CONTENTS

Preface vii
Introduction ix

I THERMODYNAMIC CALCULATIONS

1 Mathematical Description of Equilibrium in Multiphase—Multicomponent Systems 3

2 Methods of Solving Equations of Thermodynamic Equilibrium 13

3 Determination of Thermodynamic Properties of Mixtures and Basic Parameters of Equilibrium Processes 25

II THERMODYNAMICS OF HIGH TEMPERATURE PROCESSES

4 Thermodynamic Properties of Dissociated Gases 33

5 Reduction of Chlorides by Hydrogen 343

6 Production of Oxides from Chlorides 397

7 Reduction of Oxides by Hydrogen 461

8 Pyrolysis of Hydrocarbons and Production of Reducing Gases in the C–H System 483

9 Conversion of Hydrocarbons and Production of Reducing Gases in the C–H–O and C–H–O–N Systems 507

10 Formation of Nitrogen Oxides 549

11 Formation of Sulfur- and Chlorine-Containing Compounds 559

12 Production of Carbides, Borides, and Nitrides from Chlorides 581

References 595
Index of Calculated Systems 597
