. Introduction	142
4.1.1. The cell model	142
4.1.2. Range of validity	143
4.1.3. Definition of terms	145
4.1.4. Outline	146
4.2. The Thermodynamic Functions in the Cell Theory	146
4.2.1. The Kirkwood integral equation	146
4.2.2. The A.M. version	149
4.2.3. The N.L. version	150
4.2.4. The A.L. version	151
4.2.5. Survey of definition and equations	151
4.2.6. Relation between N.L. and A.L. versions	153
4.2.7. Approximations in energy summations	154
4.3. Numerical Results of the Cell Theory	156
4.3.1. Survey of available results	156
4.3.2. Further calculations	157

4.3.3. Neglect of interactions with further neighbors	158
4.4. Comparison of Cell Theory and Experiment	159
4.4.1. 1- and 3-shell version	159
4.4.2. Relations between A.L. and N.L. versions	159
4.4.3. Results of 3-shell versions	160
4.4.4. Results of 1-shell versions	166
4.4.5. Cell theory and solid state	169
4.5. Discussion	172
4.5.1. Survey of the conclusions of the preceding sections	172
4.5.2. Multiple-occupation correction	173
4.5.3. Sphericalization	174
4.5.4. Critique of the cell model	175
References	177
 <i>Chapter 5. THE HOLE THEORY OF LIQUIDS</i>	178
5.1. Introduction	178
5.2. The Partition Function according to the Hole Theory. Method I	180
5.2.1. Survey of definitions and equations	180
5.2.2. The nearest-neighbor approximation	184
5.2.3. Solution of the order-disorder problem using the method of moments	188
5.2.4. Linearization approximation	189
5.2.5. The hole theory in A.M. version	191
5.2.6. The hole theory in Bragg-Williams approximation	193
5.2.7. Summary	195
5.3. The Partition Function according to the Hole Theory. Method II	196
5.3.1. Introduction	196
5.3.2. The effective potential of a binary liquid mixture	197
5.3.3. The partition function for a binary liquid mixture in the cell theory, according to method II	198
5.3.4. The partition function in the hole theory	199
5.4. Survey of Hole Theories and Discussion	201
5.4.1. Survey of available results	201
5.4.2. Random approximations in the hole theory	202
5.5. The Determination of the Number of Holes	204
5.5.1. Outline	204
5.5.2. Relation of hole theory and cell theory	205
5.5.3. Determination of the number of holes by minimizing the free energy	206
5.5.4. Relation of hole theory and cell theory for minimized free energy	207
5.5.5. The hole theory with fixed cell size	208
5.5.6. Relation of hole theory and cell theory if the cell size is fixed	208
5.6. Calculation for the Hole Theory and Comparison with Experiment	209
5.6.1. Hole theory and experiment	209

CONTENTS

XIII

5.6.2. Number of holes in various versions of the theory	211
5.6.3. The number of holes according to method II	214
5.6.4. Calculation of PV/RT if the cell size is fixed	215
5.7. Discussion	216
5.7.1. Conclusions	216
5.7.2. Number of holes and linearization approximation.	217
5.7.3. Conclusion	220
References	220
<i>Chapter 6. THE CELL-CLUSTER THEORY OF LIQUIDS</i>	221
6.1. Introduction	221
6.2. The Partition Function in the Cell-Cluster Theory	221
6.2.1. Introduction	221
6.2.2. The cell-cluster theory in the A.L. version	222
6.3. Thermodynamic Functions in Terms of the Cluster Integrals	227
6.3.1. The partition function	227
6.3.2. The combinatorial problem	228
6.3.3. The thermodynamic functions	229
6.4. Numerical Results of the Cell-Cluster Theory and Comparison with Experiment	230
References	232
<i>Chapter 7. DISCUSSION</i>	234
APPENDICES	236
1. The Thermodynamic Properties PV/RT , U_i^* and S_i^* in the N.L. ($\infty-3$) Version of the Cell Theory	236
2. Comparison of Blomgren's Hole Theory in Random Approximation with the Hole Theory of Levelt and Cohen	236

PART C**THE HEAT CONDUCTIVITY AND VISCOSITY OF POLYATOMIC GASES**
by C. S. WANG CHANG, G. E. UHLENBECK and J. DE BOER

FOREWORD	243
References	247
1. Introduction	249
2. The Boltzmann Equation	250
3. The Conservation Theorems	252
4. The Solution of the Boltzmann-Equation	253
5. The Shear Viscosity	256
6. The Dilatational Viscosity	257
7. The Heatconductivity	258
8. Transport Phenomena in the Limit of Slow Exchange between Translational and Internal Degrees of Freedom	260
9. The Relaxation Time	262
References	265
Appendix added in 1963	266
