## CHAPTER I INTRODUCTION

Flames (1). Metal vapours (2). Properties and interactions studied in flames (2). Comparison of metal vapour studies in flames and in other systems (4). Applications of metal vapour studies carried out in flames (6). Conclusion (10). Special bibliography of books dealing with analytical flame spectroscopy (11)

## CHAPTER II BASIC CONCEPTS AND GENERAL RELATIONSHIPS

1	INTRODUCTION	13
2	THE STRUCTURE AND SPECTRUM OF ATOMS AND MOLECULES (A SUMMARY)	15
2a	The Structure of Atoms	15
2a-1	Atomic Species and States	15
2a-2	Atomic Energy Levels and Degeneracy	18
2b	The Structure of Molecules	21
2b-1	Molecular Species and States	21
2b-2	Molecular Energy Levels and Degeneracy	26
2c	The Atomic Line Spectrum	30
	General (30). Optical selection rules (31). Some consequences of the selection rules (32). (Hyper-) fine-structure (33)	
2d	The Electronic Spectrum of Di-Atomic Molecules	34
	General (34). Optical selection rules (35). Description of band spectra (36)	
2e	Continuous Spectra	39
3	THE EQUILIBRIUM STATE	41
3a	Thermodynamic Equilibrium, Temperature, and Equipartition of Energy	41
3b	Equilibrium Distribution Laws	43
3b-1	The Maxwell Law of Velocity Distribution	43
3b-2	The Boltzmann Law of Internal Energy Distribution	44
	The Boltzmann law (44). Atomic internal partition function (44). Molecular internal partition functions (46)	
3b-3	The Mass-Action-Law	49

## CHAPTER II (continued)

	3b-4	The Saha Law	53
	3b-5	The Planck Radiation Law	55
3c		Relaxation; Local and Partial Equilibria	57
	3c-1	General	57
	3c-2	Relaxation	58
	3c-3	Local and Partial Equilibria	60
		Local thermodynamic equilibrium (60). Partial equilibria (60)	
4		KINETIC CONCEPTS AND PROCESSES	63
	4a	Rates and Rate Constants	64
	4a-1	Definitions	64
	4a-2	Detailed-Balance Relations between Rate Constants	68
	4a-3	Rate Constants and Relaxation	72
		First example (73). Second example (74). Other examples (75)	
	4a-4	Experimental Methods of Determining Collisional De-Excitation Rate Constants for Metal Atoms	76
		General (76). Absolute fluorescence method (76). Relative fluorescence method (77). Population-depletion method (77). Saturation method (78). Lifetime method (78). Phase-shift method (78). Discussion (79)	
	4b	Cross Sections and Rate Constants	80
	4b-1	Cross Section for Gas-Kinetic Collisions and Related Concepts	80
	4b-2	Classical Expression for the Rate Constant; Activation Energy	82
	4b-3	General Definition of Effective Cross Section of Process	85
	4b-4	Microscopic-Reversibility Relation	88
	4c	Activated Complex Theory	89
	4d	Potential Energy Surfaces	91
	4e	Pseudo-Crossing of Potential Energy Curves	93
	4f	Processes through Potential-Curve Crossing	95
		General (95). Selection rules (96). Transmission coefficient (96). Activation energy (99). Effective cross section (99). Multiple crossings; ionic-curve crossing (99). Concluding remarks (102)	
	4g	Resonance Processes	102
	4h	General Classification of Processes	103
5		THE INTENSITIES OF RADIATIVE TRANSITIONS	110
	5a	Types of Radiative Transitions and their Rate Constants	110
	5a-1	Radiative Transitions and Einstein Radiation Coefficients for a Single Atomic Line	110
		Types of radiative transitions (110). Light scattering and fluorescence (113). Case of weak radiation field (116). Case of strong radiation field (117). Einstein radiation coefficients (117)	
	5a-2	Oscillator Strength, Absorptivity, and other Parameters related to the Einstein Radiation Coefficients	123
		Radiative lifetime (123). Oscillator strength (124). Absorptivity (125). Net absorptivity (absorption and induced emission combined) (130)	
	5a-3	Radiative Rate Constants for Atomic Multiplets and Molecular Bands	133
		Atomic multiplets (133). Molecular bands (134)	
	5b	Causes of Line Broadening and Shapes of Spectral Line Profiles	138
	5b-1	General	138

