

CONTENTS

Preface	v
1 Introduction	1
1.1 The computer experiment concept	1
1.2 Defect production computer experiments	3
1.3 Defect annealing computer experiments	3
1.4 Defect property computer experiments	7
1.5 Defect interaction computer experiments	9
1.6 Nature of the book	9
1.7 Plan of the book	10
Appendix A1 Computer experiment utility	11
References	14
2 Computer experiment methods	17
2.1 Introduction	17
2.2 Dynamical method	21
2.2.1 Introduction	21
2.2.2 Central difference approximation	22
2.2.3 A simple dynamical method program	24
2.2.4 Static equilibrium atom position calculations	27
2.2.4.1 Quasidynamical method	27
2.2.4.2 Localized damping method (microconvergence)	27
2.2.5 Critical damping	31
2.2.6 Inelastic atomic collisions	32
2.3 Monte Carlo method	32
2.3.1 Introduction	32
2.3.2 Probabilistic selection	34
2.3.3 Mean square migration distance	36

2.3.4	Defect encounter probability calculations	39
2.3.5	Concurrent migration of many defects	48
2.3.6	Primary radiation particle (PRP) collision chains	52
2.3.7	Frequently used probability functions	54
2.3.7.1	Introduction	54
2.3.7.2	Uniform distribution	54
2.3.7.3	Arbitrary distribution (approximation method)	55
2.3.7.4	Exponential distribution	56
2.3.7.5	Normal distribution	57
2.3.7.6	Maxwell distribution	58
2.3.7.7	Random impact parameter	59
2.3.7.8	Isotropic direction distribution	60
2.4	Variational method	60
	References (ch. 2)	63
Appendix A2.1	Computational cell construction	64
A2.1.1	Introduction	64
A2.1.2	Simple cubic crystal	66
A2.1.3	Body-centered cubic crystal	71
A2.1.4	Face-centered cubic crystal	82
A2.1.5	Hexagonal close-packed crystal	82
Appendix A2.2	Periodic boundary conditions	84
Appendix A2.3	Elastic continuum boundary conditions	91
Appendix A2.4	Thermal crystal initial conditions	95
A2.4.1	Procedure (1)	96
A2.4.2	Procedure (2)	97
A2.4.3	Procedure (3)	97
A2.4.4	Procedure (4)	98
Appendix A2.5	Dynamical method integration schemes	98
A2.5.1	Central difference scheme	98
A2.5.2	Euler–Cauchy scheme	99
A2.5.3	Simple predictor–corrector scheme	99
A2.5.4	Nordsieck method for Newton’s equations	100
A2.5.5	Comparison of the four schemes	101
Appendix A2.6	Time step change in a dynamical method program	101
Appendix A2.7	Force calculations	103
Appendix A2.8	Atom velocity damping at the computational cell boundary	103
Appendix A2.9	Firsov inelastic collision model for dynamical method programs	105
Appendix A2.10	Statistical sampling	106
A2.10.1	Discrete sampling space	106
A2.10.2	Continuous sample space	107

A2.10.3	Statistical sampling using a cdf	107
A2.10.4	Statistical sampling using pdf (rejection technique)	109
Appendix A2.11	Multiply occupied atom sites	110
References (appendix A2)		112
 3	 Outline of defect properties computations	 113
3.1	Introduction	113
3.1.1	Defect types	113
3.1.2	Elemental and compound defects	117
3.1.3	Defect property	117
3.2	Defect energies	118
3.2.1	Configuration and formation energies	119
3.2.2	Migration energy	119
3.2.3	Binding energy	121
3.2.4	Dissociation energy	121
3.3	Configuration energy computation procedure	121
3.4	Migration energy computation procedure	123
3.5	Entropy calculations	123
3.6	Metal models used in defect property example calculations	126
3.7	Neighbor shells in bcc, fcc and hcp crystals	135
3.7.1	Introduction	135
3.7.2	Neighbor shells in a bcc crystal	137
3.7.3	Neighbor shells in a fcc crystal	138
3.7.4	Neighbor shells in a hcp crystal	138
Appendix A3.1	bcc computational cell site maps	141
Appendix A3.2	fcc computational cell site maps	143
Appendix A3.3	hcp computational cell site maps	145
References		159

5.1	Introduction	207
5.2	Self interstitials in bcc iron(m)	209
5.2.1	Introduction	209
5.2.2	Octahedral self interstitial in bcc iron(m)	209
5.2.3	Tetrahedral self interstitial in bcc iron(m)	212
5.2.4	$[110]$ split interstitial in bcc iron(m)	213
5.2.5	$[11\bar{1}]$ split interstitial in bcc iron(m)	216
5.3	Self interstitials in a fcc metal	218
5.3.1	Introduction	218
5.3.2	Octahedral self interstitial in fcc iron(m)	222
5.3.3	Octahedral self interstitial in nickel(m)	224
5.3.4	Tetrahedral self interstitial in fcc iron(m)	224
5.3.5	Tetrahedral self interstitial in nickel(m)	235
5.3.6	$[100]$ split self interstitial in fcc iron(m)	235
5.3.7	$[100]$ split self interstitial in nickel(m)	237
5.3.8	$[110]$ axis self interstitial in fcc iron(m)	243
5.3.9	$[110]$ axis interstitial in nickel(m)	251
5.3.10	$[111]$ split interstitial in fcc iron(m)	253
5.3.11	$[111]$ split interstitial in nickel(m)	259
5.3.12	$(1\bar{1}\bar{1})_p$ interstitial in fcc iron(m)	262
5.4	Self interstitials in the hcp metal(m)	265
5.4.1	Introduction	265
5.4.2	Point A split self interstitial	277
5.4.3	Octahedral self interstitial (point B)	284
5.4.4	C-axis split interstitial (point C)	290
5.4.5	Point D split self interstitial	291
5.4.6	Symmetrical point E interstitial	297

