PART A

DIAGRAM EXPANSIONS IN QUANTUM STATISTICAL MECHANICS by Claude Bloch

1.	Introduction		•	•		3
2.	Representations and Notations	•	٠	٠	•	8
Chapt	er 1. The Expansions in Powers of the Interact	TION	AND	OF T	HE	
Act	rivity		•			11
3.	Remarks on the Splitting of the Hamiltonian .					11
4.	The Dyson Expansion and its Representation in Te	rms	of Di	agra	ms	12
5.	The Expansions of Z_{gr}					20
6.	Labelled and Free Diagrams, Hugenholtz Diagram	s.				25
7.	The Expansion of $\ln Z_{gr}$	•				29
8.	The Density Matrices					33
9.	The Time-Correlation Matrices and the Green's F	unct	ions			37
10.	The Classical Limit	•		٠	•	44
Chapt	er 2. Transformed Perturbation Expansions .					49
11	The Topology of Insertions and Skeletons					49
12	Expansions in Terms of the Unperturbed Occupation	n N	umb	ers	·	55
13.	The Fourier Series Representation		unito		•	60
14.	The Time Independent Representation					73
	14.1. Transformation of the "time" integrals					73
	14.2. Cyclic invariance of the trace and rotation of	the c	liagra	ams		79
	14.3. Vanishing excitation energies and regularizat	tion				82
15.	The Zero Temperature Limit in the Fermion Case					88

Chapt	er 3. Expansions for Strong Potentials				99
16.	The Summation of Ladder Diagrams				99
17.	The Ladder Summation in the Time Dependent Exp	Dans	sions	in	
	Powers of the Activity				101
18.	Ladder Summations in other Expansions				104
19.	The Summation of Generalized Ladders. The Theory	of I	Lee a	nd	
	Yang				111
	19.1. The generalized Ursell functions				111
	19.2. The junction diagrams .				114
	19.3. The elimination of the one-body boxes	٠	·	٠	115
Chapt	er 4. Methods for Dense Systems. Renormalizat	rioi	NS A	ND	
VAI	RIATIONAL PRINCIPLES				119
20.	The Introduction of "Many-Times" External Potentials				119
21.	Self-Energy Parts as Insertions	τ.			128
22.	Formulation in Terms of Exact Propagators				136
	22.1. Fourier series representation				136
	22.2. Perturbation expansions of the self-energy operator	r.			143
23.	Variational Formulation in the Lee and Yang Theory				147
24.	Formulation in Terms of Exact Occupation Numbers				154
	24.1. Introduction of the external potential				154
	24.2. The generalized exponential functions				156
	24.3. Explicit construction of the stationary functional				167
25.	The Topological Problems for Two-Particle Insertions				175
	25.1. Introduction				175
	25.2. The ν -connectedness and the main lemma				176
	25.3. Bones and chains				179
	25.4. The linear relations between insertions		•		180
	25.5. Cycles, cyclic and acyclic relations				184
	25.6. Skeleton reduction of an insertion having no cyclic	c or	acyc	lic	
	decomposition	•	•		193
	25.7. Summery of topological results				196
26.	Variational Principles in Terms of One- and Two-parti	icle	Prop	oa-	
	gators		•		197
	26.1. Generalization of Dyson's relation for two particles				198
	26.2. Construction of the stationary functional		•	•	201
	26.3. Special forms of the theory		•		208
	26.4. Remarks on weights and symmetry numbers .	•			209

