PREFACE	vii

The Use of Epitaxial Films in Physical Investigations

J. C. ANDERSON

1. Introduction	1
2. Growth and Structure	2
3. Electrical Properties	3
A. Metals	3
B. Semiconductors	4
C. Insulators	5
4. Magnetic Properties	5
5. Mechanical Properties	6
6. Optical Properties	6
7. Conclusion	7
References	7

Part I. FILM PREPARATION

Methods of Preparing Thin Films

D. S. CAMPBELL

1. Introduction	11
2. Electrolytic Deposition	11
3. Electroless Deposition	12
4. Anodization	13
5. Vapour Phase Deposition	16
6. Evaporation	18
7. Sputtering	20
8. Conclusions	25
References	26

The Preparation of Epitaxial Films by Evaporation and Cathodic Sputtering

M. H. FRANCOMBE

1. Introduction	29
2. Epitaxial Films for Physical Measurements	30
A. Film materials of interest	31
B. Importance of growth conditions	33

3. Preparative Techniques	38
A. Evaporation	38
B. Cathodic sputtering	45
4. Examples of Epitaxial Film Studies	53
A. Metal films for electrical studies	54
B. Magnetic metal and alloy films	56
C. Semiconductor films	57
D. Chemical and ordering effects in metal and alloy films	62
E. Insulating oxides	64
5. Conclusions	66
References	66

Flash Evaporation

JOHN L. RICHARDS

1. Introduction	71
2. The Flash-evaporation Method	72
A. The evaporation of III-V compounds	72
B. The evaporation of oxides	74
3. Comparison with Other Methods	74
4. Survey of Published Work	75
A. Deposition of perovskites	75
B. Deposition of III-V compounds	77
5. Experimental	77
6. Epitaxy	78
7. Electrical Measurements	79
8. X-Ray Analysis	80
9. Epitaxy of InSb	81
10. Diode Characteristics	82
11. Conclusion	84
References	84
Appendix	85

The Chemical Vapour Deposition of Single-crystal Films

B. A. JOYCE

1. Introduction	87
2. Preparative Methods	88
A. Hydride pyrolysis	89
B. Hydrogen reduction of chlorides	89
C. Halide disproportionation	91
D. Transfer reactions	92
3. Growth Kinetics and Mechanisms	94
A. Reaction kinetics and mechanisms	94
B. Nucleation processes	99
4. Impurity Control and Distribution	100
References	104

Discussion

Film Preparation	107
----------------------------	-----

Part 2. ELECTRON MICROSCOPY AND DIFFRACTION

Some Diffraction Methods for the Study of Epitaxial Layers

H. HOLLOWAY

1. Introduction	111
2. Electron Diffraction	112
A. Applications	112
B. The geometry of electron diffraction	112
C. The occurrence of multiple orientation in epitaxial layers	113
D. Other features	116
3. The Perfection of Epitaxial Layers	118
4. The Choice of Methods for Studying Perfection of Epitaxial Films	119
5. X-Ray Rocking Curves	120
A. General properties	120
B. Application of X-ray rocking curves to epitaxial layers	122
6. Topographic Methods for Epitaxial Semiconductors	126
References	129

Determination of Thin Film Structure and Morphology

M. J. STOWELL

1. Introduction	131
2. Diffraction Contrast	131
3. Theory of Diffraction Contrast	132
A. Kinematical theory	132
B. Dynamical theory	134
C. Moiré patterns	135
D. Kikuchi lines	137
4. Applications	138
A. Angular misorientations in discontinuous deposits	138
B. Three dimensional form of deposit islands	139
C. Stacking faults	139
D. Dislocations	142
E. Twinning	144
5. Conclusions	147
References	148

Low Energy Electron Diffraction

A. U. MAC RAE

1. Introduction	149
2. Equipment	150
3. Diffraction Patterns	153
4. Clean Surfaces	155
5. Structures Formed by Vapor Deposition	156
6. Intensity Analysis	159
7. Summary	160
References	161

