

CONTENTS

PREFACE	vii
CHAPTER 1. RÉSUMÉ OF THE MANY-ELECTRON PROBLEM	
1.1. Introduction	1
1.2. The Schrödinger equation	2
1.3. Determinantal wave functions	5
1.4. Matrix elements	8
1.4.1. Matrix elements of H_0	11
1.4.2. Matrix elements of H'	13
1.5. Perturbation theory	15
CHAPTER 2. THE OCCUPATION NUMBER REPRESENTATION (SECOND QUANTIZATION)	
2.1. Creation and destruction operators	21
2.2. Occupation numbers	25
2.3. Commutation relations	27
2.4. The vacuum state	30
2.5. The Hamiltonian	31
2.5.1. Matrix elements of H_0 for a one-electron system	32
2.5.2. Matrix elements of H' for a two-electron system	33
2.6. Matrix elements of H for an N -electron system	34
2.6.1. Matrix elements of H_0	35
2.6.2. Matrix elements of H'	37
2.7. To prove that c_i and c_i^\dagger are Hermitian conjugates	42
2.8. Field operators	44
CHAPTER 3. THE HARTREE-FOCK METHOD AND THE FREE-ELECTRON GAS	
3.1. The Hartree-Fock method	47
3.2. The one-electron Hartree-Fock equation	47
3.3. The Hamiltonian and the Hartree-Fock ground-state energy	51
3.4. The free-electron gas	55
3.4.1. The kinetic energy term	56
3.4.2. The interaction term	59
3.4.3. Alternative treatment of the interaction term	60
3.5. First-order perturbation theory for a free-electron gas	61
3.6. Second-order perturbation theory for a free-electron gas	62
3.6.1. Antiparallel spins	65
	66
CHAPTER 4. PLASMA OSCILLATIONS IN A FREE-ELECTRON GAS	
4.1. Résumé of the plasma theory	70
4.2. Quantum-mechanical theory	74
4.3. The energy of the ground state	83
4.4. The correlation energy	86
4.4.1. The long-range correlation energy	87
4.4.2. The short-range correlation energy	87

CHAPTER 5. THE SCHRÖDINGER, HEISENBERG AND INTERACTION PICTURES	92
5.1. Time dependence and the Schrödinger picture	92
5.2. The Heisenberg picture	94
5.3. The interaction picture	95
5.4. The integral equation for $U(t, t')$	98
5.5. The chronological operator.	99
CHAPTER 6. THE ADIABATIC HYPOTHESIS AND THE ENERGY OF THE GROUND STATE	103
6.1. The adiabatic hypothesis	103
6.2. The ground state	104
6.3. Correspondence with Rayleigh–Schrödinger perturbation theory	106
CHAPTER 7. FEYNMAN GRAPHS	112
7.1. Creation and destruction operators in the interaction picture	112
7.2. The interaction term and the energy of the ground state	114
7.3. Particle and hole operators	116
7.4. Feynman graphs	118
7.4.1. First-order graphs	119
7.4.2. Higher-order graphs.	124
7.5. Examples of the evaluation of the contributions of various graphs to the perturbation series	127
7.5.1. First-order graphs	127
7.5.2. Second-order graphs	129
7.5.3. Third-order graphs	132
7.6. Linked and unlinked graphs	133
7.7. The vacuum–vacuum matrix element	138
7.8. Graphs which violate the Pauli principle	141
CHAPTER 8. THE LINKED GRAPH THEOREM	143
8.1. Statement and general discussion of the theorem	143
8.2. Unlinked graphs with the same unlinked parts	147
8.3. Proof of the linked graph theorem	150
8.4. The energy of the ground state	151
8.5. Intermediate states	153
8.6. Alternative formulation of the perturbation series	154
CHAPTER 9. THE CORRELATION ENERGY OF A FREE-ELECTRON GAS	158
9.1. The first-order perturbation energy	158
9.2. The second-order perturbation energy	159
9.3. The correlation energy of a free-electron gas at high densities, according to Gell-Mann and Brueckner	164
9.3.1. The perturbation series.	164
9.3.2. Summing the contributions from ring graphs	169
9.4. Comparison with the results of the plasma theory	175

CHAPTER 10. GREEN FUNCTIONS AND THE ONE-ELECTRON SCHRÖDINGER EQUATION	178
10.1. The time-independent Schrödinger equation	178
10.2. The density of states in energy	184
10.3. The Fourier transform of the free-electron Green function	187
10.4. The density of states in energy of a system subject to a small perturbation	188
10.5. Green function operators	195
10.6. Time-dependent Green functions	196
CHAPTER 11. GREEN FUNCTIONS FOR MANY-ELECTRON SYSTEMS	200
11.1. Introduction	200
11.2. The one-particle Green function	200
11.3. Elimination of the spin	204
11.4. Physical interpretation of the Green function.	207
11.5. Free-electron gas	209
11.6. Non-interacting particles	212
11.7. Differential equation for Green function of non-interacting system	215
11.8. Lehmann representation	216
11.9. The expectation value of the number operator and the existence of a Fermi surface	221
11.10. The energy of the ground state	223
11.11. The calculation of Green functions by perturbation theory	227
11.12. Equations of motion and the two-particle Green function	232
APPENDIX I. HERMITIAN OPERATORS	238
APPENDIX II. UNITARY OPERATORS AND TRANSFORMATIONS	241
APPENDIX III. A USEFUL INTEGRAL FORMULA	243
APPENDIX IV. THE SOLUTION OF INHOMOGENEOUS DIFFERENTIAL EQUATIONS BY MEANS OF GREEN FUNCTIONS	245
APPENDIX V. FOURIER TRANSFORMS	248
APPENDIX VI. CONTOUR INTEGRALS	251
APPENDIX VII. WICK'S THEOREM	257
PROBLEMS AND EXERCISES	260
BIBLIOGRAPHY	268
INDEX	269
