EDITOR'S FOREWORD	xi
PREFACE	xv
INTRODUCTION: THE THEORY OF CONDENSED MATTER . . .	xvii
CHAPTER 1 LATTICE DYNAMICS IN THE HARMONIC APPROXIMATION	1
1.1 The ground state energy	2
1.2 The ground state energy as an integral over coupling constant . .	6
1.3 The neutron scattering cross-section	7
1.4 The Green's function and its equation of motion	10
1.5 The iteration solution for G	15
1.6 Summation of the iteration series	20
1.7 Calculation of the ground state energy and the neutron cross- section in terms of the phonon Green's function	25
CHAPTER 2 LATTICE DYNAMICS AT FINITE TEMPERATURES . .	29
2.1 The free energy in the harmonic approximation	30
2.2 The phonon temperature Green's function	34
2.3 The real-time Green's function and neutron scattering at finite temperatures	41
CHAPTER 3 THE FEYNMAN-DYSON EXPANSION	45
3.1 Zero-temperature theory: general formalism	47
3.2 Evaluation of the phonon Green's function at $T = 0$ by Feynman-Dyson perturbation theory	54
3.3 The Feynman-Dyson expansion at finite temperatures	60
3.4 Direct evaluation of the free energy by Feynman-Dyson perturbation theory	64
CHAPTER 4 THE SCATTERING OF FERMIONS BY A LOCALIZED PERTURBATION	68
4.1 Scattering of a single electron	69
4.2 Formulation of the many-electron scattering problem in terms of fermion creation and annihilation operators	71
4.3 Single-electron Green's function	73

4.4	Closed solution for short-range potential	78
4.5	The Friedel sum rule.	81
4.6	Many-electron formulation of the Friedel sum rule.	85
4.7	Effect of impurities on thermodynamic properties of the electron gas	90
CHAPTER 5 ELECTRONS IN THE PRESENCE OF MANY IMPURITIES —THE THEORY OF ELECTRICAL RESISTANCE IN METALS		96
5.1	The physics of irreversible behavior	96
5.2	One-electron Green's function in a many-impurity system	98
5.3	Dyson's equation	103
5.4	One-electron Green's function in low-density weak scattering approximation.	104
5.5	Theory of electrical conductivity—linear response formulation	109
5.6	Evaluation of the Kubo formula for the many-impurity problem	113
5.7	Solution of the integral equation for the response function	117
CHAPTER 6 THE INTERACTING ELECTRON GAS		123
6.1	The Hartree-Fock approximation	124
6.2	Calculation of the exchange contribution to the ground state energy of the electron gas	130
6.3	Derivation of the Hartree-Fock approximation from a perturba- tion expansion of G	132
6.4	The dielectric response function of a dense electron gas	141
6.5	The particle-hole Green's function and the random phase approximation for the dielectric response	144
6.6	The r.p.a. calculation of the correlation energy	152
CHAPTER 7 THE MAGNETIC INSTABILITY OF THE INTERACTING ELECTRON GAS		157
7.1	The Hubbard model	158
7.2	The Kubo formula for the susceptibility tensor	160
7.3	Evaluation of the susceptibility in the r.p.a.	162
7.4	The instability criterion	165
7.5	Neutron scattering and the q, ω -dependent generalized suscepti- bility function.	168
7.6	Paramagnon contribution to low-temperature specific heat	171
7.7	The ferromagnetic state	173
7.8	Localized magnetic states in metals	176
CHAPTER 8 INTERACTING ELECTRONS IN THE ATOMIC LIMIT		184
8.1	The atomic limit of the Hubbard model	185
8.2	The transition between the atomic limit and the band limit	187
8.3	The insulating magnet	189

CHAPTER 9	TRANSIENT RESPONSE OF THE FERMI GAS—THE X-RAY AND KONDO PROBLEMS	198
9.1	The x-ray singularity seen in photoemission	200
9.2	The nature of the x-ray singularity	203
9.3	The edge singularity in soft x-ray absorption and emission experiments	208
9.4	Atomic limit for localized magnetic moments in metals—the Kondo effect	212
9.5	Temperature-dependent electrical resistivity due to a magnetic impurity.	215
CHAPTER 10	SUPERCONDUCTIVITY	220
10.1	The Cooper pair instability of the fermi gas.	220
10.2	The superconducting instability at finite temperatures	222
10.3	The superconducting ground state	228
APPENDIX 1	SECOND QUANTIZATION FOR FERMIONS AND BOSONS	235
APPENDIX 2	TIME CORRELATION FUNCTIONS AND GREEN'S FUNCTIONS	242
BIBLIOGRAPHY	248
HISTORICAL NOTE ON GEORGE GREEN.	259
INDEX	262