## CHAPTER II (continued)

5b-2	Causes of Line Broadening and Associated Spectral Distribution Functions	141
	Natural broadening (141). Radiation Broadening (144). Collision broadening (145). Doppler broadening (152)	
5b-3	The Combination of Broadening Effects; the Voigt Line Profile	154
	The combination of Lorentzian profiles (154). The combination of Lorentzian and Doppler profiles; the Voigt line profile (155)	
5c	Spectral Line Intensity in Absorption, Emission, and Fluorescence	158
5c-1	General	158
5c-2	The Strength of Absorption	159
	Absorption line profile; Beer's law (159). Absorption factor with arbitrary spectral source profile (164). Peak absorption (164). Integral absorption (166). Curve-of-growth (COG) (169). Saturation (173)	
5c-3	The Intensity of Thermal Emission and Self-Absorption; the Line-Reversal Temperature	175
	Definition of thermal radiation (175). Self-absorption and radiation diffusion (176). Thermal emission intensity of atomic lines (without self-absorption) (178). Thermal intensity of molecular emissions (without self-absorption) (179). Thermal emission intensity of atomic lines (with self-absorption) (182). Self-reversal (187). Quantities determinable from thermal emission intensity (188). The line-reversal method (190). Conclusions (191)	
5c-4	The Intensity of Fluorescence	192
	The efficiency of fluorescence (192). The intensity of fluorescence (general) (194). The intensity of fluorescence (without self-absorption) (195). The intensity of fluorescence (with self-absorption) (198). Case of continuum source (200). Case of narrow-line source (201). Intensity of fluorescence under saturation conditions (202). Conclusion (207)	

## CHAPTER III GENERAL INSTRUMENTAL ASPECTS AND EXPERIMENTAL METHODS 209

1	INTRODUCTION	209
2	BURNERS AND NEBULIZERS	211
2a	Introduction	211
2b	Premix Burners for Laminar Flames at 1 atm Pressure	212
	2b-1 General	212
	2b-2 Méker Burners	213
	2b-3 Porous Plate-Burners	220
	2b-4 Slot Burners	220
2c	Low-Pressure Burners	221
2d	Burner Mounting and Adjustment	223
2e	Nebulizers	224
	2e-1 Construction and Operation	224
	2e-2 Properties and Utility	226
	2e-3 Nebulizers for Low-Pressure Flames	229
2f	Preparation of Metal Salt Solutions	230
2g	Regulation and Calibration of Gas Flows	230
	Regulation (230). Calibration (233)	
2h	Overall Performance of Nebulizer-Burner Systems	234

