

Contents

PREFACE	v
I. INTRODUCTION	
II. SOLUBLE MODELS	
1. Introduction	7
2. Noninteracting fermions and bosons	8
3. Second quantization	9
4. Harmonic forces	12
III. VARIATIONAL METHODS	
1. The Hartree-Fock equations	15
2. The self-consistent field for atoms	17
3. The Thomas-Fermi method	18
4. Nuclear matter	20
5. The Hartree-Fock equations for extended systems	22
6. Alternative solutions of the Hartree-Fock equations	24
7. Jastrow's method	29
8. The shell model	30
IV. PERTURBATION THEORY	
1. General discussion	33
2. The Goldstone-Hugenholtz graphical method	35
3. Wick's theorem	38
4. Linked graphs	42
5. Rules for calculating with graphs	44
6. Hartree-Fock energies	48
7. Brueckner theory	50
8. Brueckner theory for finite nuclei	55
9. Divergence of the K -matrix	57

V. LOW-LYING EXCITED STATES

1. Green's functions and collective variables	59
2. One-particle Green's functions	60
3. Perturbation calculation of Green's functions	65
4. The optical model	69
5. The Fermi liquid	71
6. Sound and zero sound	75
7. Collective motion	78
8. Generator coordinates	82
9. Two-particle Green's functions	83
10. Time-dependent Hartree-Fock theory	88
11. Application to the shell model	90

VI. STATISTICAL MECHANICS AND SUPERCONDUCTIVITY THEORY

1. The partition function	95
2. Free fermions and bosons	97
3. Superconductivity	99
4. Model of the superconducting state	101
5. Superconducting state of a real metal	105
6. The variational principle for the partition function	108
7. Quasiparticle method	109
8. Superfluidity of liquid helium three	115
9. The effect of pairing on nuclear properties	116

VII. PERTURBATION THEORY AT FINITE TEMPERATURES

1. The Bloch equation	119
2. Linked graph expansion	120
3. Comparison with ground state perturbation theory	123
4. Expectation value of an operator	126
5. Classical limit of perturbation theory	126

VIII. GREEN'S FUNCTIONS AT FINITE TEMPERATURES

1. Excited states at finite temperatures	129
2. Calculation of Green's functions by perturbation theory	131
3. Plasma oscillations	133
4. Correlation energy	137
5. Screening	144
6. Survey of alternative techniques	146

CONTENTS

ix

7. Electrical conductivity	149
8. Collective modes in superconductors	151

IX. BOSONS

1. Introduction	153
2. Liquid helium	154
3. Phonons	160