The Electron Microscopy of Very Thin Films

D. J. STIRLAND

1. Introduction	163
2. Electron Microscope Considerations	164
A. Specimen visibility	164
B. Resolution	164
C. Contrast	165
3. Changes Occurring During Specimen Preparation	168
A. Shape changes	168
B. Loss and movement of particles	168
C. Atmospheric effects	169
D. Use of replicas	170
4. Changes Occurring During Specimen Examination	170
A. General	170
B. Contamination	170
C. Beam heating	171
D. Ionization effects	172
E. Charge effects	173
5. The Decoration Technique	173
A. Background	173
B. Thin film decoration method	174
C. Applications of the technique	175
6. Orientation of Initial Deposits	178
References	180

Discussion

Electron Microscopy and Diffraction	183
---	-----

Part 3. NUCLEATION AND GROWTH

Nucleation and Growth on Solid Surfaces:
Theory and Application

T. N. RHODIN

1. Role of Nucleation and Growth in the Formation of Films	187
2. Thermodynamic Background	188
3. Formulation of General Nucleation Theory	188
4. Additional Considerations Pertinent to Solid Surfaces	191
A. Thermal accommodation and adsorption	191
B. Surface diffusion and desorption	192
C. Contamination and imperfections	193
5. Theory of Heterogeneous Nucleation Based on an Atomistic Model	193
6. Conclusions	196
A. General theory of heterogeneous nucleation	196
B. Experimental studies	197
C. Nucleation, growth and epitaxy	197
Bibliography	200
References	200

The Application of the Theory of Heterogeneous
Nucleation to Epitaxy

K. L. MOAZED

Summary	203
References	211

Interfacial and Condensation Processes Occurring with
Multicomponent Vapours

KARL-GEORG GÜNTHER

1. Introduction	213
2. General Remarks	214
3. Condensation Phenomena Occurring with Binary Vapours	216
4. Experimental Results	219
A. Condensation of cadmium, selenium and cadmium selenide	221
B. Condensation of components A_{III} , B_V and compounds $A_{III} B_V$	225
C. Condensation of bismuth, tellurium and bismuth telluride	230
5. Summary	231
References	231

Mechanism of Growth of Epitaxial Layers of Silicon

J. D. FILBY, S. NIELSEN and G. J. RICH

1. Introduction	233
2. Preparative Techniques	233
3. Ideal Growth	235
4. Crystal Defects	238
5. Hetero-epitaxy	239
6. Experimental Results	239
References	242

Nucleation and Growth of Metal Films

ROBERT F. ADAMSKY

1. Introduction	243
2. Experimental	244
3. Nucleation and Growth of (100) Oriented Films on Vacuum-cleaved Rock-salt	245
4. Nucleation and Growth in the (111) Orientation on Vacuum-cleaved Mica and on NaCl Films	248
5. Conclusions	251
References	251

Discussion

Nucleation and Growth	253
---------------------------------	-----

Part 4. APPLICATIONS AND PROPERTIES OF THIN FILMS

The Mechanical Properties of Thin Films

R. W. HOFFMAN

1. Introduction	261
2. Stresses in Thin Films	261
A. Experimental	261
B. Thermal expansion	264
C. Intrinsic stress	267
D. Anisotropic stresses	273
3. Tensile Properties	273
A. Experimental	273
B. Structural considerations	274
C. Summary of experimental results	275
D. Models for the strength	277
4. Summary	278
References	279

Discussion

Mechanical Properties of Thin Films	281
---	-----

Dielectric Properties of Thin Films

C. WEAVER

1. Structure of Dielectric Films	283
2. General Dielectric Properties	283
3. Ultra-low Frequency Measurements	288
A. Sodium chloride films	288
B. Sodium bromide films	292
C. Lithium fluoride films	294
4. Single-crystal Films	294
References	296

Discussion

Dielectric Properties of Thin Films	296
---	-----

The Electrical Properties of Single-crystal Metal Films

D. S. CAMPBELL

1. Introduction	299
2. Parameters	299
3. Analysis	302
A. Conduction and resistivity behaviour	302
B. Temperature coefficient behaviour	308
C. Theoretical curves	310
D. Other developments	314
4. Experimental Measurements	314
5. Conclusions	317
References	318