## CHAPTER III (continued)

3	SPECIAL TECHNIQUES OF SEEDING A FLAME	236
3a	Introduction of Dry Metal Salt Aerosols (without Solvent)	236
3a-1	Nebulization followed by Removal of Solvent	236
3a-2	Direct Evaporation of Solid Metal Salts	237
3b	Other Special Seeding Techniques	238
	Twin nebulizers (238). Hieftje droplet generator (238).	
	Liquid bubble method (239). Introduction of halogens (239)	
4	THE OPTICAL TRAIN	240
4a	Introduction	240
4b	Figures of Merit for Monochromators	241
4c	Distortion of the Spectral Energy Distribution	248
4d	Alignment and Area Selection	250
4e	Polarization Effects	253
4f	Special Optical Systems and Techniques	253
	Double-monochromator (253). Intensity-modulation (253).	
	Double spatial-beam techniques (254). Double spectral-	
	beam (or dual-wavelength) techniques (255). Derivative	
	spectroscopy (256). Rapid-scan and recording methods (258).	
	Multiplexing methods (259). Selective-modulation techniques	
	and resonance monochromator (260)	
5	PHOTODETECTORS AND NOISE	261
5a	Introduction	261
5b	General Characteristics of Photomultiplier Tubes	264
	Photo-emission (264). Secondary-electron emission (264).	
	Dark current (266). Pulse counting (266)	
5c	Noise	268
	Shot noise; spectral noise power (268). Secondary-emission	
	noise (271). Flicker noise (272). Johnson noise (272)	
5d	Practical Considerations	273
	Selection (273). Technique of measuring (274). Reduction	
	of dark current (275). Mounting and operation (276)	
6	THE ELECTRICAL MEASURING SYSTEM	277
6a	Introduction	277
6b	General Measuring Systems	278
7	LIGHT SOURCES FOR ABSORPTION AND FLUORESCENCE MEASUREMENTS	285
7a	General	285
7b	Spectral Continuum Sources	286
7b-1	Tungsten Strip Lamp	286
7b-2	Tungsten Brush Lamp	287
7b-3	High-Pressure Xenon Arc Lamp	287
7b-4	High-Pressure Mercury Arc Lamp	288
7b-5	Other Continuum Sources	288
7c	Spectral Line Sources	289
7c-1	Hollow-Cathode Lamp (HCL)	290
7c-2	Low-Pressure Metal Vapour Discharge Lamp	292
7c-3	Electrodeless Discharge Lamp (EDL)	293
7c-4	Lasers	296
7c-5	Other Spectral Line Sources	296
7d	Survey of Characteristics of Spectral Line and Continuum Sources	298
8	MEASUREMENT OF THE NEBULIZATION EFFICIENCY	302
8a	General	302
8b	Methods of Measurement	303

## CHAPTER III (continued)

9	RELEASE OF METAL VAPOUR FROM AEROSOL	306
9a	Desolvation of Wet Aerosol	306
9b	Methods for Checking (In-)Complete Desolvation	307
9c	Volatilization of Dry Aerosol	309
	Formation of dry aerosols (310). Factors controlling the volatilization (311)	
9d	Methods for Checking (In-)Complete Volatilization	313
10	THE MEASUREMENT OF FLAME TEMPERATURE	315
10a	Equilibrium Considerations	315
10b	The Translational or 'True' Temperature	316
10c	The Excitation Temperature	317
	10c-1 The Two-Line Method (in Emission)	317
	10c-2 The Slope Method	318
	10c-3 The Emission-Absorption Method	318
	10c-4 Methods using Fluorescence	319
	10c-5 The Method of Line-Reversal	320
	The measurement of line-reversal temperature (320). Background light sources (323). Systematic errors (324). Random errors (325)	
10d	The Measurement of Temperature-Distributions	326
11	THE DETERMINATION OF THE RISE-VELOCITY OF THE BURNT FLAME GASES	329
12	THE MEASUREMENT OF THE FLAME THICKNESS AND OF THE DISTRIBUTION OF METAL VAPOUR IN THE FLAME	332
	Definition of flame thickness (333). Measurement of spatial distribution (333). Description of spatial distributions (334)	
13	METHODS FOR CHECKING THE LINEARITY OF A PHOTO-ELECTRIC MEASURING SYSTEM	336
14	THE MEASUREMENT OF EMISSION	339
14a	Introduction	339
14b	Geometrical Considerations in Emission Measurements	341
14c	The Optical Train	343
14d	Expressions for the Signal Strength	343
14e	Error Sources in Emission Measurements	344
14f	Optimization of the SNR	346
	14f-1 Introduction	346
	14f-2 D.C. Measurement in the Presence of Background Shot Noise	348
	14f-3 D.C. Measurement in the Presence of Background Flicker Noise	355
	14f-4 A.C. Measurement in the Presence of Background Noise	359
14g	The Measurement of Absolute Intensities and Intensity Ratios	362
	Absolute intensities (362). Intensity ratios (364). Radiation standards (365)	
15	THE MEASUREMENT OF ABSORPTION	368
15a	Introduction	368
15b	General Outline of Set-Ups used for Absorption Measurements	369
	15b-1 Single-Beam Set-Up	370
	15b-2 Double-Beam Set-Up	371
15c	Detailed Discussion of Components of the Experimental Set-Up	376
	15c-1 Light Sources	376
	15c-2 Optical Beam Formation	377
	15c-3 Modulation and Beam Splitting	378

