

# CONTENTS

Preface . . . . .	iii
Editor's Note . . . . .	iv
Ryogo KUBO	
The Fluctuation-Dissipation Theorem and Brownian Motion . . . . .	1
Hazime MORI	
Relaxation Phenomena near the Critical Points . . . . .	17
David PINES	
Elementary Excitations in a Homogeneous Bose Liquid, with Appilcation to He II . . . . .	36
Keith A. BRUECKNER	
Properties of Liquid Helium-Three . . . . .	65
W. KOHN	
A New Formulation of the Inhomogeneous Electron Gas Problem . . . . .	73
J. M. LUTTINGER	
A New Mechanism for Superconductivity . . . . .	86
J. Robert SCHRIEFFER	
Breakdown of the Quasi-Particle Approximation in Metals . . . . .	98
P. G. DE GENNES	
The Landau-Ginsburg Equations and the Properties of Type II Superconductors . . . . .	117
Keith A. BRUECKNER	
The Theory of Correlated Crystals . . . . .	134
Keith A. BRUECKNER	
The Present Status of the Theory of Nuclear Structure . . . . .	152
