<i>Preface</i>	v
<i>Introduction</i>	vii

Chapter 1.	Properties of the Radial Distribution Function	
	1.1. Definition and General Properties of Distribution Functions	1
	1.2. Radial Distribution Function and Liquid Structure Function	3
	1.3. Sum Rules Involving $\rho_{\mathbf{k}}$	6
	1.4. A Fluctuation Theorem for the Ground State	11
	1.5. Examples: Ground States of Noninteracting Boson and Fermion Systems	13
	1.6. Distribution Functions under Equilibrium Conditions	15
	1.7. Necessary Conditions on the Radial Distribution and Liquid Structure Functions	18
	APPENDIX 1-A. Fourier Analysis of Fluctuations	21
	APPENDIX 1-B. Families of Radial Distribution Functions	22
	References	27

Chapter 2.	The Three Particle Distribution Function	
	2.1. Introduction	28
	2.2. Approximate Forms	29
	2.3. The Abe Form	31
	2.4. The Abe Form in the Uniform Limit	33
	2.5. The Hypernetted-Chain Approximation in the Uniform Limit	36
	2.6. A Dynamical Consistency Condition	41
	APPENDIX 2-A. A Convolution Form for $p^{(4)}$ and Asymmetrical Forms for $p^{(3)}$ and $p^{(4)}$	48
	APPENDIX 2-B. Reduction of Eq. (2.42) for $Z_3 + \frac{1}{3}F_3$	50
	References	52

Chapter 3.	The Classical Sound Field and the Correspondence Principle	
	3.1. Introduction	53
	3.2. Theory of Density Fluctuations	54
	3.3. Quantum Theory of the Continuous Medium	56
	3.4. Consequences of the Long-Range Correlations in the Particle Formulation	59

APPENDIX 3-A. Nonlocal Potential Energy in the Theory of Density Fluctuations in the Classical Fluid	64
APPENDIX 3-B. Variance and Independence in the $ \rho_{\mathbf{k}} ^2$ Space	65
References	68

Chapter 4. **Elementary Excitations in a Boson System—
Landau Spectrum**

4.1. The Bijl-Feynman Dispersion Formula	69
4.2. Consequences of Sum Rules	71
4.3. Improved Theory of the Elementary Excitations	73
4.4. Phonon-Phonon Interaction	77
APPENDIX 4-A. Sum Rules for ω^2 and ω^3	81
APPENDIX 4-B. Evaluation of the Overlap Integral $\langle \mathbf{k} - l, l 1 \mathbf{k} \rangle$ and the Interaction Matrix Element $\langle \mathbf{k} - l, l \delta H \mathbf{k} \rangle$ Eqs. (4.39) and (4.40)	92
References	95

Chapter 5. **Paired Phonon States in the Free-Phonon
Approximation**

5.1. Introduction	96
5.2. The Generalized Normalization Integral	97
5.3. Generalized Distribution Functions	98
5.4. $\rho_{\pm \mathbf{k}}$ Model Space and Matrix Elements	99
5.5. A Normalized Orthogonal Basis in “ \mathbf{k} ” Function Space	101
5.6. Evaluation of $\langle e; s, q H e; s, p \rangle$	103
5.7. Eigenvalues of H in the “ \mathbf{k} ” Function Space	104
5.8. Representation of $\rho_{\mathbf{k}}$ in Terms of Creation and Annihilation Operators	107
5.9. The Ground-State Eigenfunction	109
5.10. Evaluation of $S'(k)$	112
5.11. Consequence of $\omega(k) = 0$ in the HNC Approximation	116
APPENDIX 5-A. Matrix Elements of $\langle m', n' H m, n \rangle$	118
APPENDIX 5-B. Solution of Eq. (5.25)	119
APPENDIX 5-C. Contribution of the Three-Phonon Vertex to the Binding Energy of the Boson System	121
References	126

Chapter 6. **The Boson System at Absolute Zero**

6.1. Introduction	127
6.2. The Extremum Property of the Kinetic Energy	130
6.3. Iteration-Variation Procedure	133
6.4. The Virial Theorem	135
6.5. Numerical Results	137
6.6. Explicit Trial Functions for $g(r)$ in the Helium Problem	139
6.7. Corrections to $\langle 0 H 0 \rangle$	143
References	148

Chapter 7.

The Uniform Limit and the Charged Boson System

7.1. Introduction	149
7.2. Expectation Value of H in the Uniform Limit	149
7.3. Optimum Choice of the Liquid Structure Function ..	151
7.4. The Yukawa Potential	154
7.5. The Charged Boson System	155
7.6. First-Order Energy Correction for the Boson System ..	158
7.7. First-Order Correction to the Liquid Structure Function	160
7.8. Corrections from the "Paired-Phonon" Analysis	161
APPENDIX 7-A. Evaluation of Certain Definite Integrals ..	163
References	165

Chapter 8.

Correlated Basis Functions for Fermion Systems. Diagonal Matrix Elements

8.1. Introduction	166
8.2. The Generalized Normalization Integral	168
8.3. Additive Approximants and Cluster Integrals— Iwamoto–Yamada (IY) Formalism	171
8.4. Additive Approximants and Cluster Integrals—Aviles– Hartogh–Tolhoek (AHT) Formalism	173
8.5. Multiplicative Approximants and Cluster Integrals ..	177
8.6. Explicit Formulas for Cluster Integrals and Ground- State-Energy Quantities for Liquid ^3He	180
APPENDIX 8-A. Exponential Form of the Cluster Expansion for the Generalized Normalization Integrals	184
APPENDIX 8-B. Integration Formula for a Spherical Region ..	187
References	189

Chapter 9.

Correlated Basis Functions for Fermion Systems. Nondiagonal Matrix Elements and Perturbation Formulas

9.1. Generating Functions	190
9.2. Nondiagonal Cluster Integrals	191
9.3. Matrix Elements of the Identity	195
9.4. Matrix Elements of the Hamiltonian	200
9.5. Matrix Representations of the Identity and Hamiltonian ..	202
9.6. Evaluation of the Ground-State Energy	203
9.7. Formal Transformation to an Orthonormal Basis System	204
9.8. Method of Limited Orthogonalization	207
References	214

Chapter 10.

Low Excited States and Statistical and Transport Properties of Liquid ^3He

10.1. Quasiparticle Formulation	215
10.2. Quasiparticle Energy Spectrum	219

10.3. Summary of Formulas for Equilibrium and Transport	
Properties	225
10.4. Numerical Results	230
References	242

Chapter 11.

Theory of a ^3He Atom in Liquid ^4He at $T = 0$	
11.1. Statement of the Problem	243
11.2. Reduction of Matrix Elements	245
11.3. Numerical Evaluation of Matrix Elements and Energy	249
11.4. Effective Mass	251
11.5. The Differential Volume Coefficient.	252
References	255