CHAPTER III (continued)		
15c-4	Detection	379
15c-5	Stability	380
15c-6	Interference from Thermal Metal Emission and Flame Background	381
15c-7	Systematic Error Sources	382
15d	Signal-to-Noise Ratio Considerations and their Application in the Optimization of Experimental Conditions in Absorption Measurements	383
15d-1	Case I: Measurement of Integral Absorption of an Atomic Metal Line	384
15d-2	Case II: Measurement of Absorption Factor with a Narrow- Line Source	387
16	THE MEASUREMENT OF FLUORESCENCE	390
16a	Introduction	390
16b	The Measurement of Fluorescence Efficiency	393
16c	Optimization of SNR	400
CHAPTER IV TYPES AND PROPERTIES OF NONSEEDED FLAMES		413
1	INTRODUCTION	413
2	GENERAL TYPES OF FLAMES	417
3	THE STRUCTURE OF PREMIXED LAMINAR FLAMES Primary combustion or inner zone (419). Interzonal region or central region (422). Secondary combustion or outer zone (423)	419
4	CALCULATION OF EQUILIBRIUM COMPOSITION AND ADIABATIC TEMPERATURE	424
4a	Introduction	424
4b	Methods of Calculating Equilibrium Composition and Adiabatic Temperature Equilibrium composition (425). Adiabatic temperature (427)	425
4c	Results of Equilibrium-Composition and Adiabatic- Temperature Calculations	428
5	DEVIATIONS FROM FLAME EQUILIBRIUM COMPOSITION	434
5a	Introduction	434
5b	Methods of Evaluating Radical Concentrations	437
5b-1	General	437
5b-2	Concentration of H Radicals	440
5b-3	Concentration of OH Radicals	443
5b-4	Concentration of O Radicals	445
5b-5	Conversion of Relative into Absolute Radical Concentrations	448
5c	Some Observations on Excess Radical Concentrations and their Relaxation Rates	451
6	MEASURED FLAME TEMPERATURES	455
6a	Causes of Differences between Calculated and Measured Flame Temperatures	455
6b	Inhomogeneities in Temperature	459
7	NATURAL FLAME IONIZATION	460
	General (460). Ion concentration (460). Identity, forma- tion, and decay of ions (461)	
8	FLAME BACKGROUND SPECTRUM	465
	General (465). (Quasi-)continuum background spectrum (467)	
9	FLUCTUATIONS IN THE FLAME EMISSION	470
	General (470). Excess low-frequency noise and shot noise (471). Figure-of-merit (472). Experiments (475)	