5.4.7	Asymmetrical point E interstitial	301
	References	315
6	Impurity atoms	317
6.1	Introduction	317
6.2	Substitutional metallic large impurity atom (LIA)	317
6.2.1	LIA(m) in bcc iron(m)	317
6.2.2	LIA(m) in nickel(m)	319
6.2.3	LIA(m) in fcc iron(m)	320
6.2.4	LIA(m) in the hcp metal(m)	321
6.3	Substitutional metallic small impurity atom (SIA)	322
6.3.1	SIA(m) in bcc iron(m)	322
6.3.2	SIA(m) in nickel(m)	322
6.3.3	SIA(m) in fcc iron(m)	323
6.3.4	SIA(m) in the hcp metal(m)	324
6.4	Helium	325
6.4.1	Introduction	325
6.4.2	Helium(m) in bcc iron(m)	329
6.4.2.1	Octahedral interstitial helium(m)	329
6.4.2.2	Tetrahedral interstitial helium(m)	330
6.4.2.3	Hybrid [111] split interstitial	331
6.4.2.4	Hybrid [110] split interstitial	331
6.4.2.5	Substitutional helium(m)	333
6.4.3	Helium(m) in nickel(m)	337
6.4.3.1	Octahedral interstitial helium(m)	337
6.4.3.2	Tetrahedral interstitial helium(m)	338
6.4.3.3	Activated crowdion interstitial helium(m)	339
6.4.3.4	Substitutional helium(m)	339
6.4.4	Helium(m) in fcc iron(m)	343
6.4.4.1	Octahedral interstitial helium(m)	343
6.4.4.2	Tetrahedral interstitial helium(m)	344
6.4.4.3	Activated crowdion interstitial helium(m)	347
6.4.4.4	Substitutional helium(m)	348
6.4.5	Helium(m) in the hcp metal(m)	350
6.4.5.1	Octahedral helium(m)	350
6.4.5.2	Tetrahedral interstitial helium(m)	351
6.4.5.3	Point E interstitial helium(m)	351
6.4.5.4	Substitutional helium(m)	353
6.5	Carbon	355
6.5.1	Introduction	355
6.5.2	Interstitial carbon(m) in bcc iron(m)	356
6.5.2.1	Octahedral interstitial carbon atom	356
6.5.2.2	Tetrahedral interstitial carbon(m) atom in bcc iron(m)	359
6.5.3	Interstitial carbon(m) in nickel(m)	359
6.5.3.1	Octahedral interstitial carbon(m) in nickel(m)	360

6.5.3.2	Tetrahedral interstitial carbon(m) atom	362
6.5.4	Interstitial carbon(m) in fcc iron(m)	363
6.5.4.1	Octahedral interstitial carbon(m)	363
6.5.4.2	Tetrahedral interstitial carbon(m)	363
6.5.5	Carbon(m) in the hcp metal(m)	365
6.5.5.1	Octahedral interstitial carbon(m)	365
6.5.5.2	Point D interstitial carbon	367
6.5.5.3	Point A interstitial carbon	369
6.5.5.4	Points C and E interstitial carbon	370
6.6	Carbon(m)–vacancy and carbon(m)–interstitial complexes	373
6.6.1	Carbon(m)–vacancy complexes in bcc iron(m)	373
6.6.2	Carbon(m)–interstitial complexes in bcc iron(m)	377
6.6.3	Carbon(m)–vacancy complexes in nickel(m)	379
6.6.4	Carbon(m)–self interstitial complexes in nickel(m)	385
6.6.5	Effect of carbon(m) on Frenkel pair production in nickel(m)	386
6.6.6	Carbon(m)–vacancy complexes in fcc iron(m)	387
6.6.7	Carbon(m)–interstitial complexes in fcc iron(m)	388
6.6.8	Carbon complexes in a hcp metal	388
6.7	Helium complexes	388
6.7.1	Introduction	388
6.7.2	Helium–vacancy complexes in tungsten(m1)	388
6.7.3	Helium–vacancy complexes in molybdenum	390
6.7.4	Helium interactions with an edge dislocation	392
6.7.5	Helium(m)–vacancy complexes in bcc iron(m)	393
6.7.6	Helium(m)–interstitial complexes in bcc iron(m)	394
6.7.7	Helium(m)–vacancy complexes in nickel(m)	396
6.7.7.1	He(m)–V ₂ (1) in nickel(m)	397
6.7.7.2	He(m)–V ₃ (111) in nickel(m)	400
6.7.7.3	He ₂ [100]–V ₁ in nickel(m)	400
6.7.8	Helium–vacancy complexes in copper	402

15.2	HVEM electron irradiation at 0K	832
15.3	HVEM electron irradiation at 136K	837
15.4	HVEM electron irradiation at $T > 136\text{K}$	840
16	Self-ion irradiation	843
16.1	Introduction	843
16.2	Spatial distribution of PKA ejection sites	843
16.3	Vacancy extent	849
16.4	PKA energy spectrum: MeV energy range self-atom irradiation	851
16.5	Damage energy fraction	854
16.6	Damage energy transport	856
16.7	Comparison with LSS theory	860
16.8	Short-term annealing of 4 MeV self-atom displacement spike ensembles in fcc iron(FEV)	861
16.8.1	Average-range primary atom cascades	861
16.8.2	Short- and long-range primary atom cascades	871
	References	872
