

# CONTENTS

## PART I—COLLISIONS BETWEEN ELECTRONS AND ATOMS

CHAP.	PAGE
I INTRODUCTION . . . . .	1
The Nuclear Atom. Spectra. The Arrangement of Electrons in Atoms. Excitation and Ionisation. Electron Impact. The Electron-Volt. Critical Potentials. The Photoelectric Effect.	
II CRITICAL POTENTIALS . . . . .	13
Introductory. Lenard's Method. The Method of Franck and Hertz. Improved Lenard Method. The Method of Davis and Goucher. Hertz's Method. Controlled Excitation of Spectra in Stages. Conclusion.	
III PROBABILITY OF EXCITATION . . . . .	25
Transfer of Angular Momentum. The Electrical Method. Spectra of Two-Electron Systems. The Optical Method. Quantum Theory of Excitation.	
IV PROBABILITY OF IONISATION . . . . .	37
Methods in which the Ions are not Resolved. Positive Ion Analysis.	

CHAP.

PAGE

V THE EFFECTIVE CROSS-SECTION OF AN ATOM . . . . . 46

Probability of a Collision. The Mean Free Path of an Electron on the Kinetic Theory. Total Effective Cross-Section or Absorption Coefficient. The Effective Cross-Section for Collision on the Classical and Quantum Theories. The Ramsauer Effect.

VI THE ANGULAR DISTRIBUTION OF THE SCATTERED ELECTRONS . . . . . 58

Elastic Scattering. Inelastic Scattering. The Elastic Cross-Sections. Quantum Theory of Elastic Scattering.

PART II—OTHER COLLISION PROCESSES

VII COLLISIONS BETWEEN PHOTONS AND ATOMS . . . . . 73

Introduction. Photoexcitation. Photoionisation. The Scattering of Photons—Tyndall, Raman, and Compton Effects.

VIII COLLISIONS BETWEEN NORMAL, EXCITED AND IONISED ATOMS . . . . . 84

Collisions of the Second Kind. Sensitised Fluorescence. The Quenching of Resonance Radiation. Ionisation by Positive Ion Impact. Ionisation by Electron Transfer. Mean Free Paths of Positive Ions. Conclusion.