CHAPTER V	DETERMINATION OF METAL CONCENTRATION IN THE FLAME	479
1	INTRODUCTION AND DEFINITIONS	479
2	SPECTROMETRIC DETERMINATION OF ABSOLUTE METAL CONCENTRATION	481
2a	The Absolute-Intensity Method	481
	Case of negligible self-absorption (481). Inhomogeneity of temperature and concentration (482). Case of strong self-absorption (484)	
2b	The Integral-Absorption Method	486
	Description (486). Comparison of the absolute-intensity and the integral-absorption method (489)	
2c	The Peak-Absorption Method	491
	Description (491). Comparison of the peak-absorption and the integral-absorption method (495)	
2d	Curve-of-Growth Methods (in Emission and Absorption)	495
	Description (495). Distortion of the experimental COG (499)	
2e	Duplication Methods	504
3	SPECTROMETRIC DETERMINATION OF CONCENTRATION RATIOS	508
3a	Concentration Ratios of One Species	509
	3a-1 Intensity Measurements	509
	3a-2 Absorption Measurements	510
3b	Concentration Ratios between Different Species	511
	3b-1 Intensity Measurements	512
	3b-2 Absorption Measurements	512
4	SPECIAL METHODS OF DETERMINING ABSOLUTE METAL CONCENTRATIONS	513
4a	Use of the Saha Equation for Ionization Equilibrium	513
4b	Other Methods	515
5	CALCULATION OF ABSOLUTE METAL CONCENTRATION FROM MEASURED SALT SUPPLY	515
5a	Calculation of Metal Concentration from Measured Nebulization Efficiency	515
5b	Calibration of Metal Supply with Weighed Beads of Salt and some Other Methods	519
6	THE COMPARISON METHOD AND ELEMENTS SUITABLE AS FULLY ATOMIZED STANDARDS	520
	General (520). Sodium as fully atomized standard element (523). Silver as fully atomized standard element (525). Copper as fully atomized standard element (526). Other elements (526). Conclusion (527)	
CHAPTER VI	EXCITATION AND DE-EXCITATION OF METAL SPECIES	529
1	INTRODUCTION	529
	Survey and terminology (529). Importance of (de-)excitation studies (532). Advantages and disadvantages of flame studies (533)	
2	PHYSICAL EXCITATION AND DE-EXCITATION PROCESSES	534
2a	(De-)Excitation of Electronic States through Conversion of Translational Energy only	536
2a-1	Quenching and Excitation by Collisions with Unexcited Atoms and Molecules	536
	Experiments relating to the lowest excited level (537). Experiments relating to higher excited levels (539). Theory (544). Conclusions (547)	

## CHAPTER VI (continued)

2a-2	Mixing of Multiplet Components by Collisions with Unexcited Atoms Experiments (548). Theory (552). Self- and mutual mixing (555). Conclusions (556)	548
2a-3	Quenching and Excitation by Collisions with Free Electrons	556
2b	(De-)Excitation of Electronic States Involving Conversion of Internal Energy of Collision Partner	560
2b-1	Introduction	560
2b-2	Quenching and Excitation by Collisions with Molecules General (561). Experiments (565). Alkali atoms (565). Hg atoms (569). Other atoms (570). The participation of internal molecular energy (570). Resonance effects (577). Conclusions from the experiments (580). Theory (581)	561
2b-3	Mixing of Multiplet Components by Collisions with Molecules Experiments (593). Theory (596). Conclusions (598)	593
2b-4	Electronic-Excitation Transfer between Dissimilar Atoms upon Collision Experiments (600). Theory (602)	599
	TABLE VI.1 Cross Sections of Collisional (De-)Excitation Processes	603
2c	Radiative (De-)Excitation of Electronic States	619
2c-1	General Expressions for the Radiative (De-)Excitation Rates	619
2c-2	General Dependence of Radiant Density on Excited-State Population (Flame as the only Source of Radiation)	622
2c-3	General Dependence of Excited-State Population on Radiant Density and on Fluorescence Efficiency	624
2c-4	Approximate Solution when the Flame is the only Source of Radiative Excitation	626
2c-5	Approximate Solution for a Flame Irradiated by an External Light Source Case of conventional light sources (no saturation) (628). Case of laser sources (with saturation) (630)	628
3	CHEMICAL EXCITATION AND DE-EXCITATION PROCESSES (CHEMILUMINESCENCE)	634
3a	Introduction	634
3b	Hard Chemiluminescence	635
3b-1	Chemi-Excitation Reactions in which only Atomic Metal Species are Involved	635
3b-2	Chemi-Excitation Reactions Involving Metal Ions	638
3b-3	Chemi-Excitation Reactions Involving Metal Compounds	639
3c	Soft Chemiluminescence	641
3c-1	Qualitative Considerations	641
3c-2	Quantitative Considerations Rate constants of chemi-excitation reactions (643). Rate constants of chemiquenching reactions (647). Discussion of some experimental rate constants (649)	643
3c-3	Reactions Involving a Metal Compound Conclusion (652)	650
4	NONTHERMAL RADIATION OF ATOMIC LINES	652
4a	On the Concept of 'Thermal Radiation'	652
4b	Relationship between Outgoing Radiation Intensity and Excited-State Population	654

