Preface iv List of symbols viii

1 Transport processes: some general principles 1 1

- 1.1 **Basic concepts**
- Phenomenological coefficients and molecular properties 1.2 8

2 Principles of non-equilibrium thermodynamics 21

- 2.1 The fundamental hypotheses 21
- 2.2 Chemical reactions in homogeneous systems 27
- 2.3 The Onsager reciprocity relationships 32
- 2.4 Application to discontinuous systems 37
- 2.5 Application to continuous systems 42
- 2.6 Frictional coefficient formalisms in isothermal systems 49

3 The phenomenology of diffusion 56

- 3.1 Diffusion in binary systems 56
- 3.2 Diffusion in multicomponent systems 64
- Intradiffusion and 'intrinsic' diffusion coefficients 3.3 71

4 The thermodynamics of diffusion in continuous isothermal systems 77

- 4.1 General considerations 77
- 4.2 Diffusion in a system of two uncharged components 78
- 4.3 Solutions of electrolytes: general considerations 86
- 4.4 Isothermal solutions containing a single electrolyte 88
- 4.5 Appendix: Concentration scales and chemical potential gradients 101

5 Experimental methods of studying diffusion processes in liquids 104

- 5.1 Steady state methods 105
- 5.2 Restricted diffusion methods 123
- 5.3 Free diffusion methods 126
- 5.4 Calculation of diffusion coefficients from optical measurements 150

- 5.5 Theory of Gouy fringe formation and interpretation of observed patterns for two-component systems 160
- 5.6 Interpretation of integral fringe patterns for two-component systems 168
- 5.7 Diffusion coefficients from shearing interferometric patterns 172
- 5.8 Interpretation of fringe patterns obtained from diffusing systems with more than two components 176
- 5.9 Electrochemical methods 184
- 5.10 Diffusion coefficients from chromatography (Taylor dispersion) 193
- 5.11 Diffusion coefficients by light scattering 199
- 5.12 Classical techniques for the measurement of intradiffusion coefficients 213
- 5.13 Nuclear magnetic resonance spin-echo measurements of intradiffusion coefficients 217
- 5.14 Rotational diffusion 234

6 Theoretical interpretations of diffusion coefficients 258

- 6.1 Hydrodynamic theories 259
- 6.2 Kinetic theories 266
- 6.3 Activation and free volume theories 284
- 6.4 Correlative and predictive equations for diffusion coefficients 290
- 6.5 Kinetic theory of diffusion in electrolyte solutions 298

7 Diffusion in binary non-electrolyte systems and in ternary mixtures 311

- 7.1 Intradiffusion coefficients: the effect of mass 311
- 7.2 Diffusion coefficients and viscosity 322
- 7.3 Self-diffusion in pure liquids 339
- 7.4 Interdiffusion and intradiffusion in non-electrolyte systems 349
- 7.5 Multicomponent diffusion 369

8 Diffusion in electrolytes 387

- 8.1 Diffusion in two-component electrolyte solutions 388
- 8.2 The interpretation of diffusion coefficients in binary electrolyte solutions 406
- 8.3 Diffusion in fused electrolytes 423
- General index 439
- Author index 444

Index of systems 447