Transport Phenomena in Hetero-epitaxial Semiconductor Films

JAY N. ZEMEL

1. Introduction	319
2. Influence of Surface Scattering on Electrical Conduction	319
A. Intrinsic case	327
B. Extrinsic range	328
3. Influence of Defects Associated with Film Growth on Electrical Conduction	331
4. Diffusion Dislocation and Piping	339
5. Discussion and Summary	343
References	344

Discussion

Electrical Properties of Thin Films	345
---	-----

Use of Thin Films in the Study of Lattice Vibrations

M. BALKANSKI

1. Introduction	347
2. Normal Modes of Vibrations in a Perfect Lattice	348
3. Interaction of the Normal Modes with the Radiation Field	350
4. Selection Rules for Optical Absorption and Raman Scattering	355
5. Localized Surface Modes of Vibrations	358
References	361

Discussion

Use of Epitaxial Films in the Investigation of Lattice Vibrations	362
---	-----

Interband Magneto-optical Studies of Epitaxial Films

DEAN L. MITCHELL

1. Introduction	363
2. Interband Magneto-optical Absorption	364
A. Energy levels in magnetic field	364
B. Magneto-optical spectrum	366
C. Anisotropy and non-parabolicity	367
D. Band parameters	368
3. The $k \cdot p$ Treatment of Energy Levels	369
A. Two-band spherical model	370
Bibliography	372
References	372

Discussion

Interband Magneto-optical Studies	372
---	-----

The Determination of Basic Magnetic Data Using Films

M. PRUTTON

1. Introduction	373
2. The Saturation Magnetization	373
3. Exchange Constants	377
4. Anisotropies	379
A. Magneto-crystalline anisotropy	379
B. Induced uniaxial anisotropy	381
C. Perpendicular anisotropy	382
5. Summary	383
References	383

Domains and Domain Walls in Thin Magnetic Films

S. MIDDELHOEK

1. Introduction	385
2. Domain Walls	386
A. Bloch walls	387
B. Néel walls	390
C. Cross-tie walls	392
D. Domain wall observations	393
3. Magnetization Reversal	394
A. Single domain theory	395
B. Reversal processes in the easy and the hard direction	397
C. Partial rotation	400
D. Wall-creeping	403
Bibliography	406

Discussion

Magnetic Properties of Thin Films	406
---	-----

Optical and Magneto-optical Properties of Films

O. S. HEAVENS

1. Introduction	409
2. Determination of Optical Constants	409
A. Critical angle measurement	412
B. Energy reflectance methods	412
C. Polarimetric methods	413
3. Magneto-optical Properties of Films	414
4. Conclusion	416
References	416

Discussion

Optical and Magneto-optical Properties of Films	417
---	-----

Solubility Studies in Semiconductor Alloy Films

JOHN L. RICHARDS

1. Introduction	419
2. Flash Evaporation of Mixed Powders	421
3. Experimental	422
A. Preparation of the films	422
B. Measurements	423
4. Results	423
A. Phase equilibria studies	423
B. Optical measurements	427
C. Epitaxy	427
5. Discussion	427
A. Vegard's law	427
B. Miscibility	427
6. Conclusions	430
References	431

Discussion

Solubility Studies in Semiconductor Alloy Films	431
---	-----

Alloy Phenomena in Thin Films: Metastable Alloy Phases

S. MADER

1. Introduction	433
A. The vapor quenching process	433
B. Experimental methods	434
2. Occurrence of Metastable Phases	435
A. Extended terminal solubility	435
B. Amorphous structures	436
C. Metastable transition phases	437
D. Influence of substrate temperature and material	438
3. Stability and Transformations of Metastable Phases	440
A. Amorphous phases	440
B. Crystalline metastable phases	442
C. Influence of the equilibrium phase diagram	443
4. Concluding Remarks	444
References	446

Discussion

Alloy Phenomena in Thin Films	446
---	-----