## CHAPTER VI (continued)

4c	Causes and Conditions of Nonthermal Radiation	657
4c-1	Nonthermal Radiation due to a Relaxation in the Excited-State Population	658
4c-2	Nonthermal Radiation caused by Nonequilibrated Physical (De-)Excitation Processes	659
4c-3	Suprathermal Radiation caused by Nonequilibrated Chemiluminescent Reactions	663
	Case of (induced) chemiluminescence through 3-body association reaction (664). Factors influencing suprathermal chemiluminescence (665). Case of (true) chemiluminescence through 2-body exchange reaction (667). Extra Doppler broadening (668)	
4d	Experimental Methods of Evaluating Nonthermal Radiation	668
4e	Some Conclusions for the Analytical Application of Flame Emission Spectroscopy	673

## CHAPTER VII BROADENING AND SHIFT OF ATOMIC METAL LINES 677

1	INTRODUCTION	677
2	THEORETICAL	679
2a	Formulation of the Problem	679
2b	Collision Broadening	682
2b-1	General Considerations	682
2b-2	Survey of Collision Broadening Theories	683
2b-3	Semi-Classical (SC) Theories of Collision Broadening	683
	2b-3.1 Impact Approximation	685
	2b-3.2 Quasi-Static (QS) Theories of Adiabatic Line Broadening	690
	2b-3.3 General-Pressures Theories of Adiabatic Line Broadening	692
2b-4	Quantummechanical (QM) Theories of Collision Broadening	695
2b-5	The Line Profile due to the Simultaneous Action of Natural, Doppler, Adiabatic and Diabatic (Foreign Gas) Collision Broadening	700
2b-6	Influence of $J$ - and $M_J$ -Mixing Collisions on the Line Profile	702
2b-7	(Integrated) Line Profiles with H.F.S.	704
2b-8	The Occurrence of Satellite Bands	705
2b-9	Extra Doppler Broadening of Nonthermal Emission Lines	708
3	EXPERIMENTAL	710
3a	Determination of Emission Line Profiles in Flames	710
	3a-1 Scanning Interferometer	710
	3a-2 Scanning Monochromator	712
3b	Determination of Absorption Line Profiles in Flames	712
	3b-1 Scanning Interferometer	712
	3b-2 Zeeman Scanning	714
	3b-3 Scanning Monochromator	715
	3b-4 Tunable Dye Laser	716
3c	Determination of Line Widths from Integrated Line Intensities	718
	General (718)	
	3c-1 Emission Curve-of-Growth	719
	3c-2 Absorption Curve-of-Growth (Relative)	719
	3c-3 Duplication Curve	719
	3c-4 Emission Curve-of-Growth plus Absolute Integral Absorption	720
	3c-5 Absorption Curve-of-Growth (Absolute)	720
	3c-6 Emission Curve-of-Growth plus Duplication Curve	720

