<b>1. Introduction.</b> By G. Alefeld and J. Völkl . . . . .	1
References . . . . .	4
<b>2. Elastic Interaction and Phase Transition in Coherent Metal-Hydrogen Alloys.</b> By H. Wagner (With 13 Figures) . . . . .	5
2.1 Background . . . . .	5
2.2 Elastic Interaction . . . . .	6
2.2.1 Lattice Model . . . . .	6
2.2.2 Continuum Model . . . . .	10
2.2.3 Incoherent and Coherent States . . . . .	13
2.2.4 Elastic Interaction in the Coherent State . . . . .	15
Infinite Continuum . . . . .	15
Finite Continuum . . . . .	16
2.2.5 Elastic Modes . . . . .	18
Isotropic Sphere with Dilatation Centers . . . . .	19
Thin Plates (Foils) and Wires with Dilatation Centers . . . . .	21
Bulk Modes . . . . .	22
2.3 Thermodynamics and Phase Transition . . . . .	22
2.3.1 Free Energy . . . . .	22
2.3.2 Phase Transition . . . . .	24
Homogeneous Phase . . . . .	24
Inhomogeneous Phase . . . . .	25
2.3.3 Discussion . . . . .	27
2.4 Fluctuations and Correlations . . . . .	30
2.4.1 Thermal Hydrogen-Density Fluctuations . . . . .	30
2.4.2 Fluctuations and Anelastic Relaxation Strength . . . . .	32
2.5 Nonequilibrium Phenomena . . . . .	33
2.5.1 Diffusion Equation . . . . .	34
2.5.2 Anelastic Relaxation . . . . .	36
2.5.3 Coherent Spinodal Decomposition . . . . .	37
2.6 Comparison with Experiments . . . . .	39
2.6.1 Phase Diagram . . . . .	40
2.6.2 Gorsky Relaxation Strength and Neutron Scattering Experiments . . . . .	41
2.6.3 Diffusion Coefficient . . . . .	46
2.6.4 Inhomogeneous Phase: Local Lattice Parameter . . . . .	47
References . . . . .	50

<b>3. Lattice Strains Due to Hydrogen in Metals. By H. Peisl (With 14 Figures)</b>	
3.1 Overview . . . . .	53
3.2 Lattice Distortions . . . . .	54
3.2.1 Strain Field of a Point Defect . . . . .	54
3.2.2 Stress Field of a Point Defect . . . . .	54
3.3 Experimental Methods . . . . .	55
3.3.1 Change of Macroscopic Dimensions . . . . .	55
3.3.2 Lattice Parameter Change . . . . .	57
3.3.3 Diffuse Scattering of X-Rays and Neutrons . . . . .	58
Huang Diffuse Scattering of X-Rays . . . . .	58
Diffuse Scattering of Neutrons . . . . .	60
3.3.4 Mechanical Relaxation Methods . . . . .	60
Gorsky Effect . . . . .	62
Snoek Effect . . . . .	62
3.3.5 Concentration Determination . . . . .	63
3.4 Experimental Results: Lattice Expansion . . . . .	64
3.4.1 Niobium . . . . .	64
3.4.2 Tantalum . . . . .	66
3.4.3 Vanadium . . . . .	67
3.4.4 Palladium . . . . .	69
3.4.5 Other Metals and Metal Alloys . . . . .	70
References . . . . .	73
<b>4. Investigation of Vibrations in Metal Hydrides by Neutron Spectroscopy</b>	
By T. Springer (With 16 Figures) . . . . .	75
4.1 General and Experimental Aspects . . . . .	75
4.2 Optic Modes in bcc Metal Hydrides . . . . .	79
4.3 Optic Vibrations in the Palladium Hydrides; Rare Earth and Other Hydrides . . . . .	85
4.4 Acoustic Phonons . . . . .	90

