## PART I: PRINCIPLES

<i>Chapter 1.</i> Introduction	3
Nonequilibrium Situations	5
The Porous Plug Experiment	5
Basic Premises	7
Brief Outline	8
<i>Chapter 2.</i> Monothermal Steady-Rate Processes	11
General Remarks	11
Forced Vaporization	13
Chemical Reaction	20
Other Monothermal Steady-Rate Processes	22
<i>Chapter 3.</i> The Rate of Entropy Production	26
General Remarks	26
Assumption IV	27
Degrees of Freedom	29
<i>Reprise</i>	31
Linear Current-Affinity Relationships	31
Observations	33
<i>Petit Principles of Entropy Production</i>	33
<i>Grand Principles of Entropy Production</i>	33
<i>Explorations</i>	34
<i>Equations of State</i>	37
<i>Chapter 4.</i> Migrational Equilibrium in Monothermal Fields	39
General Considerations and Conditions of Thermostatic Equilibrium	39
Concentration Field	40
Electrokinetic Relations	43

<i>Chapter 5.</i> Migrational Equilibrium in Polythermal Fields:	
The Thermomolecular Pressure Effect	46
Thermomolecular Pressure Effect	46
<i>Full-Flux Linkage</i>	51
<i>Partial-Flux Linkage</i>	51
<i>Zero-Flux Linkage</i>	51
<i>More Definitions</i>	52
<i>Treatment of Experimental Results</i>	54
<i>Conditions of Stability</i>	59
<i>Linkage Classes</i>	62
<i>Chapter 6.</i> Migrational Equilibrium in Polythermal Fields:	
General Relations	64
Definitions and Theorems	64
Alternative Considerations	69
Assumption IV	70
Assumption III	72
<i>Chapter 7.</i> Thermodynamics: The Well-Tempered Science	75
The Utility of Thermodynamics	76
Historical Conspectus	77
Head versus Hand	78
Apologia	79
<b>PART II: APPLICATIONS</b>	
<i>Chapter 8.</i> Migrational Equilibrium in Polythermal Fields:	
Applications	83
Thermoosmosis ( $\dot{W}_0 = 0$ )	83
Thermal Diffusion in Gases	86
The Clusius-Dickel Separating Column	92
Thermal Diffusion in Solutions—Soret Effect	94
Three-Component Soret Cell with Constraint, Full-Flux Linkage	99
<i>Chapter 9.</i> Thermocouples and Thermocells	104
Thermocouples	104
<i>Electrons in Homogeneous Isotropic Metallic Wires</i>	109
Zero-Flux Linkage	111
Full-Flux Linkage	112
<i>General Remarks</i>	114
Thermocells	116
<i>Chapter 10.</i> Thermal Converters and Polythermal Processes	122
Thermal Converters	122
Steady Bithermal Mass Flow with Full-Flux Linkage	128

<i>Contents</i>	xvii
<i>Chapter 11.</i> Heat Conduction	131
One-Dimensional Heat Conduction	131
Multiple Heat Currents	132
<i>Chapter 12.</i> Heat Radiation	137
General Remarks	137
Radiation Turbine	141
Inhomogeneous Radiation Field	142
Conclusion	144
<i>Chapter 13.</i> Migrational Equilibrium in Monothermal Fields:	
Applications	145
$v$ -Component Concentration Field	145
Chemical Reaction in a Concentration Field	147
Concentration Cells ("Gentle Agitation")	149
Concentration Cells with Transference ("Gentle Agitation")	151
An Example	153
<i>Chapter 14.</i> Migrational Equilibrium in Polycurrent Fields	156
General Remarks	156
Polythermal Concentration Field	157
Catalog of Binary Effects	159
PART III: COMMENTS	
<i>Chapter 15.</i> Conclusion	165
General Remarks	165
The Assumptions I-IV	166
The Stability Problem for Steady States	169
<i>Prigogine's Theorem</i>	170
<i>Oscillating or Circulating States</i>	174
Quasi-Steady States	177
"Continuous" versus "Discontinuous" Systems	178
Statistical Mechanics of the Steady State	178
Final Comments	179
APPENDIXES	
<i>Appendix A.</i> Supplementary Discussions	183
Thermotics: The Science of Heat	183
Nonlinear Current-Affinity Relations	184
Special Fields	188
<i>The Equilibrium Centrifuge</i>	190

<i>Transverse Thermomagnetic and Galvanomagnetic Effects</i>	192
The Hall Effect	193
The Nernst Effect	194
The Righi-Leduc Effect	195
The Ettingshausen Effect	197
Remark	198
<i>The Thermocouple in a Magnetic Field</i>	198
<i>Appendix B. Glossary of Terms</i>	201
<i>Appendix C. Answers to Selected Problems</i>	203
<i>Index</i>	213