## CHAPTER VII (continued)

	3c-7	Fluorescence 'Curve-of-Growth'	721
	3c-8	Integral Absorption plus Peak Absorption	722
4		RESULTS FROM FLAME EXPERIMENTS IN COMPARISON WITH NON-FLAME RESULTS AND WITH THEORY	722
	4a	Comparison of Line Profiles Measured in Flames with Theoretical Models	723
		Broadening effect of $J$ -mixing and quenching collisions in flames (723). Line-core and very near line-wing profiles (725). Far-wing profiles (729). Confrontation with theory (732). Conclusions about line wings (732). Satellites (733). Adequacy of the Voigt model (733). Validity of Kirchhoff's law (736)	
	4b	Comparison of some Nonflame Line-Broadening Experiments with Theoretical Models	736
	4c	Derivation of Force Constants of (Difference) Interaction Potentials from Line Profiles	739
	4d	$\alpha$ -Parameters and (Adiabatic) Line-Broadening Cross Sections Derived from Flame Experiments	742
	4e	Experimental $\alpha$ -Parameters Obtained in Analytically Useful Flames	747
	4f	Observations of the Effect of Hyper-Fine-Structure on Line Profile and Curve-of-Growth in Flames	749
CHAPTER VIII FORMATION OF METAL COMPOUNDS			751
1		INTRODUCTION	751
2		METHODS OF DETERMINING DISSOCIATION ENERGIES ( $D_0$ ) AND VALUES REPORTED	754
	2a	Methods of Determining $D_0$	754
		2a-1 I. Molecular Methods	755
		2a-2 II. Thermochemical Methods	760
	2b	Reported Values of $D_0$	764
3		KIND AND ABUNDANCE OF METAL COMPOUNDS	770
	3a	Metal Oxides	771
	3b	Metal Hydroxides and Hydrides	775
	3c	Metal Halides	779
4		FORMATION REACTIONS OF METAL COMPOUNDS	783
	4a	General Considerations of Metal Compound Formation	784
		4a-1 General Kinetic Considerations	784
		4a-2 Determination of Dominant Reaction Path from Variation of Association Factor with Height	787
		4a-3 Determination of Dominant Reaction Path from Dependence of Association Factor on $T$ and Flame Composition	789
	4b	Survey of Formation Reactions for Specific Metal Compounds	791
		4b-1 Metal Oxides	791
		4b-2 Metal Hydroxides	793
		4b-3 Metal Hydrides	794
		4b-4 Metal Halides	795
5		FLAME SPECTROMETRIC DETERMINATION OF DISSOCIATION ENERGIES	796
	5a	Flame-Spectrometric Equilibrium Method	797
	5b	Some Typical Applications of the Flame-Spectrometric Equilibrium Method	802
		5b-1 Determination of $D_0$ (LiOH)	802
		5b-2 Determination of $D_0$ (BaCl)	805
		5b-3 Determination of $D_0$ (SrOH)	806
		5b-4 Simultaneous Determination of $D_0$ (CaOH) and $D_0$ [Ca(OH) <sub>2</sub> ]	808
		5b-5 Simultaneous Determination of $D_0$ (BaO) and $D_0$ (BaOH)	809
		5b-6 Conclusion	812