## 6. Mössbauer Studies of Metal-Hydrogen Systems

By F. E. Wagner and G. Wortmann (With 13 Figures) . . . . .	131
6.1 Background . . . . .	131
6.2 Some Relevant Properties of Metal-Hydrogen Systems . . . . .	132
6.2.1 Hydride Phases of the <i>d</i> -Transition Metals . . . . .	132
6.2.2 Hydrides of the Rare Earths . . . . .	136
6.3 Mössbauer Spectroscopy on Metal-Hydrogen Systems . . . . .	137
6.3.1 Mössbauer Resonances for the Investigation of Metal Hydrides . . . . .	137
6.3.2 Experimental Techniques . . . . .	139
6.3.3 The Isomer Shift . . . . .	139
6.3.4 Electric Quadrupole Interactions . . . . .	141
6.3.5 Magnetic Hyperfine Interactions . . . . .	142
6.3.6 Phase Analysis, Hydrogen Distribution, and Short-Range Order . . . . .	143
6.3.7 Hydrogen Diffusion . . . . .	145
6.3.8 Lattice Dynamics . . . . .	146

<b>6.4 Review of the Mössbauer Work on Hydrides of <i>d</i>-Transition Metals</b>	147
6.4.1 $^{57}\text{Fe}$ in Hydrides of Ni and Ni-Fe Alloys	147
6.4.2 Isomer Shifts of $^{57}\text{Fe}$ , $^{99}\text{Ru}$ , $^{193}\text{Ir}$ , $^{195}\text{Pt}$ , $^{197}\text{Au}$ , $^{151}\text{Eu}$ and $^{119}\text{Sn}$ in Hydrides of Pd and Pd-Based Alloys	148
6.4.3 Magnetism and $^{57}\text{Fe}$ Hyperfine Fields in the Pd-Fe-H System	152
6.4.4 $^{57}\text{Fe}$ in Hydrides of Nb, V, Ti, and Some Transition Metal Alloys	154
6.4.5 $^{181}\text{Ta}$ Isomer Shifts in the $\alpha$ Phase of Ta-H	155
6.4.6 Motional Narrowing of the $^{181}\text{Ta}$ Mössbauer Lines by Hydrogen Diffusion	157
<b>6.5 Mössbauer Experiments on Hydrides of the Rare Earths and Actinides</b>	159
6.5.1 Rare Earth Hydrides and Related Systems	159
6.5.2 Mössbauer Study of $\text{NpH}_{2+x}$	161
<b>6.6 Conclusions</b>	162
<b>Appendix</b>	164

## **9. Nuclear Magnetic Resonance on Metal-Hydrogen Systems**

By R. M. Cotts (With 13 Figures) . . . . .	227
9.1 Structural Information . . . . .	228
9.1.1 Nuclear Dipole-Dipole Interaction . . . . .	228
Second Moment of the NMR Absorption Spectrum . . . . .	229
Measurement of $\langle \Delta\omega^2 \rangle$ : Methods . . . . .	232
9.1.2 Nuclear Electric Quadrupole Interaction . . . . .	234
Electric Field Gradient Tensor . . . . .	234
Applications Utilizing Quadrupole Interactions . . . . .	236
9.2 Diffusive Motion of Hydrogen . . . . .	239
9.2.1 Mean Residence Times and the cw Spectrum . . . . .	239
Motional Narrowing of Dipolar Interactions . . . . .	239
Thermal Motion and Quadrupole Splittings . . . . .	241
9.2.2 Mean Residence Times and Relaxation Rates . . . . .	243
Relaxation Rate Theory . . . . .	243
Applications of Theory . . . . .	247
NMR and Quasielastic Neutron Scattering . . . . .	248
9.2.3 Direct Measurement of Hydrogen Diffusion Coefficients . . . . .	250
Two-Pulse Spin Echo Technique . . . . .	250
Multiple Pulse Technique . . . . .	252
Application to $^2\text{H}$ . . . . .	255
Identification of the Step Length . . . . .	257
9.3 Electronic Structure and NMR . . . . .	258
9.3.1 Host Metal Knight Shift and $T_{1e}$ . . . . .	258
9.3.2 K and $T_{1e}$ for Hydrogen . . . . .	259
9.3.3 Interpretations . . . . .	260
9.4 Summary . . . . .	261
References . . . . .	263
