

CONTENTS

1. Origins—The Thomas–Fermi Theory

N. H. March

1. Introduction	1
2. Electron Density–Potential Relation	2
3. Minimum Energy Principle and Chemical Potential	4
4. Properties of Atoms and Ions	7
4.1. Energy Relations	9
4.2. Total Energy	11
4.3. Relation to $1/Z$ Expansion	12
4.4. Relation between Total Energy and the Sum of One-Electron Energies	14
4.5. Behavior of Positive Ions in Extremely Strong Magnetic Fields	15
5. Molecular Energies at Equilibrium	18
5.1. Scaling of Potential Energy Terms by Kinetic Energy	18
5.2. Model of Tetrahedral and Octahedral Molecules	19
5.3. Nuclear–Nuclear Potential Energy for Tetrahedral and Octahedral Molecules	21
5.4. Total Energy and Eigenvalue Sum	22
6. Introduction of Exchange	24
6.1. Fermi Hole in Uniform Electron Gas	25
6.2. Exchange Energy from Fermi Hole	26
6.3. Thomas–Fermi–Dirac Density–Potential Relation	27
6.4. Exchange Energy in Atoms	28
7. Correlation in Thomas–Fermi Framework	29
8. Density Gradient Corrections	30
8.1. Boundary Correction to Atomic Energies	30
8.2. Test of Gradient Series in Atoms with Hartree–Fock Quality Densities	32
9. Thomas–Fermi Theory as an Approximate Summation of One-Body Perturbation Theory Based on Plane Waves	34

10. Screening of Charges in Metals and Semiconductors	36
10.1. Screening of Test Charge in Metallic Medium	36
10.2. Wave-Number-Dependent Dielectric Function	38
10.3. Electrostatic Model of Interaction between Charges in Fermi Gas	40
10.4. Relation of Vacancy Formation Energy to Debye Temperature in Simple Metals	42
10.5. Variation of Fermi Level with Concentration in Dilute Binary Metallic Alloy	45
10.6. Dielectric Function of a Semiconductor: Thomas–Fermi Model	47
10.7. Ionized Impurities in Semiconductors	49
11. Material under High Pressure	52
11.1. Equations of State from Thomas–Fermi Theory	52
11.2. Introduction of Exchange in Equation of State	54
11.3. Equations of State for Case of Incomplete Degeneracy ...	55
11.4. Generalized Thomas–Fermi Theory for Arbitrary Degeneracy	56
12. Relativistic Thomas–Fermi Theory	57
12.1. Scaling Property of Energy of Positive Ions	59
12.2. Generalization of $1/Z$ Expansion to Include Fine Structure Constant	60
Appendix A: Expansion of Binding Energy of Positive Ions about Neutral Atom Limit	62
Appendix B: Thomas–Fermi Equation in Extremely Strong Magnetic Field	63
Appendix C: Exchange and Correlation in Jellium Model	65
Appendix D: Pair Correlation Function and Exchange Energy Density in Infinite Barrier Model of Metal Surface ...	68
Appendix E: Density Gradient Treatments of “Almost Homogeneous” Electron Gas and of Model of Metal Surface	71
Appendix F: Kinetic Energy in Perturbative Series in One-Body Potential	74
<i>References</i>	75

2. General Density Functional Theory

W. Kohn and P. Vashishta

1. Introduction	79
2. Basic Theory	81

2.1. Variational Formulation	81
2.2. Self-Consistent Equations	90
2.3. Comparison with Other Theories	100
2.4. Illustrations	103
3. Extension to Magnetic Systems	108
3.1. Variational Formulation	109
3.2. Self-Consistent Equations	112
3.3. Illustrations	114
4. Multicomponent Systems	116
4.1. Formal Theory	117
4.2. Approximations for the Exchange-Correlation Energy $E_{xc}[n_1, n_2, \dots]$	119
4.3. Illustration: Electron–Hole Droplet	119
5. Generalization of Finite Temperature Ensembles	124
5.1. Formal Theory	124
5.2. Illustration: Metal–Insulator Transition	129
6. Excited States and Transport Coefficients	130
6.1. Excited States	130
6.2. Transport Coefficients	136
Appendix A: Detailed Derivation of the Self-Consistent Equations	141
Appendix B: Koopmans’ Theorem for Self-Consistent Equations	142
Appendix C: $E_{xc}[n]$ in Terms of the Pair Correlation Function	143
<i>References</i>	145

3. Density Oscillations in Nonuniform Systems

S. Lundqvist

1. Introduction	149
2. Hydrodynamical Equations for a Nonuniform Electron Gas ...	151
2.1. Bloch’s Theory	151
2.2. Extensions and Simplifications of the Hydrodynamical Model	155
2.3. Application to Photoabsorption	159
3. Response of a Nonuniform System to an External Field	163
4. Linearized Quantum Equations for Density Oscillations	169
4.1. Separation of the Instantaneous Interactions from the Retarded Response	170
4.2. Density Oscillations Based on the Density Functional Theory	173

5. Applications to Nonuniform Systems	176
5.1. Surface Plasmons in Jellium	176
5.2. Small Spherical Particles and Spherical Shells	180
5.3. Atoms and Molecules	183
<i>References</i>	187
4. Applications of Density Functional Theory to Atoms, Molecules, and Solids	
<i>A. R. Williams and U. von Barth</i>	
1. Introduction	189
2. Local-Density Approximation: Interpretation and Extensions	192
2.1. Pair Correlation Function Description of Exchange-Correlation Energy	192
2.2. Extension to Spin-Polarized Systems	213
2.3. Symmetry Dependence of Total Energy Functional	225
2.4. Almost Homogeneous Systems: Linear Response	231
3. Inhomogeneous Systems	242
3.1. Aspects of Molecular Bonding	243
3.2. Metallic Cohesion	253
3.3. Intermetallic Compound Formation	266
4. Elements of Theory of Excitations	276
4.1. Exact Results: Ground-State Eigenenergies and Certain Excitations	277
4.2. Delocalized Excitations	280
4.3. Localized Excitations: Effects of Local-Density Approximation	282
4.4. Core-Level Excitations	287
4.5. Valence-Band Spectra of Transition Metals	290
4.6. Self-Energy Approach to Calculation of Excitation Energies	294
5. Physical Models Based on Density Functional Theory	297
5.1. Chemical Potential Model of Intermetallic Compound Formation	298
5.2. Kim-Gordon Description of Interacting Closed-Shell Systems	299
5.3. Effective-Medium Theory of Chemical Bonding	299
<i>References</i>	302

5. Density Functional Approach to the Electronic Structure of Metal Surfaces and Metal-Adsorbate Systems

N. D. Lang

1. Introduction	309
1.1. Work Function	311
1.2. Surface Energy	313
1.3. Linear Response	313
2. Uniform-Background Model of Metal Surface	315
2.1. General Discussion	315
2.2. Two Sum Rules	316
2.3. Solutions	318
3. Lattice Models of Metal Surfaces	333
3.1. Perturbative and One-Dimensional Variational Solutions	334
3.2. Nonperturbative Solutions	341
4. Chemisorption on Metal Surfaces	351
4.1. Uniform-Background Model for Both Substrate and Adsorbate	352
4.2. Uniform-Background Model for Substrate	356
4.3. Lattice Model for Substrate (Perturbative Treatment) ...	374
4.4. Lattice Model for Substrate (Nonperturbative Treatment)	376
<i>References</i>	382
<i>Index</i>	391