CHAPTER IX	IONIZATION IN SEEDED FLAMES	813
1	INTRODUCTION	813
2	SURVEY OF IONIZATION PROCESSES	817
2a	Classification and Examples of Ionization Processes	817
2b	Factors Controlling the Probability of an Ionization Process	826
3	SOME USEFUL THEORETICAL RELATIONSHIPS	828
3a	Electric Conductivity	829
3b	Thermal Ionization	832
3b-1	Case of a Single Metallic Element Forming no Compounds	832
3b-2	Ionization Interference between Two Metallic Elements	833
3b-3	Case of a Metallic Element Forming Neutral as well as Ionized Atoms and Compounds	834
3c	Ionization Relaxation	837
	Case A (838). Case B (843). Case C (844)	
3d	Conditions for Thermal Ionization and Causes of Nonthermal Ionization	846
	Thermal ionization (846). Ionization relaxation (846). Physical and chemical disequilibrium (847). Conclusion (849)	
4	EXPERIMENTAL TECHNIQUES	850
4a	Survey of Experimental Techniques	850
4b	Detailed Discussion	854
	Optical spectrometry (854). Ion mass spectrometry (855). Electrostatic probe technique (857). R.f. resonance technique (861). Cyclotron-resonance technique (862). Microwave-cavity resonance technique (863). Microwave attenuation technique (863)	
5	EXPERIMENTAL RESULTS	864
5a	Measurements of Ionization and Ion-Recombination Rate Constants with Metallic Additives	864
5a-1	Case A	866
5a-2	Case B	869
5a-3	Case C	876
5b	Survey of Further Ionization Experiments with Additives in Flames	880
6	DISCUSSION AND CONCLUSIONS	882
6a	Conclusions from and Intercomparison of Ionization and Recombination Rate Constants of Alkali Atoms Measured in Flames	882
6a-1	Some General Conclusions; the Original Ladder Model of Hollander <i>et al.</i>	882
6a-2	Intercomparison of Standardized Experimental $k_i(T)$ Values	886
6a-3	Comparison of $E_{ion}$ and $E_A$ ; $T$ -Dependence of $k_i$ and $k_r$	888
6a-4	The Experimental Ionization Cross Sections	890
6b	Comparison of Experiment with Theory	892
6b-1	A Theoretical Discussion of the Ladder Model and the Summation Rule in Multi-Component Flames	892
6b-2	The Ionization Efficiency of Ar	898
6b-3	Expected Sequence of $\sigma_{i,j}$ Values for Different Alkali Atoms	898
6b-4	The Activation Energy and the Ionic-Curve Crossing Model of Ionization	899
	Qualitative considerations (899). Quantitative considerations (902)	
6c	Consequences of Metal Ionization in Flames	903
6c-1	Consequences for other Metal Vapour Studies	903
6c-2	Consequences in Analytical Flame Spectroscopy	905

CHAPTER X	DIFFUSION	909
1	INTRODUCTION	909
2	THEORETICAL ESTIMATE OF DIFFUSION COEFFICIENTS	911
3	MODEL CALCULATIONS OF ATOMIC DISTRIBUTIONS	914
	3a Diffusion from a Point Source in a Laminar Flame	914
	3b Diffusion from a Line Source in a Laminar Flame	916
	3c The Validity of the Models in Actual Flame Experiments	917
4	MEASUREMENTS OF DIFFUSION COEFFICIENTS IN FLAMES	918
	4a Measurements in Simple Situations	918
	4b Measurements in More Complex Situations	919
5	THE IMPORTANCE OF DIFFUSION IN METAL VAPOUR EXPERIMENTS	921
APPENDICES		923
A.1	CONVERSION FACTORS OF INCOHERENT UNITS	923
A.2	SOME FUNDAMENTAL CONSTANTS	924
A.3	LIST OF SYMBOLS AND TERMS USED	925
A.4	IONIZATION ENERGIES AND SPECTRAL LINE CHARACTERISTICS OF SOME METAL ATOMS	939
A.5	GENERAL RADIANT QUANTITIES	943
A.6	THE CONCEPT OF OPTICAL CONDUCTANCE	945
	A.6-1 Radiating Surface $S$ of Arbitrary Shape in Combination with Stop $D$	945
	A.6-2 Flat Surface $S$ Radiating into Cone $C$	946
	A.6-3 Sphere Radiating into Free Outside Space	946
A.7	DERIVATION OF EXPRESSIONS FOR SIGNAL-TO-NOISE RATIO (SNR)	947
	A.7-1 General SNR Expression for Paired D.C. Meter Readings	947
	A.7-2 SNR Expression for Paired Readings on a D.C. Meter with Exponential Step Response in the Case of 'White' Noise	949
	A.7-3 SNR Expression for Paired Integrator Readings in the Case of 'White' Noise	950
	A.7-4 SNR Expression for Paired Readings on a D.C. Meter with Exponential Step Response in the Case of Flicker Noise	950
	A.7-5 SNR Expression for Paired Integrator Readings in the Case of Flicker Noise	951
A.8	SPECTROGRAMS OF THE VISIBLE BANDS OF Ca, Sr AND Ba IN FLAMES	953
A.9	DERIVATION OF RELAXATION EQUATION INCLUDING NEGATIVE-ION FORMATION	957
