INTRODUCTION	ix
NOTE ON NOTATION	xix
CHAPTER 1. PROBABILITY DENSITIES AND THEIR EVOLUTION	1
1.1. Probability densities and averages	1
1.2. Molecular density	4
1.3. Double density	5
1.4. Examples of calculations of averages	8
1.5. Microscopic quantities	10
1.6. Intermolecular pressure	11
1.7. Liouville equation	18
1.8. Time derivatives	22
1.9. Chain of recurrence equations of motion	24
1.10. Diffusion equations	26
Conclusions	33
CHAPTER 2. OCCUPATION	35
2.1. Uncertainty in the number of particles present	35
2.2. Densities	36
2.3. Calculation of averages	38
2.4. Evolution	39
2.5. Analysis of correlations	39
2.6. The cumulant method	41
2.7. Perfect fluid	44
2.8. Molecular disorder	46
2.9. Pressure in a plasma	49
2.10. Mixtures	50
2.11. Mixtures. The case of a plasma	54
CHAPTER 3. STATISTICAL ENTROPY	58
3.1. Decoupling of a system	58
3.2. Definition of entropy	59
3.3. Fundamental inequalities for the entropy	61

Contents

3.4. Evolution of statistical entropy	64
3.5. Entropy of a system of identical particles	66
3.6. Entropy of a perfect fluid	67
3.7. Fundamental inequality for coupled systems	68
3.8. Entropy expressed as a function of reduced densities	71
3.9. Applications	77
 CHAPTER 4. CANONICAL LAWS OF THERMODYNAMIC EQUILIBRIUM	 78
4.1. Introduction	78
4.2. Microcanonical equilibrium	79
4.3. Canonical equilibrium	79
4.4. Grand canonical equilibrium	81
4.5. Neutral equilibria	83
 CHAPTER 5. THERMAL EQUILIBRIUM: SYSTEM OF IDENTICAL POINT MOLECULES	 85
5.1. Canonical distribution	85
5.2. Grand canonical distribution and partition function	88
5.3. Densities as a function of α	89
5.4. Applied energy variations	90
5.5. $h_1, h_{12}, \dots$	91
5.6. Recurrence equations of the second kind and thermalization	92
5.7. Effects of a variation of the volume	95
 CHAPTER 6. FINE STRUCTURE IN THERMAL EQUILIBRIUM	 97
6.1. Fine structure equation	97
6.2. Grand partition function	101
6.3. Density distribution	102
6.4. The case of uniform media	104
6.5. Uniform medium fluctuations	109
6.6. Experimental determination of the fine-grained structure	111
6.7. Van der Waals equation of state	113
6.8. Second virial coefficient	116
6.9. Various calculations	118
 CHAPTER 7. PHASE CHANGES	 125
7.1. Condensation	125
7.2. Critical point	129
7.3. Surface tension	132
 CHAPTER 8. THERMAL WAVES IN FLUIDS	 134
8.1. Introduction	134
8.2. Density waves	135
8.3. Momentum	139

Contents

8.4. Energy	142
8.5. Thermodynamic interpretation	143
8.6. Higher-order moments	148
CHAPTER 9. ENTROPY AND HEAT	152
9.1. Introduction	152
9.2. Evolution of statistical entropy of an isolated system	152
9.3. The H -theorem	154
9.4. Statistical entropy density	160
9.5. Thermal entropy	164
