

Contents

PART ONE

I.	Multiple Scattering Methods. By Jerome K. Percus	3
II.	Derivation of the Brueckner Theory. By H. A. Bethe	61
III.	The Many-Body Problem. By K. A. Brueckner (abstract)	77
IV.	Energy of Interacting Fermi Systems. By C. De Dominicis and P. C. Martin	79
V.	Saturation of Nuclear Forces. By P. C. Martin and C. De Dominicis	85
VI.	Ferromagnetism of a Gas of Hard Sphere Fermions. By Joachim B. Ehrman	91
VII.	Round Table on General and Nuclear Theory.	95

PART TWO

VIII.	Transitional Methods. By Jerome K. Percus	121
IX.	Non-Separable Boundary Value Problems and the Many-Body Problem. By Leonard Eyges	157
X.	Quantum Mechanical Many-Body Problem and the Low Temperature Properties of a Bose System of Hard Spheres. By Kerson Huang, T. D. Lee, and C. N. Yang	165
XI.	The Many-Body Problem with Strong Forces. By R. Jastrow	177
XII.	Collective Variables Without Subsidiary Conditions. By C. A. Levinson and M. K. Banerjee	183

PART THREE

xiii.	Collective Methods. By Jerome K. Percus	199
xiv.	Long-Range Correlations in Classical and Quantum Systems. By N. N. Bogoliubov, D. N. Zubarev, V. V. Tolmatchev, and S. V. Tyablikov	263
xv.	Unified Theory of Interacting Bosons. By Eugene P. Gross	275
xvi.	The Collective Description of Particle Interaction. By David Pines	287
xvii.	A Collective Coordinate Method in the Many-Body Problem. By Jerome K. Percus and George J. Yevick	303

PART FOUR

xviii.	Normal States of Matter. By Jerome K. Percus	323
xix.	On Pair Correlations in Liquids. By Louis Goldstein	339
xx.	Effect of Defects on the Vibration of Crystal Lattices. By E. W. Montroll, A. A. Maradudin, and G. H. Weiss	353
xxi.	A Collective Approach to the Dielectric Constant. By Philippe Nozières (abstract)	375
xxii.	Round Table on Normal States of Matter.	377

PART FIVE

xxiii.	Superfluids. By Jerome K. Percus	403
xxiv.	Coherent States in a Degenerate Electron Gas. By Leon N. Cooper	449
xxv.	Helium II. By Lars Onsager	457
xxvi.	Boson Field Approach to the Theory of Liquid He II. By P. R. Zilsel	465
xxvii.	Round Table on Superfluids	471

PART SIX

xxviii.	Round Table on Statistical Mechanics	493
xxix.	Investigation of the Many-Body Problem by Electronic Computers. By B. J. Alder and T. Wainwright	511
xxx.	Recent Monte Carlo Calculations of the Equation of State of Lennard-Jones and Hard Sphere Molecules. By W. W. Wood, F. R. Parker, and J. D. Jacobson (abstract)	523
xxxi.	One Hundred Years of Statistical Mechanics. By Elliott Montroll	525