PART B

CONSTRUCTION OPERATOR FORMALISM IN MANY PARTICLE SYSTEMS

by J. de Boer

Introduction	•	•	. 215
Chapter 1. CONSTRUCTION OPERATOR FORMALISM IN OTHER FIE	LDS		. 218
1.1 Construction of Harmonic Oscillator Figenfunctions			218
1.2 Construction of Angular Momentum Figenfunctions	•	•	. 210
1.3 General Properties of Construction Operators	•	•	. 220
	•	•	. 221
Chapter 2. System of Distinguishable Particles	•	•	. 223
2.1. System of Basic Vectors in N-particle Hilbertspace.		•	. 223
2.2. Many Particle State Vector and Linear Operators .	•	•	. 224
Chapter 3. SYMMETRIZED REPRESENTATION FOR SYSTEM OF	Iden	TICA	T.
Particles.			. 228
3.1. Symmetrized System of Basic Vectors			228
3.2. Orthonormality and Completeness Relation		•	230
3.3. Symmetrized State Vectors and Operators			231
	•		0.
Chapter 4. CONSTRUCTION OPERATOR FORMALISM FOR SYN	AMET	RIZE	D
Representation		•	. 234
4.1. Construction Operators for Basic Vectors			234
4.2. Orthonormality and Completeness Relation - State Vector	ors		. 239
4.3. Construction Operator Formalism for Operators - Hami	lton	Oper	-
ator			. 240
4.4. Occupation Density and Total Number of Particles .		•	. 244
4.5. Operators in the "Grand" Hilbertspace			. 246
4.6. Creation and Annihilation of Particles			. 249
Chapter 5. Occupation Number Representation			. 252
5.1. Basic Vectors for Occupation Number Representation			. 252
5.2. Construction Operator Formalism for the Occupation	a Nu	mbe	r
Representation.			. 256
5.3. Creation and Annihilation of Particles			. 259
Chapter 6. Statistical Operator and Density Matrix .	•	•	. 262
6.1. The Statistical Operator.		•	. 262
6.2. Statistical Matrix and Density Matrix		•	. 267
6.3. Construction Operator Formalism for the Density Matrix			. 271
References			. 275

PART C

ON THE THEORY OF THE EQUATION OF STATE by Boris Kahn

Foreword by (3. E. U	Jhlenb	beck	•	•	٠		·		٠	·	•	281
Chapter 1. INTRODUCTION							•		•	289			
1. Phase Tra	ansitic	ons.											289
2. The Van	der W	aals F	Forces										291
3. Quantitat	ive R	esults	for the	e Eai	uatio	n of	Stat	е.	-				294
. <u>2</u>				1									
Chapter 2. THE PARTITION FUNCTION								•	٠		296		
1. Classical a	and Q	uantu	m The	oreti	cal F	orm	of th	ne P	Partitic	n Fui	icti	on	296
2. A Transfe	ormati	ion of	the Sla	ater S	Sum						•		299
3. Connectio	n be	etween	- Class	sical	and	Qu	ianti	ım	Theor	retical	E	x-	
pressions.	Exar	nples			·				•			•	300
4. Connectio	n be	etween	Clas	sical	and	Qu	ianti	ım	Theor	retical	ΙE	x-	
pressions.	Gene	ral Th	leory		•				٠				310
5. The Prod	uct P	ropert	у.		•				•				314
		-											
Chapter 3. THE T	HEOR	YOF	ONDE	NSAT	ION			•				•	316
1. The Prob	lem		•		•								316
2. The Deve	lopme	ent of	Ursell										318
3. The Equa	tion o	of Stat	te for ·	the V	apou	r Pl	hase						323
4. The Ideal	Einst	tein-B	ose Ga	s.									326
5. The Cond	ensat	ion Ph	nenom	enon									329
6. The Rigo	rous 🤇	Treatn	nent										333
7. Further H	Remar	ks .											337
Chapter 4. THE S	ECON	d Vir	ial Co	EFFI	CIENT	OF	a Mo	ONA	TOMIC	Gas			339
1. Introduct	ion												339
2. The Gene	ral Ey	cpressi	on for	the S	Secon	d Vi	irial	Coe	fficien	t.			339
3. Collision	Theor	v and	Trans	port	Pher	ome	ena						345
4. Oualitativ	ze Rei	marks	about	the	Phase	e Shi	fts						348
5. Born's Ar	oprox	imatio	n.										352
6 The W K	B M	ethod	First	Appr	oxim	atio	n.						354
7 The WK	BM	ethod.	Secor	nd Ar	onrox	ima	tion	•					360
8 Approxim	ation	of R.	by M	ans	of Ki	rkw	ood's	• • Me	thod	•			363
9 Approxim	ation	of B	by Me	ane o	f Kir	kwo	od'e	Met	bod	•		•	366
10 Remarks	on th		al Cal		ion	f P	ou s	met	mou	•	•	·	367
Notos	on th	e Actu	ai Car	culat	1011 0.		•	•	•	•	•	•	372
