

## CONTENTS

1. INTRODUCTION .....	1
2. DEFINITIONS AND PRINCIPLES OF METHODS OF MEASUREMENT .....	3
2.1. Definitions .....	3
2.2. Measurement of thermal conductivity .....	3
2.2.1. Steady-state methods .....	5
2.2.2. Non-steady-state methods.....	7
2.2.3. The temperature range of thermal-conductivity measurements	9
3. GENERAL BEHAVIOUR OF THE THERMAL CONDUCTIVITY OF METALS AND OF NON-METALLIC CRYSTALS .....	11
3.1. Metals .....	11
3.2. Non-metallic crystals .....	13
3.3. Comparison between metals and non-metals .....	14
4. PHONONS AND THE BOLTZMANN EQUATION .....	16
4.1. Phonons .....	16
4.1.1. Vibrations of a discrete lattice.....	16
4.1.2. Quantization of vibrational energy .....	19
4.2. The Boltzmann equation.....	20
4.2.1. The relaxation-time method .....	21
4.2.2. The variational method .....	23
5. NORMAL AND UMKLAPP PROCESSES .....	29
5.1. Phonon-phonon interactions.....	29
5.1.1. Normal and Umklapp processes .....	30
5.2. The effect of N-processes .....	32
6. TAKING ACCOUNT OF NORMAL PROCESSES.....	36
6.1. The relaxation-time method.....	36
6.1.1. Resistive processes dominant.....	37
6.1.2. Resistive processes present, but N-processes dominant .....	38
6.1.3. Only N-processes acting .....	39
6.2. The variational method .....	40
6.2.1. Resistive processes and N-processes both important .....	40
6.2.2. Resistive processes present, but N-processes dominant .....	42
6.3. The method of Guyer and Krumhansl.....	43
7. THE THERMAL CONDUCTIVITY OF NEARLY PERFECT NON-METALLIC CRYSTALS .....	45
7.1. U-processes .....	45
7.1.1. High temperatures .....	46
7.1.2. Low temperatures.....	56
7.2. Boundary scattering .....	61
7.3. Poiseuille flow of phonons .....	69

<b>8. THE THERMAL CONDUCTIVITY OF IMPERFECT CRYSTALS . . . . .</b>	<b>73</b>
8.1. Phonon scattering by defects .....	73
8.1.1. Point defects.....	73
8.1.2. Larger defects .....	76
8.1.3. Dislocations .....	77
8.2. Combining intrinsic and defect scattering rates.....	79
8.2.1. Dominant phonon method.....	80
8.2.2. The 'Debye approximation'.....	81
8.2.3. The variational method .....	82
8.3. Thermal conductivity of crystals containing defects .....	82
8.3.1. Non-resonant point defects .....	83
8.3.2. Resonant scattering.....	91
8.3.3. Larger defects.....	99
8.3.4. Dislocations .....	101
<b>9. AMORPHOUS SOLIDS.....</b>	<b>104</b>
9.1. General behaviour of the conductivity.....	104
9.2. The 'high'-temperature behaviour.....	109
9.3. The conductivity at very low temperatures .....	110
<b>10. ELECTRONS.....</b>	<b>115</b>
10.1. Drude theory of conductivity.....	116
10.2. Electrons in metals .....	117
10.2.1. Free electrons .....	117
10.2.2. Electrons in a crystal lattice .....	120
10.2.3. Metals, insulators, and semiconductors.....	121
10.3. Conduction by electrons .....	123
10.4. Conditions for the validity of the Wiedemann–Franz–Lorenz law .....	125
<b>11. ELECTRON SCATTERING.....</b>	<b>128</b>
11.1. Phonon-electron scattering .....	128
11.2. The temperature variations of the resistivities .....	134
11.2.1. The 'ideal' electrical resistivity .....	134
11.2.2. The 'ideal' electronic thermal resistivity .....	134
11.2.3. The phonon thermal resistivity due to electron scattering .....	135
11.3. Some corrections to the simple theory .....	136
11.3.1. Electron–phonon U-processes .....	136
11.3.2. Electron–electron scattering.....	137
11.3.3. Electron–phonon scattering when the electron mean free path is small .....	138
11.4. Scattering by defects .....	140
<b>12. THERMAL CONDUCTIVITY OF METALS AND ALLOYS .....</b>	<b>143</b>
12.1. Pure metals .....	143
12.1.1. Estimates of the lattice component .....	144
12.1.2. The electronic component .....	145
12.2. Alloys.....	151
12.2.1. The electronic contribution .....	152
12.2.2. The lattice conductivity in metals and alloys .....	154
12.2.3. The dependence of lattice conductivity on electron mean free path.....	158
12.2.4. The influence of dislocations on the lattice conductivity of alloys .....	161
12.3. Superconductors .....	164

**CONTENTS**

xi

<b>13. SEMICONDUCTORS.....</b>	<b>169</b>
13.1. Pure intrinsic semiconductors.....	169
13.2. Impure semiconductors .....	174
13.2.1. Semiconductor alloys.....	174
13.2.2. Doped semiconductors .....	175
