Table of Contents

M.E. Fisher

Scaling, Universality and Renormalization Group Theory 1

Introduction 4

Critical Phenomena in Magnets and Fluids: Universality and Exponents 5

Scaling 21

Microscopic Models 46

Renormalization Group Theory 63

Dimensionality Expansions 100

Acknowledgments 116

Appendix A The Kac-Hubbard-Stratonovich Transformation 117

Appendix B Details of the ε-Expansion Calculation 121

Appendix C Dimensionality as a Continuous Variable 128

Appendix D Hyperscaling and Dangerous Irrelevant Variables 132

Bibliography 136

References 137

H. Thomas

Phase Transitions and Instabilities 141

Historical Introduction 142

Classical Theory 143

Symmetry Aspects 159

Mean-Field Approximation 165

Introduction to Driven Systems 173

Description of Driven Systems 177

Bifurcation from the Steady State 185

Onset of Turbulence 200

A. Aharony

Multicritical Points 209

General Review: Tricritical Points 210

General Review: Lifshitz and Bicritical Points 216

Landau Theory: Tricritical Scaling 222

Landau Theory: Other Cases 228

Renormalization Group and Scaling 232

Continuous Spins, Wilson's Renormalization Group and the Gaussian Model 236

Landau and Lifshitz Point Theories 242

The ε-Expansion 247

Results for Multicritical Points 252

The Cubic Problem 255

M.J. Stephen

Lectures on Disordered Systems 259

Percolation 260

Random Magnets 271

Random Conductors 275

Spin Glasses 280

Localization 289

A.L. Fetter

Lectures on Correlation Functions 301

X-Ray Scattering 302

Two-Body Correlations 307

Neutron Scattering 313

Linear-Response Theory 318

Dynamic Compressibility 322

Model Calculations for Density Correlation Functions 327

Fluctuation-Dissipation Theorem 332

Magnetic Phenomena; Perturbation Calculations 336

Magnetic Phenomena; Hydrodynamics Description 341

Light Scattering in Fluids 347
