

## TABLE OF CONTENTS

PREFACE . . . . .	ix
PRINCIPAL NOTATION . . . . .	xi
<b>CHAPTER I. THE FUNDAMENTAL CONCEPTS AND LAWS OF CLASSICAL THERMODYNAMICS . . . . .</b>	<b>1</b>
1. The Scope and Methods of Classical Thermodynamics . . . . .	1
2. Determination of a Thermodynamic State . . . . .	3
3. The Zeroth Law of Thermodynamics . . . . .	5
4. The First Law of Thermodynamics . . . . .	6
5. The Second Law of Thermodynamics . . . . .	10
6. The Third Law of Thermodynamics . . . . .	12
7. The Properties of Multicomponent Fluids . . . . .	13
<b>CHAPTER II. GENERAL FOUNDATIONS OF NONEQUILIBRIUM THERMODYNAMICS . . . . .</b>	<b>20</b>
1. Nonequilibrium Thermodynamics and Classical Thermodynamics . . . . .	20
2. The Postulate of Local Thermodynamic Equilibrium . . . . .	22
3. Local Formulation of the Second Law of Thermodynamics . . . . .	24
4. Linear Phenomenological Equations . . . . .	28
5. The Onsager Reciprocal Relations . . . . .	33
6. Transformations of Thermodynamic Forces and Generalized Flows . . . . .	35
7. Stationary States . . . . .	42
8. The Stability of Thermodynamic Equilibrium . . . . .	50
<b>CHAPTER III. PROCESSES IN FLUID MULTICOMPONENT CONTINUOUS MEDIA . . . . .</b>	<b>57</b>
1. The General Form of Balance Equations for Extensive Quantities . . . . .	57
2. Diffusion Flux . . . . .	62
3. The Balance Equations for the Amount of Substance . . . . .	64
4. The Momentum Balance Equation . . . . .	68
5. The Energy Balance Equations . . . . .	75
6. The Entropy Balance Equation . . . . .	84
7. The Phenomenological Equations . . . . .	90
8. The Heat of Transport . . . . .	97
9. The Heat and Diffusion Fluxes in a Fluid in Mechanical Equilibrium without Chemical Reactions . . . . .	102

10. Heat Conduction and Diffusion in a Fluid in a Stationary State without Chemical Reactions . . . . .	114
11. The Rate of Change of Entropy Production in a Multicomponent Fluid . . . . .	118
12. Uniqueness Conditions for the Solution of Multicomponent Fluid Problems . . . . .	120
13. Application of the Methods of Nonequilibrium Thermodynamics to Chemical Reactions . . . . .	121
<b>CHAPTER IV. THERMOELECTRIC AND THERMOMAGNETIC EFFECTS . . . . .</b>	<b>128</b>
1. The Fundamental Equations for Unpolarized Media . . . . .	128
2. Analysis of Phenomena in an Electrical Conductor . . . . .	134
3. Thermoelectric Effects . . . . .	145
4. The Absolute Value of the Entropy of Transport of Electrons . . . . .	152
5. Thermoelectric Generators . . . . .	155
6. Thermoelectric Refrigerators . . . . .	160
7. Problems in the Development of Practical Thermoelectric Generators and Refrigerators . . . . .	165
8. Electromagnetic Effects . . . . .	167
9. Classification of Thermomagnetic and Galvanomagnetic Effects . . . . .	171
10. The Potential Applications of Nernst and Ettingshausen Effects in Generators and Refrigerators . . . . .	176
<b>CHAPTER V. THERMIONIC EFFECTS . . . . .</b>	<b>181</b>
1. The Saha Equation . . . . .	181
2. Equilibrium between Ionized Vapour and the Solid Phase . . . . .	186
3. The Potential Distribution and the Saturation Current Density between Parallel Surfaces . . . . .	188
4. The Nonequilibrium Thermodynamics of the Thermionic Diode . . . . .	195
5. The Thermionic Generator . . . . .	199
6. Problems in the Construction of Thermionic Generators . . . . .	207
<b>CHAPTER VI. NONEQUILIBRIUM THERMOELECTROMAGNETIC EFFECTS IN GASES . . . . .</b>	<b>211</b>
1. The Formation of Plasma . . . . .	211
2. The Fundamental Equations for Plasma in an Electromagnetic Field . . . . .	220
3. Phenomenological Equations for Plasma . . . . .	223
4. The Hall Effect in Gases . . . . .	228
5. Magnetohydrodynamic Generators . . . . .	232
6. Design Problems of MHD Generators . . . . .	237
<b>CHAPTER VII. NONEQUILIBRIUM EFFECTS IN DISCONTINUOUS SYSTEMS WITHOUT CHEMICAL REACTIONS . . . . .</b>	<b>239</b>
1. The Entropy Balance Equation . . . . .	239

2. Heat and Mass Transport in Discontinuous Multicomponent Systems . . . . .	242
3. Thermomechanical Effects in a One-component Fluid . . . . .	249
APPENDIX I. TENSOR NOTATION IN NONEQUILIBRIUM THERMODYNAMICS . . . . .	255
APPENDIX II. STATISTICAL DERIVATION OF THE ONSAGER RECIPROCAL RELATIONS .	255
REFERENCES . . . . .	271
INDEX . . . . .	273
